Structure of the Core and Lower Mantle

DAVID E. LOPER

1. Introduction	1
2. Dynamo Energetics	4
3. Structure of the Outer Core	6
4. Structure of the Inner Core	12
5. Structure of D''	15
6. Structure of Deep-Mantle Plumes	19
7. Thermal History of the Earth	21
8. Summary	24
Appendix. Energy Available from Gravitational Separation	25
References	27

Pre-Pleistocene Paleoclimates: The Geological and Paleontological Evidence; Modeling Strategies, Boundary Conditions, and Some Preliminary Results

CHRISTOPHER R. LLOYD

1. Introduction	36
2. Paleoclimatic Indicators	39
3. Pre-Pleistocene Paleoclimates and Paleoceanography	52
4. Forcing Mechanisms in Long-Term Climatic Change	74
5. Boundary Conditions for Paleoclimatic Modeling	80
6. Paleoclimatic Modeling Strategies	101
7. A Survey of Paleoclimatic Modeling Results	108
8. Summary	120
References	124

Climate Model Simulations of CO₂-Induced Climatic Change

MICHAEL E. SCHLESINGER

1. Introduction	141
2. Mathematical Climate Models	143
3. Comparison of Model Simulations of CO ₂ -Induced Climatic Change ..	152
4. Discussion	216
5. Conclusions and Recommendations	228
References	230

Retrieval of Worldwide Precipitation and Allied Parameters from Satellite
Microwave Observations

MIRLE S. V. RAO

1. Introduction	238
2. The ESMR System.	241
3. Conversion of Brightness Temperature to Rain Rate: A Theoretical Approach	246
4. Verification with Radar Data	249
5. Verification by a Specially Designed Experiment	252
6. Generation of Oceanic Rainfall Maps.	257
7. Intercomparison.	268
8. Analysis of Rainfall Maps.	276
9. New Features of Global Climatology Revealed by ESMR Rainfall Studies.	290
10. Periodic Variations of Precipitation in the Tropical Atlantic Ocean.	297
11. Ice Mapping	304
12. Storm Structure Studies	308
13. Qualitative Estimation of Rainfall Over Land Areas.	311
14. Retrieval of Other Geophysical Parameters	317
15. Conclusion	325
Appendix. Explanatory Notes	330
References.	331

PRE-PLEISTOCENE PALEOCLIMATES: THE GEOLOGICAL AND PALEONTOLOGICAL EVIDENCE; MODELING STRATEGIES, BOUNDARY CONDITIONS, AND SOME PRELIMINARY RESULTS

CHRISTOPHER R. LLOYD*

*Climatic Research Institute
Oregon State University
Corvallis, Oregon*

1.	Introduction	36
2.	Paleoclimatic Indicators	39
2.1.	Introduction	39
2.2.	Qualitative Paleoclimatic Evidence	39
2.3.	Quantitative Paleoclimatic Evidence	45
3.	Pre-Pleistocene Paleoclimates and Paleoceanography.	52
3.1.	Introduction	52
3.2.	Overview: Major Glacial and Nonglacial Epochs	53
3.3.	The Mid-Cretaceous Climate	54
3.4.	The Late Cretaceous to Late Tertiary Cooling Trend	61
4.	Forcing Mechanisms in Long-Term Climatic Change	74
4.1.	Introduction	74
4.2.	Changes in Factors External to the Earth	75
4.3.	Changes in Terrestrial Forcing External to the Ocean/Atmosphere/Biosphere System	75
4.4.	Factors Internal to the Ocean/Atmosphere/Biosphere System	77
4.5.	Comments	77
5.	Boundary Conditions for Paleoclimatic Modeling	80
5.1.	Introduction	80
5.2.	Paleogeography.	80
5.3.	Sea Surface Temperature and Ocean Circulation	86
5.4.	Other Boundary Conditions.	92
6.	Paleoclimatic Modeling Strategies	101
6.1.	Introduction	101
6.2.	Summary of Boundary Conditions	102
6.3.	Statistical-Dynamical Models	102
6.4.	General Circulation Models.	103
6.5.	Snapshot and Sensitivity Experiments.	106
6.6.	Comparison of Model Results with Paleoclimatic Evidence	107
7.	A Survey of Paleoclimatic Modeling Results	108
7.1.	Introduction	108
7.2.	Results of Snapshot Simulations	109
7.3.	Results of Sensitivity Experiments	115
8.	Summary	120
	References	124

* Present address: Geophysical Fluid Dynamics Laboratory, Princeton University, Princeton, New Jersey 08540.

CLIMATE MODEL SIMULATIONS OF CO₂-INDUCED CLIMATIC CHANGE

MICHAEL E. SCHLESINGER

*Department of Atmospheric Sciences
and
Climatic Research Institute
Oregon State University
Corvallis, Oregon*

1. Introduction	141
2. Mathematical Climate Models.	143
2.1. Energy Balance Models (EBMs)	144
2.2. Radiative–Convective Models (RCMs)	144
2.3. General Circulation Models (GCMs)	145
3. Comparison of Model Simulations of CO ₂ -Induced Climatic Change	152
3.1. Description of GCMs and CO ₂ Simulations	158
3.2. Simulated Temperature Changes.	165
3.3. Simulated Precipitation Changes.	191
3.4. Simulated Soil Moisture Changes	206
4. Discussion	216
4.1. Model-Dependent Results	217
4.2. Time Required to Reach Equilibrium	219
4.3. Statistical Significance	222
5. Conclusions and Recommendations	228
References	230

RETRIEVAL OF WORLDWIDE PRECIPITATION AND ALLIED PARAMETERS FROM SATELLITE MICROWAVE OBSERVATIONS

MIRLE S. V. RAO

*7223 North Olney Street
Indianapolis, Indiana*

1.	Introduction	238
2.	The ESMR System.	241
	2.1. Nimbus-5 ESMR	241
	2.2. Nimbus-6 ESMR	241
	2.3. What the Instrument Measures	242
	2.4. Factors Contributing to the Observed Brightness Temperature	243
	2.5. The Suitability of ESMR for Rainfall Estimation	245
3.	Conversion of Brightness Temperature to Rain Rate: A Theoretical Approach	246
4.	Verification with Radar Data.	249
5.	Verification by a Specially Designed Experiment	252
6.	Generation of Oceanic Rainfall Maps	257
	6.1. Sources of Error	257
	6.2. Error Analysis	262
	6.3. Steps in Writing the Program	262
7.	Intercomparison.	268
8.	Analysis of Rainfall Maps	276
9.	New Features of Global Climatology Revealed by ESMR Rainfall Studies.	290
	9.1. Characteristics of the ITCZ in the Pacific	290
	9.2. Previously Unrecognized Rain Area in the South Atlantic.	293
	9.3. Bimodal Behavior and Other Features of Rainbelts in the Indian Ocean	294
	9.4. Interannual Variation	295
	9.5. Low Southern Hemispheric Rain	296
	9.6. Periodical Variation	297
10.	Periodic Variations of Precipitation in the Tropical Atlantic Ocean	297
	10.1. Main Study	297
	10.2. Comparison with Other Results	302
	10.3. Models and Hypotheses	303
	10.4. Another Interesting Oscillation	303
	10.5. Conclusion	304
11.	Ice Mapping	304
	11.1. General.	304
	11.2. Bulk-Emitting Media—Effective Physical Temperature.	304
	11.3. Satellite Study	306
	11.4. Results	307
12.	Storm Structure Studies.	308
	12.1. General.	308
