Voltage Measurement in the Scanning Electron Microscope

A. GOPINATH

I. Introduction	1
II. Historical Background	2
III. Introduction to the SEM	3
IV. Qualitative Voltage Contrast	6
V. Voltage Contrast Linearization for Potential Measurements ..	10
VI. Auger Electron Voltage Measurement Schemes	24
VII. Estimate for Minimum Measurable Voltage	25
VIII. Observation of Fast Voltage Waveforms and Dynamic Voltage Distribution	31
IX. Electron-Beam Pulsing in the SEM	33
X. Stroboscopic and Sampling-Mode Operation of the SEM	44
XI. Voltage Contrast with Synchronous and Asynchronous Pulsed Beams	47
XII. Conclusions	50
References	51

New Experiments and Theoretical Development of the Quantum Modulation of Electrons (Schwarz-Hora Effect)

HEINRICH HORA and PETER H. HANDEL

I. Introduction	55
II. Review of Experiments	57
III. The Quantum Property of Modulation Derived from a Correspondence Principle for Electromagnetic Interaction	72
IV. Coherence Effects	77
V. Peierls Dispersion in the Varshalovich-Dyakonov Correction to Explain the Relativistic Long Beating Wavelength	86
VI. A Comprehensive Scattering Model for Quantum Modulation	89
VII. Re-emission of Radiation from a Quantum-Modulated Beam .	93
VIII. Concluding Remarks	108
References	110

Device Developments for Optical Information Processing

JOHN N. LEE and ARTHUR D. FISHER

I. Introduction	115
II. Light Sources	117
III. Light Control Devices	123
IV. Photodetectors	161
V. Summary	168
References	169

Monte Carlo Methods and Microlithography Simulation for Electron and X-Ray Beams

KENJI MURATA and DAVID F. KYSER

I. Introduction	176
II. Monte Carlo Modeling of Electron Scattering	177
III. Monte Carlo Modeling of the Photo- and Auger Electron Production in X-Ray Lithography	197
IV. Resist Modeling	203
V. Applications to Pattern Analyses in Electron-Beam Lithography	208
VI. Applications to X-Ray Lithography	243
VII. Applications to Registration Mark Detection in Electron-Beam Lithography and Mask Inspection Technology	248
References	255

Invariance in Pattern Recognition

HARRY WECHSLER

I. Introduction	262
II. Computational Vision	264
III. Review of Basic Concepts	268
IV. Geometrical Invariance	275
V. Statistical Invariance	290
VI. Restoration	298
VII. Structural Methods	303
VIII. Conclusions	318
References	320
INDEX	323
