Group Invariant Fourier Transform Algorithms

R. TOLIMIERI, M. AN, Y. ABDELATIF, C. LU, G. KECHRIOTIS,
AND N. ANUPINDI

I. Introduction	2
II. Group Theory	3
III. FT of a Finite Abelian Group	14
IV. FFT Algorithms	16
V. Examples and Implementations	21
VI. Affine Group RT Algorithms	30
VII. Implementation Results	42
VIII. Affine Group CT FFT	46
IX. Incorporating 1D Symmetries in FFT	53
References	55

Crystal-Aperture STEM

JACOBUS T. FOURIE

I. Introduction	57
II. Theoretical Considerations and Experimental Evidence	59
III. Experimental Results in Imaging	90
IV. Summary and Conclusions	106
References	107

Phase Retrieval Using the Properties of Entire Functions

N. NAKAJIMA

I. Introduction	109
II. Theoretical Background	112
III. Extension to Two-Dimensional Phase Retrieval	131

IV. Application to Related Problems	139
V. Conclusions	167
References	168

Multislice Approach to Lens Analysis

GIULIO POZZI

I. Introduction	173
II. Standard Multislice and BPM Equations and First Applications	176
III. Application of the Multislice Equations to Round Symmetric Electron Lenses	186
IV. Improved BPM Equations and Application to Gradient Index Lenses	202
V. Beyond the Paraxial Approximation	207
VI. Conclusions	215
References	216

Orientation Analysis and Its Applications in Image Analysis

N. KEITH TOVEY, MARK W. HOUNSLOW, AND JIANMIN WANG

I. Introduction	220
II. Definition of the Task	224
III. Image Acquisition	228
IV. Image Processing and Analysis of Orientation	231
V. Generalized Intensity Gradient Operators	246
VI. Enhanced Orientation Analysis—Domain Segmentation	287
VII. Applications of Orientation Analysis	300
VIII. Implementation and Automation of Orientation Analysis	319
IX. Concluding Remarks	323
References	326

INDEX	331
