CONTENTS

CONTRIBUTORS ix
FOREWORD xiii
PREFACE xv

1. Introduction

JOHN W. SHERMAN, III

1. Purpose and Scope 1
2. Historical Background 1
3. Approach and Organization 8
References 9

2. The 1978 Oceanic Trilogy: Seasat, Nimbus-7, and TIROS-N

JOHN W. SHERMAN, III

1. Introduction 11
2. The Seasat Sensors and Results 12
3. The Nimbus-7 Sensors and Results 47
4. The TIROS-N Series and Results 52
5. Summary 56
References 59

3. Analysis and Interpretation of Altimeter Sea Echo

DONALD E. BARRICK AND BELINDA J. LIPA

1. Introduction 61
2. The Convolutional Representation of the Signal and Its Use 62
3. Model Fits of Recovered Sea Surface Probability Density 68
4. The Study of Altimetric Biases Using Models 73
5. Electromagnetic Bias 86
6. A General, Improved Deconvolution Algorithm 93
7. Conclusions 96
Appendix 97
References 99

4. Oceanic Surface Winds

DUNCAN B. ROSS, VINCENT J. CARDONE, JAMES OVERLAND, RONALD D. MCPHERSON, WILLARD J. PIERSON, JR., AND TSANN-WANG YU

1. Introduction 101
2. Mechanism for Measurement of Surface Wind Speed Using Microwave Systems 103
3. The Marine Surface Boundary Layer 105
4. Development of a Model Function Relating SASS Data to Surface Wind Speed 109
5. Global Data Assimilation Experiments 121
6. Conclusions 137
References 138

5. Surface and Internal Ocean Wave Observations

C. L. RUFENACH, L. S. FEDOR, J. R. APEL, AND F. I. GONZALEZ

1. Introduction 141
2. Ocean Surface Waves 142
3. Ocean Internal Waves 176
4. Summary and Conclusions 192
References 193

6. Seasat Microwave Wind and Rain Observations in Severe Tropical and Midlatitude Marine Storms

PETER G. BLACK, R. CECIL GENTRY, VINCENT J. CARDONE, AND JEFFREY D. HAWKINS

1. Introduction 198
2. The Nature of Severe Marine Storms 200
3. Microwave Measurements in Severe Marine Storms 206
4. Seasat Observations of Rain Rate and Microwave Attenuation in Tropical Cyclones 208
5. Seasat Surface Wind Observations in Tropical Cyclones 215
6. Analysis of Individual Storms and Comparison of Seasat Data with "Surface-Truth" Data 218
7. Seasat Observations of Sea Surface Temperature Near Tropical Cyclones 264
8. Application of Seasat Observations to Operational Marine Storm Forecasting Needs 265
9. Conclusions 273
References 274

7. Sea Surface Temperature Determinations

JOHN C. ALISHOUSE AND E. PAUL MCCLAIN

1. Introduction to Remote Sensing of Sea Surface Temperature 279
2. Microwave Sensing of Sea Surface Temperature 281
3. Infrared Sensing of Sea Surface Temperature 286
4. Summary 292
References 294

8. Ocean Color Measurements

HOWARD R. GORDON, ROSWELL W. AUSTIN, DENNIS K. CLARK, WARREN A. HOVIS, AND CHARLES S. YENTSCH

1. Introduction 297
2. The CZCS System 303
3. Response to Oceanic and Atmospheric Conditions 306
4. Remote Sensing of the Phytoplankton Pigment Concentration 313
5. Remote Sensing of the Diffuse Attenuation Coefficient of Water 322
6. Summary and Conclusions 331
References 332

9. Observations of the Polar Regions from Satellites Using Active and Passive Microwave Techniques

C. T. SWIFT, W. J. CAMPBELL, D. J. CAVALIERI, L. S. FEDOR, P. GLOERSEN, N. M. MOGNARD, S. PETEHERYCH, AND H. J. ZWALLY

1. Introduction 336
2. Sea-Ice Observations by Seasat: A Case Study 337
3. Sea-Ice Observations by Nimbus-7 367
4. Observations of Ocean Waves in the Antarctic 373
5. Seasat Altimeter Observations of Ice Sheets 379
References 390

10. Precipitation in Tropical Cyclones

CECILIA GIRZ GRIFFITH AND L. S. FEDOR

1. Introduction 393
2. Rain Rate Estimates from the VIRR 394
3. Future Studies 415
References 416

11. Living Marine Resources Applications

R. MICHAEL LAURS AND JOHN T. BRUCKS

1. Introduction 419
2. Satellite Ocean Remote-Sensing Applications in Fisheries Research 421
3. Utilization of Satellite Data in Fisheries-Aids Products Distribution to Fishermen 443
References 450

