

## CONTENTS

|  |           |
|--|-----------|
| <b>Preface . . . . .</b>   | <b>ix</b> |
| <b>1. Introduction . . . . .</b>   | <b>1</b>  |
| 1.1 Introduction . . . . .   | 1         |
| 1.2 Focussed Particle Beam Systems . . . . .   | 2         |
| 1.3 Classification of Interaction Phenomena . . . . .  | 3         |
| 1.4 Organization of the Chapters . . . . .   | 6         |
| <b>2. Historical Notes . . . . .</b>   | <b>9</b>  |
| 2.1 Introduction . . . . .   | 9         |
| 2.2 Particle Optics and Particle Interactions . . . . .  | 9         |
| 2.3 Boersch Effect . . . . .   | 11        |
| 2.4 Trajectory Displacement Effect . . . . .   | 19        |
| 2.5 Space Charge Effect in Low Density Particle Beams . . . . .  | 23        |
| 2.6 Monte Carlo Simulation . . . . .   | 25        |
| <b>3. General Beam Properties . . . . .</b>  | <b>27</b> |
| 3.1 Introduction . . . . .   | 27        |
| 3.2 Beam Parameters . . . . .  | 28        |
| 3.3 Classification of Beams . . . . .  | 31        |
| 3.4 Hamilton's Formalism and Liouville's Theorem . . . . .   | 32        |
| 3.5 Boltzmann Equation . . . . .   | 35        |
| 3.6 Conservation of Beam Emittance and Brightness . . . . .  | 36        |
| 3.7 Beam Temperature . . . . .   | 40        |
| 3.8 Thermodynamic Limits for Particle Interaction Effects . . . . .                                    | 49        |
| 3.9 Debeye Screening . . . . .   | 51        |
| 3.10 Potential Energy Relaxation . . . . .   | 55        |
| <b>4. The Many Body Problem of Particles Interacting through an Inverse Square Force Law . . . . .</b> | <b>59</b> |
| 4.1 Introduction . . . . .   | 59        |
| 4.2 Vlasov Equation . . . . .  | 60        |
| 4.3 Fokker–Planck Equation . . . . .   | 63        |
| 4.4 Aspects of the Diffusion Approximation . . . . .   | 67        |
| 4.5 Calculation of Coefficients of Dynamical Friction and Diffusion . . . . .                          | 69        |
| 4.6 Coulomb Logarithm . . . . .  | 75        |
| 4.7 Discussion of the Fokker–Planck Approach . . . . .   | 79        |
| 4.8 Validity of the Fokker–Planck Approach for Particle Beams . . . . .                                | 82        |
| 4.9 Holtsmark Distribution . . . . .   | 86        |
| 4.10 Conclusions . . . . .   | 89        |

|  |            |
|--|------------|
| <b>5. Concepts of an Analytical Model for Statistical Interactions in Particle Beams . . . . .</b> | <b>91</b>  |
| 5.1 Introduction . . . . .   | 91         |
| 5.2 General Formulation of the Problem . . . . .   | 91         |
| 5.3 Reduction of the $N$ -Particle Problem . . . . .   | 95         |
| 5.4 Calculation of the Displacement Distribution . . . . .   | 106        |
| 5.5 Moments and Cumulants of the Displacement Distribution . . . . .                               | 109        |
| 5.6 On- and Off-Axis Reference Trajectories . . . . .  | 112        |
| 5.7 Models in One, Two, and Three Dimensions . . . . .   | 113        |
| 5.8 Distribution of the Interaction Force in Cylindrical Beams. . . . .                            | 115        |
| 5.9 Representation in the $k$ -Domain . . . . .  | 120        |
| 5.10 Addition of the Effects Generated in Individual Beam Segments . . . . .                       | 129        |
| 5.11 Slice Method . . . . .  | 133        |
| <b>6. Two-Particle Dynamics . . . . .</b>  | <b>135</b> |
| 6.1 Introduction . . . . .   | 135        |
| 6.2 Basic Properties. . . . .  | 136        |
| 6.3 Coordinate Representation in the Orbital Plane . . . . .                                       | 140        |
| 6.4 Dynamics of a Complete Collision . . . . .   | 143        |
| 6.5 General Analysis of the Two-Particle Dynamical Problem . . . . .                               | 146        |
| 6.6 Numerical Approach to the Dynamical Problem . . . . .  | 150        |
| 6.7 Dynamics of a Nearly Complete Collision . . . . .  | 151        |
| 6.8 First Order Perturbation Dynamics . . . . .  | 156        |
| 6.9 Collisions with Zero Initial Relative Velocity . . . . .                                       | 160        |
| 6.10 Expressions for the Longitudinal Velocity Shift $\Delta v_z$ . . . . .                        | 163        |
| 6.11 Expressions for the Transverse Velocity Shift $\Delta v_{\perp}$ . . . . .                    | 165        |
| 6.12 Expressions for the Spatial Shift $\Delta r$ . . . . .  | 167        |
| 6.13 Coulomb Scaling . . . . .   | 169        |
| Appendix 6.A Mathematics of Nearly Complete Collision Dynamics . . . . .                           | 170        |
| <b>7. Boersch Effect . . . . .</b>   | <b>177</b> |
| 7.1 Introduction . . . . .   | 177        |
| 7.2 General Aspects. . . . .   | 178        |
| 7.3 Beam Segment with a Narrow Crossover. . . . .  | 180        |
| 7.4 Homocentric Cylindrical Beam Segment . . . . .   | 193        |
| 7.5 Beam Segment with a Crossover of Arbitrary Dimensions . . . . .                                | 202        |
| 7.6 Results for Gaussian Angular and Spatial Distributions . . . . .                               | 217        |
| 7.7 Thermodynamic Limits . . . . .   | 222        |
| <b>8. Statistical Angular Deflections . . . . .</b>  | <b>225</b> |
| 8.1 Introduction . . . . .   | 225        |
| 8.2 General Aspects. . . . .   | 226        |
| 8.3 Beam Segment with a Narrow Crossover. . . . .  | 228        |
| 8.4 Homocentric Cylindrical Beam Segment . . . . .   | 235        |
| 8.5 Beam Segment with a Crossover of Arbitrary Dimensions . . . . .                                | 244        |
| 8.6 Application of the Slice Method . . . . .  | 265        |
| 8.7 Results for Gaussian Angular and Spatial Distributions . . . . .                               | 267        |

