Group Algebras in Signal and Image Processing

DENNIS WENZEL AND DAVID EBERLY

I. Introduction	2
II. Convolution by Sections	4
III. Group Algebras	8
IV. Direct Product Group Algebras	14
V. Semidirect Product Group Algebras	19
VI. Inverses of Group Algebra Elements	22
VII. Matrix Transforms	27
VIII. Feature Detection Using Group Algebras	44
IX. The GRASP Class Library	55
X. GRASP Class Library Source Code	63
References	78

Mirror Electron Microscopy

REINHOLD GODEHARDT

I. Introduction	81
II. Principles of Mirror Electron Microscopy	83
III. Applications of the Mirror Electron Microscope	95
IV. Fundamentals of Quantitative Mirror Electron Microscopy	98
V. Quantitative Contrast Interpretation of One-Dimensional Electrical Distortion Fields	109
VI. Quantitative Contrast Interpretation of One-Dimensional Magnetic Distortion Fields	114
VII. Quantitative Mirror Electron Microscopy, Example 1: Contrast Simulation of Magnetic Fringing Fields of Recorded Periodic Flux Reversals	119

VIII. Quantitative Mirror Electron Microscopy, Example 2: Investigation of Electrical Microfields of Rotational Symmetry and Evaluation of Current Filaments in Metal–Insulator–Semiconductor Samples	124
IX. Concluding Remarks	144
References	145

Rough Sets

JERZY W. GRZYMALA-BUSSE

I. Fundamentals of Rough Set Theory	152
II. Rough Set Theory and Evidence Theory	171
III. Some Applications of Rough Sets	182
IV. Conclusions	194
References	194

Theoretical Concepts of Electron Holography

FRANK KAHL AND HARALD ROSE

I. Introduction	197
II. The Scattering Amplitude	200
III. Image Formation in Transmission Electron Microscopy	203
IV. Off-Axis Holography in the Transmission Electron Microscope	213
V. Image Formation in Scanning Transmission Electron Microscopy	221
VI. Off-Axis Scanning Transmission Electron Microscope Holography	232
VII. Conclusion	252
Appendix: Fresnel Diffraction in Off-Axis Transmission Electron Microscope Holography	253
References	256

Quantum Neural Computing

SUBHASH C. KAK

I. Introduction	260
II. Turing Test Revisited	266

III. Neural Network Models	272
IV. The Binding Problem and Learning	284
V. On Indivisible Phenomena	293
VI. On Quantum and Neural Computation	298
VII. Structure and Information	305
VIII. Concluding Remarks	309
References	310

Signal Description: New Approaches, New Results

ALEXANDER M. ZAYEZDNY AND ILAN DRUCKMANN

I. Introduction	315
II. Theoretical Basis of the Structural Properties Method	327
III. Generalized Phase Planes	347
IV. Applications	365
References	394
INDEX	397