Appendix A. Instruments

A.1. Introduction 453
A.2. Radar Altimeter 453
A.3. Seasat Scatterometer System 453
A.4. Scanning Multichannel Microwave Radiometer 457
A.5. Synthetic Aperture Radar 457
A.6. Coastal Zone Color Scanner 457

Appendix B. Seasat Validation Program

JOHN C. WILKERSON

B.1. Introduction 463
B.2. Weather Conditions 466
B.3. Plan of Operations (General) 467
B.4. OSS Oceanographer 469
B.5. Ocean Weather Station PAPA 474
B.6. NOAA Data Buoys 474
B.7. Aircraft 477
B.8. Total Data Sets 477

Appendix C. Data Availability

BRUCE H. NEEDHAM

C.1. Seasat Data Archive and Distribution 481
C.2. Nimbus-7 Coastal Zone Color Scanner (CZCS) 487
C.3. Ordering Data 493

Appendix D. Glossary of Acronyms

..... 495

WILBER B. HUSTON AND NANCY J. HOOPER

Appendix E. Glossary of Symbols

..... 499

WILBER B. HUSTON

INDEX 505

CHAPTER 2

THE 1978 OCEANIC TRILOGY: SEASAT, NIMBUS-7, AND TIROS-N

JOHN W. SHERMAN, III

National Oceanic and Atmospheric Administration
National Environmental Satellite, Data, and Information Service
Washington, D.C.

1. Introduction 11
2. The Seasat Sensors and Results 12
   2.1. Surface Information 14
   2.2. Preliminary Results 15
3. The Nimbus-7 Sensors and Results 47
   3.1. Surface Information 50
   3.2. Preliminary Results 50
4. The TIROS-N Series and Results 52
5. Summary 56
   References 59

ANALYSIS AND INTERPRETATION OF ALTIMETER SEA ECHO

DONALD E. BARRICK
Ocean Surface Research
Boulder, Colorado

BELINDA J. LIPA
Ocean Surface Research
Woodside, California

1. Introduction 61
2. The Convolutional Representation of the Signal and Its Use 62
   2.1. Derivation of Convolutional Form 62
   2.2. Recovery of Joint Probability Density from Seasat Data 65
3. Model Fits of Recovered Sea Surface Probability Density 68
4. The Study of Altimetric Biases Using Models 73
   4.1. Echo Model with Gaussian Beam/Pulse Shapes and Gram–Charlier Surface Probability Density 73
   4.2. Semiempirical Seasat Model, Neglecting Pointing Error 75
   4.3. Tracker-Bias Study Using the Semiempirical Model 78
   4.4. Antenna Pointing-Error Effects—Model for Echo Plateau 79
   4.5. Rain Effects on Altimeter Echo 83
5. Electromagnetic Bias 86
6. A General, Improved Deconvolution Algorithm 93
7. Conclusions 96
   Appendix 97
   References 99

OCEANIC SURFACE WINDS

DUNCAN B. ROSS

National Oceanic and Atmospheric Administration
Atlantic Oceanographic and Meteorological Laboratory
Miami, Florida

VINCENT J. CARDONE

Oceanweather, Inc.
White Plains, New York

JAMES OVERLAND

National Oceanic and Atmospheric Administration
Pacific Marine Environmental Laboratories
Seattle, Washington

RONALD D. MCPHERSON

National Oceanic and Atmospheric Administration
National Meteorological Center
Washington, D.C.

WILLARD J. PIERSON, JR.

CUNY Institute of Marine and Atmospheric Sciences
The City College of New York
New York, New York

TSANN-WANG YU

National Oceanic and Atmospheric Administration
National Meteorological Center
Washington, D.C.

1. Introduction 101
2. Mechanism for Measurement of Surface Wind Speed Using Microwave Systems . . 103
3. The Marine Surface Boundary Layer 105
   3.1. The Surface Roughness and Drag Coefficient 107
   3.2. Stability Effects 108
4. Development of a Model Function Relating SASS Data to Surface Wind Speed . . 109
   4.1. The Comparison Data 110
   4.2. The Time-Averaging Problem 116
   4.3. Definition of Surface Winds 117
   4.4. The Synoptic Scale 120
5. Global Data Assimilation Experiments 121
   5.1. Assimilation System 122
   5.2. Preprocessing of the SASS Wind Data 127
   5.3. Assimilation Experiments 128
   5.4. Forecast Experiments 132
   5.5. Summary 135
6. Conclusions 137
   References 138

