FOREWORD	vii

The Analysis of Dense Electron Beams

K. AMBOSS

Introduction	1
References	4
I. Historical Survey	4
References	15
II. The Equations Describing the Electron Flow	17
References	32
III. Calculation of the Macroscopic Properties of Static Dense Beams Using the One-Particle Distribution Function f_1	33
References	75
IV. Self-Consistent Flows Derived under the Neglect of the Initial Thermal Velocity Distribution	75
References	143
V. Nonanalytic Methods of Obtaining Self-Consistent Space Charge Flows	144
References	170

Generation of Far-Infrared Radiation

L. C. ROBINSON

Introduction	171
I. Incoherent Sources	174
II. Harmonic Generators	176
III. Electron Tubes	186
IV. Relativistic Electrons	198
V. Quantum Oscillators	200
References	212

Electron Mirror Microscopy

R. M. OMAN

I. Introduction	217
II. Topology	221
III. Electric	226
IV. Magnetic	235

V. Experimental Considerations	240
VI. Special Techniques and Applications	244
VII. Summary	248
References	249

**The Statistical Behavior of the Scintillation Detector:
Theories and Experiments**

S. DONATI, E. GATTI, and V. SVELTO

I. Introduction	251
II. Statistical Model	253
III. Statistical Theory of the Scintillation Detector	254
IV. The Amplitude Distribution	264
V. Time Measurements with Scintillation Detectors.	277
VI. Pulse Shape Discrimination	303
References	306

Electrical Breakdown in Solids

N. KLEIN

I. Breakdown Properties and Processes	309
II. Calculation of Thermal Breakdown	316
III. Breakdown in Semiconductors	326
IV. Breakdown in Insulators	359
References	420
 AUTHOR INDEX	 425
SUBJECT INDEX	434
