PREFACE	ix

Applications of the Integral Equation Method to the Analysis of Electrostatic Potentials and Electron Trajectories

G. MARTINEZ AND M. SANCHO

I. Introduction	1
II. Integral Equations for Conductors and Dielectrics	2
III. Numerical Technique	6
IV. Examples	15
V. Conclusions	40
References	40

Energy-Filtering Transmission Electron Microscopy

L. REIMER

I. Introduction	43
II. Physics of Elastic and Inelastic Electron Scattering	44
III. Instrumentation and Modes of Operation	62
IV. Electron Spectroscopic Imaging	75
V. Electron Spectroscopic Diffraction	105
VI. Summary and Prospects	118

Bodo von Borries: Pioneer of Electron Microscopy

HEDWIG VON BORRIES

127

Design Principles of an Optimized Focused Ion Beam System

Y. L. WANG AND ZHIFENG SHAO

I. Introduction	177
II. Beam Profile and Beam Radius	180
III. Optimization	194
IV. Examples	202
V. Conclusion	207

Electron Microscopy in Berlin 1928–1945

C. WOLPERS

211

Canonical Theory in Electron Optics

JIYE XIMEN

I. Introduction	231
II. Conventional Aberration Theory in Lagrangian Representations	236
III. Canonical Aberration Theory in Hamiltonian Representations	239
IV. Applications of Canonical Aberration Theory	245
V. Canonical Electron Beam Optics	255
VI. Conclusion and Discussion	264
Appendix	268
References	275
