PREFACE

1 Introduction

1.1	Basic Concepts	1
1.2	Transmitter and Receiver for Nonsinusoidal Waves	3
1.3	Nonsinusoidal Spread Spectrum Radio Transmission	13
1.4	Pulse Agility versus Frequency Agility	17
1.5	Limits on the Use of Fourier Analysis	22
1.6	Absorbers	26
1.7	Reflection of Short Pulses by a Layered Medium	28
1.8	Impedance Matching for Electromagnetic Waves	32
1.9	Matching Absorption and Impedance	36
1.10	Absorption of Radio Signals with Large and Small Relative Bandwidth	40

2 Radiators

2.1	Hertzian Electric Dipole	44
2.2	Resonating Radiators	54
2.3	Large-Current Radiator	57
2.4	Sheet Radiators	61
2.5	Time Variation of Antenna Current, Driving Voltage, and Radiated	
	Power	63
2.6	Efficiency of Power Radiation	69
2.7	Efficiency of Energy Radiation	73
2.8	Slot Antenna Radiator	79
2.9	Large-Voltage Radiator	90
2.10	Hertzian Magnetic Dipole	94
2.11	Traveling-Wave Antenna	99
2.12	Survey of Frequency-Independent Antennas	103

*Equations are numbered consecutively within each of Sections 1.1–6.6. Reference to an equation in a different section is made by writing the number of the section in front of the number of the equation, e.g., Eq. (6.1-54) for Eq. (54) in Section 6.1.

Illustrations and tables are numbered consecutively within each section, with the number of the section given first, e.g., Fig. 1.6-2, Table. 3.3-1.

References are characterized by the name of the author(s), the year of publication, and a lowercase Latin letter if more than one reference by the same author(s) is listed for that year. CONTENTS

3 Sensors

3.1	Phasors and Operators	107
3.2	Hertzian Electric Dipole Sensor	109
3.3	Time Variation of the Receiver Input Voltage	112
3.4	Power, Average Power, Equivalent Aperture	115
3.5	Power Matching and Distortion Reduction	119
3.6	Closed-Loop Sensor	121
3.7	Slot Antenna Sensor	123
3.8	Features of the Slot Antenna Derived from Averages	131
3.9	Hertzian Magnetic Dipole Sensor	135
3.10	Matching of Power Source and Radiator	138
3.11	Experimental Results	141

4 Antenna Arrays

Beam Forming and Information	148
Features of Signals Producing Directional Effects	150
Time Variation of Electric and Magnetic Field Strengths as Function	
of Azimuth Angle	152
Peak Amplitude. Peak Power, and Energy Patterns	157
Rise Time or Slope Pattern	160
Patterns of the Elevation Angle	161
Monopulse Antenna Patterns	165
Monopulse Antenna Patterns for Nonsinusoidal Waves	168
Nonsymmetric Antenna Patterns	174
	Beam Forming and Information Features of Signals Producing Directional Effects Time Variation of Electric and Magnetic Field Strengths as Function of Azimuth Angle Peak Amplitude, Peak Power, and Energy Patterns Rise Time or Slope Pattern Patterns of the Elevation Angle Monopulse Antenna Patterns Monopulse Antenna Patterns for Nonsinusoidal Waves Nonsymmetric Antenna Patterns

5 Array Signal Processing

5.1	Noise Suppression	177
5.2	Slope Processor	180
5.3	Energy Patterns Based on Slope Processing	183
5.4	Influence of Thermal Noise	188
5.5	Resolution Angle	191
5.6	Implementation of Circuits	196
5.7	Restoration of the Filtered Pulse	205
5.8	Directional Distortions in Radar	207
5.9	Questions of Symmetry	215

6 Waveguides

6.1	General Solution for the Rectangular Waveguide	219
6.2	Examples of Nonsinusoidal Waves	228
6.3	Rectangular Cavity Resonator	238
6.4	Cylindrical Waveguide	249
6.5	Coaxial Waveguide	256
6.6	Duplexers and Circulators	262
References and Bibliography		264

271