SURFACE AND INTERNAL OCEAN WAVE OBSERVATIONS

C. L. RUFENACH AND L. S. FEDOR

National Oceanic and Atmospheric Administration
Wave Propagation Laboratory
Environmental Research Laboratories
Boulder, Colorado

J. R. APEL

Applied Physics Laboratory
The Johns Hopkins University
Laurel, Maryland

F. I. GONZALEZ

National Oceanic and Atmospheric Administration
Pacific Marine Environmental Laboratory
Environmental Research Laboratories
Seattle, Washington

1. Introduction 141
2. Ocean Surface Waves 142
   2.1. Physical Characteristics 142
   2.2. Altimetry 146
   2.3. Synthetic Aperture Radar 153
3. Ocean Internal Waves 176
   3.1. Observations 176
   3.2. Ancillary Oceanographic Information 181
   3.3. Interpretation 183
   3.4. Theoretical Considerations 184
   3.5. Amplitude Estimates 189
4. Summary and Conclusions 192
   References 193

SEASAT MICROWAVE WIND AND RAIN OBSERVATIONS IN SEVERE TROPICAL AND MIDLATITUDE MARINE STORMS

PETER G. BLACK

Atlantic Oceanographic and Meteorological Laboratory
Hurricane Research Division
Miami, Florida

R. CECIL GENTRY

Department of Physics and Astronomy
Clemson University
Clemson, South Carolina

VINCENT J. CARDONE

Oceanweather, Inc.
White Plains, New York

JEFFREY D. HAWKINS[1]

Atlantic Oceanographic and Meteorological Laboratory
Hurricane Research Divison
Miami, Florida

1. Introduction 198
2. The Nature of Severe Marine Storms 200
   2.1. Tropical-Cyclone Structure 200
   2.2. Severe Midlatitude Marine Storms 204
3. Microwave Measurements in Severe Marine Storms 206
   3.1. Remote Sensing of Tropical-Cyclone Cloud and Precipitation Patterns 206
   3.2. Microwave Remote Sensing of Ocean Surface Winds 207
4. Seasat Observations of Rain Rate and Microwave Attenuation in Tropical Cyclones 208
5. Seasat Surface Wind Observations in Tropical Cyclones 215
   5.1. Aircraft Data 216
   5.2. Cloud-Motion Winds 217
   5.3. SASS Winds and Methods of Comparison 217
   5.4. SASS Alias Removal in Tropical Cyclones 218
6. Analysis of Individual Storms and Comparison of Seasat Data with "Surface-Truth" Data 218
   6.1. Hurricane Fico, July 1978 218
   6.2. Hurricane Ella, September 1978 229
   6.3. Hurricane Greta, September 1978 238
   6.4. Selected Typhoons 246
   6.5. Hurricane Ella Model Fields 248
   6.6. QE II Storm 249
   6.7. Discussion of Errors in Wind Measurement 258
7. Seasat Observations of Sea Surface Temperature Near Tropical Cyclones 264
8. Application of Seasat Observations to Operational Marine Storm Forecasting Needs 265
   8.1. Tropical-Cyclone Forecast Applications 265
   8.2. Extratropical-Cyclone Forecast Applications 270

[1] Present address: Naval Ocean Research and Development Activity (NORDA), Bay St. Louis, Mississippi.

9. Conclusions 273
References 274

CHAPTER 7

SEA SURFACE TEMPERATURE DETERMINATIONS

JOHN C. ALISHOUSE E. PAUL MCCLAIN

NOAA/NESDIS/SEL *NOAA/NESDIS/CESL*
Washington, D. C. *Washington, D. C.*

1. Introduction to Remote Sensing of Sea Surface Temperature 279
1.1. Radiative Transfer 279
1.2. Transmissivity and Emissivity Considerations. 280
2. Microwave Sensing of Sea Surface Temperature 281
2.1. Background 281
2.2. SMMR Results 282
3. Infrared Sensing of Sea Surface Temperature 286
3.1. Background and Previous Results. 286
3.2. AVHRR Results 287
4. Summary 292
References 294

CHAPTER 8

OCEAN COLOR MEASUREMENTS

HOWARD R. GORDON
Department of Physics
University of Miami
Coral Gables, Florida

ROSWELL W. AUSTIN
Visibility Laboratory
Scripps Institution of Oceanography
La Jolla, California

DENNIS K. CLARK AND
WARREN A. HOVIS
National Oceanic and Atmospheric Administration
National Environmental Satellite, Data, and Information Service
Washington, D.C.

