Driving Mechanisms for the Earth's Dynamo

D. GUBBINS AND T. G. MASTERS

1. Introduction	1
2. Physical and Chemical Properties of the Earth's Core	3
3. Conservation Laws	16
4. Power Sources for the Magnetic Field	21
5. Implications of the Dynamics and Chemistry of the Core	36
6. Summary	41
List of Symbols	43
References	44

Flexure

DONALD L. TURCOTTE

1. Introduction	51
2. Governing Equations	52
3. Lithospheric Buckling	54
4. Flexure with End Loading	55
5. Compensation of Loads	62
6. Axisymmetric Bending	66
7. Viscoelastic Flexure	70
8. Stress Relaxation	73
9. Plastic Yielding during Flexure	75
10. Conclusions	82
List of Symbols	83
References	84

The Influence of Mountains on the Atmosphere

RONALD B. SMITH

1. An Introduction to Mountain Effects	87
2. The Flow over Hills and the Generation of Mountain Waves	89
3. The Flow near Mesoscale and Synoptic-Scale Mountains	142
4. Orographic Control of Precipitation	169
5. Planetary-Scale Mountain Waves	195
References	217

Climatic Effects of Cirrus Clouds**KENNETH P. FREEMAN AND KUO-NAN LIOU**

1. Introduction	231
2. Review of Previous Work	233
3. Radiative Transfer in the Atmosphere	237
4. Heat and Radiation Budgets of the Atmosphere	251
5. Effects of Increased Cirrus Cloudiness	272
6. Concluding Remarks	283
References	284

Spectral Energetics of the Troposphere and Lower Stratosphere**KIICHI TOMATSU**

1. Introduction	289
2. Governing Equations	292
3. Data Sources and Procedure of Analysis	304
4. Zonal Mean Climatology of Basic Fields	305
5. Spatial Energetics	313
6. Spectral Energetics	337
7. Potential Energy Generation and Kinetic Energy Dissipation Calculated as Residuals	356
8. The Complete Energy Cycle	362
Appendix. Tables of Basic Calculations	367
List of Symbols	400
References	401
 SUBJECT INDEX	407

DRIVING MECHANISMS FOR THE EARTH'S DYNAMO

D. GUBBINS

*Department of Geodesy and Geophysics
Cambridge University
Madingley Rise
Cambridge, United Kingdom*

AND

T. G. MASTERS

*Institute of Geophysics and Planetary Physics
University of California at San Diego
La Jolla, California*

1. Introduction	1
2. Physical and Chemical Properties of the Earth's Core	3
2.1 Evidence from Seismology	3
2.2 Shock-Wave Data and Core Composition	7
2.3 The Thermal Regime	12
3. Conservation Laws	16
3.1 Local Equations	16
3.2 Global Energy Balance	18
3.3 Global Entropy Balance	20
3.4 Relating the Magnetic Field Strength to the Power Supply	21
4. Power Sources for the Magnetic Field	21
4.1 Radioactive Heating	21
4.2 Primordial Heat and Freezing of the Inner Core	23
4.3 Gravitational Energy Release	24
4.4 Chemical Effects	29
4.5 Rotational Energy: the Precessional and Tidal Forcing	31
4.6 Other Effects	35
5. Implications of the Dynamics and Chemistry of the Core	36
5.1 Results from Dynamo Theory	37
5.2 Freezing of the Liquid in the Outer Core	38
5.3 Boundary Layers	40
5.4 Effects of Stable Density Stratification	40
6. Summary	41
List of Symbols	43
References	44

FLEXURE

DONALD L. TURCOTTE

*Department of Geological Sciences
Cornell University
Ithaca, New York*

1. Introduction	51
2. Governing Equations	52
3. Lithospheric Buckling	54
4. Flexure with End Loading	55
4.1 Theory	55
4.2 Ocean Trenches	59
4.3 Hawaiian Islands	60
4.4 Passive Continental Margins	61
4.5 Thickness of the Elastic Lithosphere	61
5. Compensation of Loads	62
6. Axisymmetric Bending	66
6.1 Theory	66
6.2 Islands and Seamounts	67
6.3 Circular Sedimentary Basins	67
6.4 Crustal Domes	69
6.5 Flexure of the Lithosphere on the Moon and Mars	70
7. Viscoelastic Flexure	70
7.1 Theory	70
7.2 Application to Ocean Trenches	71
7.3 Application to Sedimentary Basins	72
7.4 Time Dependence of the Thickness of the Elastic Lithosphere	73
8. Stress Relaxation	73
9. Plastic Yielding during Flexure	75
10. Conclusions	82
List of Symbols	83
References	84

