Thermal Evolution of the Earth: Some Recent Developments

NORMAN H. SLEEP AND ROBERT T. LANGAN

1. Introduction	1
2. Thermal History Models	3
3. Core Formation.....	14
4. Conclusions and Future Work.....	19
References	20

Experimental Methods of Rock Magnetism and Paleomagnetism

SUBIR K. BANERJEE

1. Introduction.....	25
2. Natural Remanent Magnetization.....	29
3. Artificial or Laboratory-Imparted Remanent Magnetizations	56
4. Parameters Measured in the Presence of a Field.....	76
5. Future Trends.....	92
References	95

Circulation in the Coastal Ocean

G. T. CSANADY

1. Introduction.....	101
2. Wind-Driven Transient Currents.....	103
3. Upwelling, Downwelling, and Coastal Jets	119
4. Trapped Waves and Propagating Fronts.....	126
5. Steady Currents	139
6. Conclusion	176
References	177

Mesoscale Numerical Modeling

ROGER A. PIELKE

1. Introduction	186
2. Basic Set of Equations	187
3. Simplification of the Basic Equations	189
4. Averaging the Conservation Relations.....	198

5. Types of Models	204
6. Coordinate Representation	221
7. Planetary Boundary-Layer Parameterization.....	226
8. Radiation Parameterization	239
9. Moist Thermodynamics	248
10. Methods of Solution	253
11. Boundary and Initial Conditions.....	269
12. Model Evaluation.....	285
13. Examples of Mesoscale Models	290
14. Conclusions	317
References	321

**The Predictability Problem: Effects of Stochastic Perturbations
in Multiequilibrium Systems**

RICHARD E. MORITZ AND ALFONSO SUTERA

1. Introduction.....	345
2. The Predictability Problem	347
3. Prototype Model and Mathematical Concepts	349
4. Computational Techniques	359
5. Numerical Results	360
6. Concluding Remarks	374
Appendix	376
References	381
INDEX	385

THERMAL EVOLUTION OF THE EARTH: SOME RECENT DEVELOPMENTS

NORMAN H. SLEEP

*Department of Geophysics
Stanford University
Stanford, California*

AND

ROBERT T. LANGAN

*Department of Civil Engineering
Northwestern University
Evanston, Illinois*

1.	Introduction	1
2.	Thermal History Models	3
2.1.	Kinematic Convective Models	5
2.2.	Parameterized Convection	6
2.3.	Stratified Convection	11
2.4.	Discussion of Thermal Modeling	13
3.	Core Formation	14
3.1.	Timing of Core Formation	15
3.2.	Mechanism of Core Formation	15
3.3.	Ferric Iron and Water in Mantle	18
4.	Conclusions and Future Work	19
	References	20

EXPERIMENTAL METHODS OF ROCK MAGNETISM AND PALEOMAGNETISM*

SUBIR K. BANERJEE

Department of Geology and Geophysics

University of Minnesota

Minneapolis, Minnesota

1. Introduction	25
2. Natural Remanent Magnetization	29
2.1. Static Samples	31
2.2. Rotating Samples	36
2.3. Ballistic and Resonance Magnetometers	41
2.4. Selective Demagnetization or "Cleaning" Methods	43
3. Artificial or Laboratory-Imparted Remanent Magnetizations	56
3.1. Viscous Remanent Magnetization	56
3.2. Isothermal Remanent Magnetization	60
3.3. Anhysteretic Remanent Magnetization	63
3.4. Thermoremanent Magnetization	68
4. Parameters Measured in the Presence of a Field	76
4.1. Magnetic Susceptibility	76
4.2. Hysteresis Parameters	81
4.3. Thermomagnetic Properties	83
4.4. Magnetocrystalline Anisotropy and Magnetostriction	87
4.5. Magnetic Domain Structure	91
5. Future Trends	92
5.1. Studies on Single Grains	93
5.2. Comprehensive Instruments	94
5.3. Continuous Measurement of Long Cores	94
5.4. On-Line Signal Processing	95
References	95

CIRCULATION IN THE COASTAL OCEAN*

G. T. CSANADY

*Woods Hole Oceanographic Institution
Woods Hole, Massachusetts*

1.	Introduction	101
2.	Wind-Driven Transient Currents	103
2.1.	Quasi-Geostrophic Model	104
2.2.	Coastal Constraint	105
2.3.	Velocity Distribution	106
2.4.	Longshore Pressure Gradients	108
2.5.	Comparison with Observation—Great Lakes	110
2.6.	Pacific Type Continental Shelves	115
3.	Upwelling, Downwelling, and Coastal Jets	119
3.1.	Response of Stratified Water Column to Wind	119
3.2.	Coastal Jet Generation	121
3.3.	Large Pycnocline Movements	122
3.4.	Comparison with Observation	124
4.	Trapped Waves and Propagating Fronts	126
4.1.	Linear Theory Models	127
4.2.	Surface Fronts	130
4.3.	Observational Evidence on Wave and Front Propagation	133
5.	Steady Currents	139
5.1.	Frictional Adjustment	141
5.2.	Vorticity Tendencies	143
5.3.	Steady Parallel Flow over a Straight Continental Shelf	147
5.4.	Shelf Circulation as a Boundary-Layer Problem	149
5.5.	Thermohaline Circulation	155
5.6.	Mean Circulation of a Stratified Fluid	159
5.7.	Mean Circulation of the Mid-Atlantic Bight	162
5.8.	Storm Currents over Atlantic Type Shelves	166
5.9.	Mean Circulation in Lake Ontario	170
5.10.	Mean Summer Circulation over the Oregon Shelf	174
6.	Conclusion	176
	References	177

MESOSCALE NUMERICAL MODELING

ROGER A. PIELKE

*Department of Environmental Sciences
University of Virginia
Charlottesville, Virginia*

1.	Introduction	186
2.	Basic Set of Equations	187
3.	Simplification of the Basic Equations	189
3.1	Conservation of Mass Approximation	190
3.2	Conservation of Heat, Water, and Other Gaseous and Aerosol Material Approximations	191
3.3	Conservation of Motion Approximations	191
4.	Averaging the Conservation Relations	198
5.	Types of Models	204
5.1	Physical Models	204
5.2	Linear Models	209
6.	Coordinate Representation	221
7.	Planetary Boundary-Layer Parameterization	226
7.1	Laminar Sublayer	226
7.2	The Surface Layer	227
7.3	The Transition Layer	231
8.	Radiation Parametrization	239
8.1	Short-Wave Radiation	241
8.2	Long-Wave Radiation	245
9.	Moist Thermodynamics	248
9.1	Convectively Stable Atmosphere	248
9.2	Convectively Unstable Atmosphere	249
9.3	Types of Parameterizations	250
10.	Methods of Solution	253
10.1	Advection Terms	255
10.2	Diffusion Terms	261
10.3	Other Terms	262
10.4	Other Calculations	264
10.5	Nonlinear Effects	265
11.	Boundary and Initial Conditions	269
11.1	Grid and Domain Structure	269
11.2	Grid Staggering	272
11.3	Initialization	272
11.4	Initialization with Sparse Data	274
11.5	Spatial Boundaries	276
12.	Model Evaluation	285
12.1	Kinetic Energy Evaluation	286
12.2	Observational Validation	288
12.3	Model Intercomparisons	289
12.4	Model Logic	290
13.	Examples of Mesoscale Models	290
13.1	Terrain-Induced Mesoscale Systems	291
13.2	Synoptically-Induced Mesoscale Systems	313
14.	Conclusions	317
	References	321
