FOREWORD	xi
PREFACE	xiii

1 Introduction

1.1 The Origins of Sinusoidal Waves in Radio Transmission	1
1.2 Lumped, Time-Variable Resonant Circuits	4
1.3 Distributed, Time-Invariant Resonant Circuits	14
1.4 Relative Bandwidth	19
1.5 Attenuation of Waves, Noise, and Distortions	24
1.6 When to Use Nonsinusoidal Waves	30

2 Radio Signals with Large Relative Bandwidth

2.1 Basic Concepts	47
2.2 Carrier-Free Signals	53
2.3 Sinusoidal Carriers	56
2.3.1 Amplitude Modulation of a Sinusoidal Carrier	56
2.3.2 Demodulation	64
2.3.3 Frequency Modulation of a Sinusoidal Carrier	69
2.4 Nonsinusoidal Carriers	72
2.4.1 Amplitude Modulation of a Nonsinusoidal Carrier	72
2.4.2 Control of Energy Distribution	76
2.4.3 Demodulation of General Carriers	78

3 Radiators and Receptors

3.1 Frequency-Independent Antennas	82
3.2 Hertzian Dipole	85

* Equations are numbered consecutively within each of Sections 1.1–7.8. Reference to an equation in a different section is made by writing the number of the section in front of the number of the equation, e.g., Eq. (3.1-4) for Eq. (4) in Section 3.1.

Illustrations and tables are numbered consecutively within each of the Sections 1.1–7.8, with the number of the section given first, e.g., Fig. 1.2-1, Table 1.4-1.

References are characterized by the name of the author(s), the year of publication, and a lowercase Latin letter if more than one reference by the same author(s) is listed for that year.

3.2.1	Frequency-Independent Operation	85
3.2.2	Dipole Arrays	88
3.2.3	Large Current Dipoles	108
3.3	Resonating Radiators	113
3.4	Receptors	116
4	Selective Receivers	
4.1	Receiver for General Periodic Waves	119
4.2	Radio-Sequency Filter	121
4.2.1	Sequency Low-Pass Filter	121
4.2.2	Sequency Band-Pass Filter	126
4.2.3	Short-Period Eliminator	128
4.3	Sequency Converter	131
4.4	Intermediate-Sequency Filter	133
4.5	Waveform Discriminator	136
4.6	Receiver for Nonperiodic Waves	139
5	Applications in Radar	
5.1	Low-Angle Tracking	144
5.1.1	Principle of Amplitude Reversal	144
5.1.2	Reflection of Linearly Polarized Nonsinusoidal Waves	147
5.1.3	On the Use of Fourier Analysis	151
5.1.4	Required Range Resolution	154
5.1.5	Comparison with Conventional Radar	158
5.1.6	Armored Vehicle Tracking Radar	159
5.2	Synthetic Aperture Radar	162
5.2.1	Resolution of Two Points	162
5.2.2	Distance and Location Error	166
5.2.3	Sidelooking Radar	167
5.2.4	Stationary Radar with Synthetic Aperture	173
5.2.5	Two-Dimensional Synthetic Aperture	178
5.2.6	Resolution of Pulses	184
5.2.7	Angular Resolution with Finite Bandwidth	192
5.2.8	Beam Forming by Means of the Doppler Effect	195
5.2.9	Doppler Effect of a Simple Nonsinusoidal Carrier	201
5.2.10	Doppler Effect of a Coded Carrier	204
5.2.11	Beam Forming with a Coded Carrier	208
5.2.12	Pulse Position and Pulse Shape	211
5.2.13	Ghost Suppression	214
5.2.14	Beam Forming by the MTI Technique	216
5.2.15	Beam Forming and Imaging Based on Pulse Slopes	218
5.3	Tracking Radar and Beam Rider	225
5.3.1	Geometric Relations	225
5.3.2	Beam Axis as Intersection of Two Half-Cones	228
5.3.3	Simple Nonsinusoidal Signals	231

5.3.4	Beamwidth, Angular Resolution, Accuracy of Angle	233
5.3.5	Modes of Operation	241
5.4	Look-Down Radar	244
5.4.1	Problem of Resolution	244
5.4.2	Digitally Controlled Waves	249
5.4.3	Pulse Generation and Compression	251
5.4.4	Clutter Cancellation	253
5.4.5	Technical Problems	255

6 Advanced Signal Design and Processing

6.1	Carrier Coding and Baseband Coding	257
6.1.1	Pulse Position and Pulse Shape Coding	257
6.1.2	Structure of Nonsinusoidal Radio Signals	261
6.1.3	Fine Structure or Pulse Position Coding	262
6.1.4	Maximizing the Average-to-Peak Power Ratio	268
6.1.5	Principles of Receiver Design	273
6.1.6	Doppler Shift Resolvers	277
6.1.7	Fourier Series Representation of Complicated Radio Signals	284
6.2	Thumbtack Ambiguity Function	285
6.2.1	Cross-Correlation Function for 16 Pulses	285
6.2.2	Avoidance of Large Peak Currents	295
6.2.3	Improvement of Cross-Correlation Functions	297
6.2.4	Perfect Cross-Correlation and Ambiguity Functions	304
6.3	Velocity and Acceleration Processing	308
6.3.1	Distance and Its First and Second Derivatives	308
6.3.2	Simple Velocity and Acceleration Processor	311
6.3.3	Principle of Efficient Processing	316
6.3.4	Velocity Processors	319
6.3.5	Acceleration Processor	322

7 Radio Communication with Submarines

7.1	Bandwidth Required for Teletype and Data Links	331
7.2	Attenuation in Seawater and Antenna Gain	338
7.3	Distortion of Signals in Seawater	340
7.4	The Best Frequency Band as Function of Depth	349
7.5	Typical Circuits	353
7.6	Comparison of Various Systems	357
7.7	Local and Distant Noise	367
7.8	Radiation from a Submarine	370