THE INFLUENCE OF MOUNTAINS ON THE ATMOSPHERE

RONALD B. SMITH

*Department of Geology and Geophysics
Yale University
New Haven, Connecticut*

1. An Introduction to Mountain Effects	87
2. The Flow over Hills and the Generation of Mountain Waves	89
2.1 Buoyancy Forces	90
2.2 The Theory of Two-Dimensional Mountain Waves	92
2.3 Observations of Mountain Waves	117
2.4 The Three-Dimensional Flow over Isolated Hills	121
2.5 Large-Amplitude Mountains and Blocking	128
2.6 The Observed Barrier Effect of Mountains—The Föhn and Bora	134
2.7 The Influence of the Boundary Layer on Mountain Flows	135
2.8 Slope Winds and Mountain and Valley Winds	137
3. The Flow near Mesoscale and Synoptic-Scale Mountains	142
3.1 Quasi-geostrophic Flow over a Mountain	143
3.2 The Effect of Inertia on the Flow over Mesoscale Mountains	153
3.3 Theories of Lee Cyclogenesis	163
4. Orographic Control of Precipitation	169
4.1 Observations of Rainfall Distribution	169
4.2 The Mechanism of Upslope Rain	173
4.3 The Redistribution of Rainfall by Small Hills	192
4.4 Orographic-Convective Precipitation	193
5. Planetary-Scale Mountain Waves	195
5.1 A Vertically Integrated Model of Topographically Forced Planetary Waves	197
5.2 The Vertical Structure of Planetary Waves on a β -Plane between Bounding Latitudes	201
5.3 Models of Stationary Planetary Waves Allowing Meridional Propagation and Lateral Variation in the Background Wind	209
References	217

CLIMATIC EFFECTS OF CIRRUS CLOUDS

KENNETH P. FREEMAN¹ AND KUO-NAN LIOU

*Department of Meteorology
University of Utah
Salt Lake City, Utah*

1. Introduction	231
2. Review of Previous Work	233
3. Radiative Transfer in the Atmosphere	237
3.1 Method of Radiative Transfer	238
3.2 Solar Radiation	240
3.3 Terrestrial Thermal Radiation	247
4. Heat and Radiation Budgets of the Atmosphere	251
4.1 Climatology Data	251
4.2 Solar Heating	252
4.3 Thermal Cooling	253
4.4 The Net Heat Budget	257
4.5 The Radiation Budget	261
4.6 Comparison with Previous Models	268
5. Effects of Increased Cirrus Cloudiness	272
6. Concluding Remarks	283
References	284

SPECTRAL ENERGETICS OF THE TROPOSPHERE AND LOWER STRATOSPHERE

KIICHI TOMATSU

*Forecast Research Laboratory
The Meteorological Research Institute
Tokyo, Japan*

1. Introduction	289
2. Governing Equations	292
2.1 Fundamental Relations	292
2.2 Computation of ω	293
2.3 Fourier Expansion	295
2.4 Spectral Energy Equations	296
2.5 Spatial Energetics	300
3. Data Sources and Procedure of Analysis	304
4. Zonal Mean Climatology of Basic Fields	305
4.1 Wind and Temperature	305
4.2 Vertical Velocity	307
4.3 Static Stability	308
4.4 Horizontal Transports of Momentum and Sensible Heat	308
5. Spatial Energetics	313
5.1 Annual Variations	313
5.2 Vertical Profiles of Annual and Winter Mean Integrands	322
5.3 Latitude-Height Distribution of Integrands	325
6. Spectral Energetics	337
6.1 The Overall Energy Flow	340
6.2 The Vertical Pressure Interaction and Its Convergence	345
6.3 Nonlinear Exchange of Energy	348
6.4 Power Law Representation of the Kinetic Energy Spectrum	352
7. Potential Energy Generation and Kinetic Energy Dissipation Calculated as Residuals	356
7.1 Generation of Available Potential Energy	356
7.2 Dissipation of Eddy Kinetic Energy	359
8. The Complete Energy Cycle	362
8.1 The Troposphere	363
8.2 The Stratosphere	364
Appendix. Tables of Basic Calculations	367
List of Symbols	400
References	401
