## Survey of Microanalysis—Interpolation and Extrapolation

*L. Marton*

Text	1
References	13

## Behavior of Electrons in a Specimen

*Gunji Shinoda*

I. Introduction	15
II. Backscattering and Diffusion of Electrons	17
III. Spot Size of Diffused X-Ray Source and Depth Distribution of Characteristic X-Ray	25
IV. Resolving Power of Electron Microprobe	31
V. Application of Backscattered Electron and Specimen Current Methods	38
References	42

## The Sandwich Sample Technique Applied to Quantitative Microprobe Analysis

*James D. Brown*

I. Introduction	45
II. The Absorption Correction	47
III. Fluorescence Due to Characteristic Lines	54
IV. The Atomic Number Effect	68
V. A Model for Quantitative Electron Probe Microanalysis	69
References	70

## **Quantitative Microprobe Analysis: A Basis for Universal Atomic Number Correction Tables**

*Richard C. Wolf and Victor G. Macres*

I. Introduction	73
II. Formulation of Atomic Number Correction	76
III. Discussion and Evaluation of the Correction Formula	84
IV. Basis for Universal Correction Tables	95
V. Application to Experimental Data	98
VI. Summary and Conclusions	111
Appendix I. Tabulation of $\lambda'$ Values	112
Appendix II. Example Calculation Using Universal Atomic Number Correction Tables	113
Appendix III. Mass Absorption Coefficients	113
Appendix IV. Mass Absorption Coefficients	114
References	114

## **Deconvolution: A Technique to Increase Electron Probe Resolution**

*E. J. Rapperport*

Summary	117
I. Introduction	118
II. Theory of the Deconvolution Method	119
III. Mathematics of the Deconvolution Method	121
IV. Experimental Measurements	124
V. Reduction of Data	129
VI. Discussion	133
References	136

## **Analysis for Low Atomic Number Elements with the Electron Microprobe**

*P. S. Ong*

I. Introduction	137
II. The Stearate Crystal	138
III. Reduction of Carbon Contamination	144
IV. Analysis of the Light Elements	148
References	153

## **Changes in X-Ray Emission Spectra Observed between the Pure Elements and Elements in Combination with Others to Form Compounds or Alloys**

*William L. Baun*

I. Introduction	155
II. X-Ray Emission Spectra	158
III. Applications	174
References	175

## **Backscattered and Secondary Electron Emission as Ancillary Techniques in Electron Probe Analysis**

*J. W. Colby*

I. Introduction	177
II. Qualitative Considerations	178
III. Experimental Techniques	181
IV. Quantitative Analysis	190
V. Scanning Images	192
References	195

## **The Influence of the Preparation of Metal Specimens on the Precision of Electron Probe Microanalysis**

*G. Hallerman and M. L. Picklesimer*

I. Introduction	197
II. Problems in Specimen Preparation	198
III. Effects of Surface Roughness	205
IV. Effects of Leaching, Deposition, Smearing, and Etching	217
V. Effects of Anodic or Vapor Deposited Films	221
VI. Conclusions	224
References	225

## **Electron Probe Microanalysis in Mineralogy**

*Cynthia W. Mead*

I. Introduction	227
II. Sample Preparation	228
III. Problems Inherent in Mineral Analysis	228
IV. Qualitative Analysis of Minerals	229
V. Quantitative Analysis of Minerals	232
VI. Examples of Electron Probe Analysis in Mineralogy	233
VII. Future Trends	241
VIII. Conclusions	241
References	242

## **Electron Probe Analysis in Metallurgy**

*Joseph I. Goldstein*

I. Introduction	245
II. Applications in Metallography	246
III. Kinetic Processes	266
IV. Conclusion	288
References	288

**Scanning Electron Probe Measurement of Magnetic Fields***John R. Dorsey*

I. Introduction	291
II. Basic Description of the Method	292
III. Magnetic Field Calculation	293
IV. Angular Deflection of Secondaries	294
V. Detected Signal Due to Magnetic Field	295
VI. Detected Signal Due to Surface Relief	296
VII. Other Limitations	297
VIII. Description of Detector	298
IX. Specimen Preparation	301
X. Measurement Techniques, Results and Discussion	302
XI. Image Displays	305
XII. Conclusions	308
Appendix I. Other Detector Applications	308
Appendix II. Specimen and Collector Currents under Bias Conditions	309
Appendix III. Magnetic Signal under Bias Conditions	311
References	312

**Nondispersive X-Ray Emission Analysis for Lunar Surface  
Geochemical Exploration***J. I. Trombka and I. Adler*

I. Introduction	313
II. Data Analysis	320
III. Application of Least-Square Technique to an Experimental Problem	338
References	359

**The Divergent Beam X-Ray Technique***Harvey Yakowitz*

List of Symbols	361
I. Introduction	363
II. Early Work	364
III. Formation of the Observed X-Ray Conic Sections	366
IV. Pattern Interpretation	375
V. Orientation of Crystals by Means of the Kossel Technique	403
VI. Use of the Kossel Technique to Study Mechanical and Thermodynamic Characteristics of Crystals	406
VII. Experimental Methods in Divergent Beam Diffraction	414
VIII. Contribution of Divergent Beam X-Ray Diffraction to Scientific Research	424
References	428
