CONTRIBUTORS TO VOLUME VII	v
PREFACE	vii

The Physics of Semiconductor Materials

BY ELIAS BURSTEIN AND PAUL H. EGLI, *Crystal Branch, United States Naval Research Laboratory, Washington, D. C.*

I. Introduction	1
II. Nature of Semiconductors	3
III. Trends in Fundamental Properties	18
IV. Impurity and Lattice Defect Centers	29
V. Lifetime of Electron-Hole Pairs	52
VI. Procedures for Determining Characteristic Properties of Semiconductors	59
VII. Current Information on Familiar Semiconductor Materials	69
References	77

Theory of the Electrical Properties of Germanium and Silicon

BY HARVEY BROOKS, *Department of Applied Physics, Harvard University, Cambridge, Massachusetts*

I. Properties of Energy Bands	87
II. Motion of Electrons in External Fields	94
III. Properties of Localized States in Semiconductors	101
IV. Statistical Mechanics of Semiconductors	117
V. Theory of Transport Properties of Semiconductors	127
VI. Mechanisms of Scattering	144
VII. Optical Properties	165
References	177

Characteristic Energy Losses of Electrons in Solids

BY L. MARTON, LEWIS B. LEDER, AND H. MENDLOWITZ, *National Bureau of Standards, Washington, D. C.*

I. Introduction	183
II. Instrumentation and Experimental Methods	184
III. Experimental Results	200
IV. Qualitative Interpretations	223
V. Theoretical Problem	227
References	236

Sputtering by Ion Bombardment

BY GOTTFRIED K. WEHNER, *Electronic Components Laboratory, Wright Air Development Center, Wright-Patterson Air Force Base, Dayton, Ohio*

I. Introduction and Survey	239
II. Measuring Methods	241

III. Results of Sputtering Measurements	257
IV. Sputtering Theories	292
References	297

Observational Radio Astronomy

By J. P. WILD, *Division of Radiophysics, C.S.I.R.O., Sydney, Australia*

I. Introduction	299
II. A Summary of Radio-Astronomical Results	300
III. The Measurement of Extraterrestrial Radiation at Radio Wavelengths	312
IV. The Struggle for Resolving Power	331
V. The Significance of Radio Observations in Astronomy	356
References	360

Analog Computers

By A. W. VANCE, E. C. HUTTER, J. LEHMANN, AND M. L. WADLIN, *David Sarnoff Research Center, Princeton, New Jersey*

I. Introduction	363
II. Analog Components	365
III. Electronic Analog Computer Systems	378
IV. Uses of Computers	389
References	397

Electrical Discharge in Gases and Modern Electronics

By L. GOLDSTEIN, *University of Illinois, Urbana-Champaign, Illinois*

I. Generalities on Electrical Discharges in Gases	401
II. Gas Discharge Breakdown in High Radio Frequency Electromagnetic Fields	415
III. Microwave Methods for the Study of Gaseous Discharges	431
IV. The Mechanism of Deionization—Electron Removal from a Plasma by Diffusion	444
V. Mechanism of Deionization—Recombination of Electrons with Positive Ions	452
VI. Attachment of Free Electrons—Formation of Negative Ions	461
VII. Mobility of Positive Ions in Monatomic Gases—Formation of Molecular Ions in the Rare Gases	464
VIII. Excitation and Ionization Processes in Decaying Gas Discharge Plasma	472
IX. Temperature Determination of an Electron Gas in Gaseous Discharge Plasmas	479
X. Microwave Propagation Effects in Gaseous Discharge Plasmas—Applications to the Study of Gaseous Discharge Phenomena	483
References	498
Author Index	505
Subject Index	518
