PREFACE	ix

Theory of the Gaseous Detector Device in the ESEM

G. D. DANILATOS

I. Introduction	2
II. Principles	4
III. Physical Parameters	16
IV. Terminology	36
V. Discharge Characteristics	42
VI. Amplification	60
VII. Scintillation GDD	80
VIII. Signal Spectroscopy	84
IX. Remarks	91
X. Conclusion	97
Acknowledgments	99
References	99

Carrier Transport in Bulk Silicon and in Weak Silicon Inversion Layers

S. C. JAIN, K. H. WINTERS, AND R. VAN OVERSTRAETEN

List of Symbols	104
I. Introduction	106
II. Drift Velocity in Bulk Silicon	109
III. Effect of Tangential Field on Mobility and Saturation Velocity of Electrons in Inversion Layers	112
IV. Carrier Transport and Mobility in the Weak-Inversion Region of a MOSFET. Theories Based on Macroscopic Inhomogeneity	117
V. Theories Based on Short-Range or Microscopic Inhomogeneities	128
VI. Comparison of Low-Temperature Experimental-Edge Model with the Mobility-Edge Model	134
VII. Arnold's Experiments and Macroscopic Inhomogeneity Model	138
VIII. Hall Effect and Electron-Liquid Model	140

IX. Evidence of Deviation from Random Distribution	141
X. Peaks in the Variation of μ_{WIC} with \bar{n}_{inv}	144
XI. Room- and High-Temperature Measurements	146
XII. Limitations of Theories	151
XIII. Summary of Work on Transport in Inversion Layers in the Weak-Inversion Region, and Conclusions	151
Acknowledgments	152
References	153

Emission-Imaging Electron-Optical System Design

V. P. IL'IN, V. A. KATESHOV, YU. V. KULIKOV, AND M. A. MONASTYRSKY

I. Introduction	156
II. Aberration Models of Cathode Lenses.	158
III. The Variational Analysis of Cathode-Lens Optimization and Synthesis Problems	178
IV. Implementation of the Numerical Computational Methods and System Optimization	224
V. Automation Principles in Designing Electron-Optical Systems. .	246
IV. Numerical Experiments	257
References	276
INDEX.	279