CHARLES S. YENTSCH
Bigelow Laboratory for Ocean Sciences
West Boothbay Harbor, Maine

1. Introduction 297
2. The CZCS System 303
3. Response to Oceanic and Atmospheric Conditions 306
   3.1. Introduction 306
   3.2. Subsurface Contribution to $L_t : L_w$ 307
   3.3. Atmospheric and Sea Surface Contributions to $L_t : L_1$ 310
4. Remote Sensing of the Phytoplankton Pigment Concentration 313
   4.1. Development of the Bio-optical Algorithm 313
   4.2. Application of the Bio-optical Algorithms to CZCS Imagery 317
5. Remote Sensing of the Diffuse Attenuation Coefficient of Water 322
   5.1. The Diffuse Attenuation Coefficient 323
   5.2. Development of the "K" Algorithm 324
   5.3. Application of the "K" Algorithm to CZCS Imagery 327
6. Summary and Conclusions 331
   References 332

OBSERVATIONS OF THE POLAR REGIONS FROM SATELLITES USING ACTIVE AND PASSIVE MICROWAVE TECHNIQUES

C. T. SWIFT

Department of Electrical and Computer Engineering
University of Massachusetts
Amherst, Massachusetts

W. J. CAMPBELL

United States Geological Survey
University of Puget Sound
Tacoma, Washington

D. J. CAVALIERI, P. GLOERSEN, AND H. J. ZWALLY

National Aeronautics and Space Administration
Goddard Space Flight Center
Greenbelt, Maryland

L. S. FEDOR

National Oceanic and Atmospheric Administration
Wave Propagation Laboratory
Environmental Research Laboratories
Boulder, Colorado

N. M. MOGNARD

Groupe de Recherche de Geodesic Spatiales
Centre Nacional d'etudes Spatiales
Toulouse, Cedex, France

S. PETEHERYCH

Atmospheric Environment Service
Downsview, Ontario, Canada

1. Introduction 336
2. Sea-Ice Observations by Seasat: A Case Study 337
   2.1. Meteorological and Surface Observations 337
   2.2. Seasat SAR Observations. 339
   2.3. Seasat SASS and SMMR Observations 351
   2.4. Altimeter Observations 357
   2.5. Ice-Edge Observations. 365
   2.6. Discussion and Conclusions 366
3. Sea-Ice Observations by Nimbus-7 367
   3.1. Introduction 367
   3.2. Nimbus-7 SMMR Sea-Ice Algorithm. 369
   3.3. Sample Calculations 371
   3.4. Conclusions 373
4. Observations of Ocean Waves in the Antarctic 373
   4.1. Introduction 373
   4.2. The Analysis Procedures 374
   4.3. Results 375
   4.4. Conclusions 378
5. Seasat Altimeter Observations of Ice Sheets 379
   5.1. Introduction 379
   5.2. The Tracking Algorithm over Ice Sheets 381
   5.3. Analysis of Data for Greenland Overflights 387
   References 390

CHAPTER 10

PRECIPITATION IN TROPICAL CYCLONES

CECILIA GIRZ GRIFFITH
National Oceanic and Atmospheric Administration
Weather Research Program
Environmental Research Laboratories
Boulder, Colorado

L. S. FEDOR
National Oceanic and Atmospheric Administration
Wave Propagation Laboratory
Environmental Research Laboratories
Boulder, Colorado

1. Introduction 393
2. Rain Rate Estimates from the VIRR 394
   2.1. Technique 394
   2.2. Limitations 398
   2.3. Results 400
3. Future Studies 415
   References 416

CHAPTER 11

LIVING MARINE RESOURCES APPLICATIONS

R. MICHAEL LAURS
National Marine Fisheries Service
Southwest Fisheries Center
La Jolla, California

JOHN T. BRUCKS
National Marine Fisheries Service
Fishery Engineering and Development Division
National Space Technology Laboratories
NSTL Station, Mississippi

1. Introduction 419
2. Satellite Ocean Remote-Sensing Applications in Fisheries Research 421
   2.1. Use of Satellite Infrared Thermal Data in Fisheries Research 421
   2.2. Modeling Larval Transport Mechanisms Using High-Resolution SASS Wind-Stress Measurements 429
   2.3. Use of Coastal Zone Color Scanner Data in Fisheries Research 436
3. Utilization of Satellite Data in Fisheries-Aids Products Distribution to Fishermen . 443
   3.1. Thermal Boundary Charts 443
   3.2. Sea-Ice Forecast Charts 447
   3.3. NASA/JPL Satellite Data Distribution System and Fisheries Demonstration Program to U.S. West Coast Fisheries 447
   References 450