|  |            |
|--|------------|
| <b>9. Trajectory Displacement Effect . . . . .</b>                           | <b>271</b> |
| 9.1 Introduction . . . . .   | 271        |
| 9.2 General Aspects. . . . .   | 272        |
| 9.3 Homocentric Beam Segment with a Crossover . . . . .                      | 276        |
| 9.4 Homocentric Cylindrical Beam Segment . . . . .                           | 290        |
| 9.5 Beam Segment with a Crossover of Arbitrary Dimensions . . . . .          | 292        |
| 9.6 Trajectory Displacement and Angular Deflection Distribution . . . . .    | 297        |
| 9.7 Results for Gaussian Angular and Spatial Distributions . . . . .         | 300        |
| <b>10. Further Investigations on Statistical Interactions. . . . .</b>       | <b>303</b> |
| 10.1 Introduction . . . . .  | 303        |
| 10.2 Exact Approach for Off-Axis Reference Trajectories . . . . .            | 304        |
| 10.3 Approximating Approach for Off-Axis Reference Trajectories . . . . .    | 311        |
| 10.4 Nonmonochromatic Beams. . . . .   | 316        |
| 10.5 Beams in an External Uniform Axial Electrostatic Field . . . . .        | 324        |
| 10.6 Relativistic Beams. . . . .   | 329        |
| Appendix 10.A Distributions for the Average Reference Trajectory . . . . .   | 331        |
| <b>11. Space Charge Effect in Low Density Particle Beams . . . . .</b>       | <b>333</b> |
| 11.1 Introduction . . . . .  | 333        |
| 11.2 General Aspects. . . . .  | 333        |
| 11.3 Beams with Laminar Flow . . . . .                                       | 342        |
| 11.4 First Order Perturbation Theory . . . . .                               | 345        |
| 11.5 First Order Optical Properties of the Space Charge Lens . . . . .       | 347        |
| 11.6 Third Order Geometrical Aberrations of the Space Charge Lens . . . . .  | 351        |
| 11.7 Beam Segment with a Narrow Crossover. . . . .                           | 355        |
| 11.8 Homocentric Cylindrical Beam Segment . . . . .                          | 357        |
| 11.9 Addition of the Effects Generated in Individual Beam Segments . . . . . | 360        |
| <b>12. Calculation of Different Spot- and Edge-width Measures . . . . .</b>  | <b>363</b> |
| 12.1 Introduction . . . . .  | 363        |
| 12.2 Spot Width Obtained by Knife-Edge Scans . . . . .                       | 364        |
| 12.3 Edge Width of a Shaped Spot . . . . .                                   | 368        |
| 12.4 Trajectory Displacement Effect . . . . .                                | 371        |
| 12.5 Chromatic Aberration . . . . .  | 376        |
| 12.6 Spherical Aberration. . . . .   | 391        |
| 12.7 Space Charge Effect . . . . .   | 394        |
| 12.8 Results for a Truncated Gaussian Angular Distribution . . . . .         | 397        |
| <b>13. Monte Carlo Simulation of Particle Beams . . . . .</b>                | <b>401</b> |
| 13.1 Introduction . . . . .  | 401        |
| 13.2 Source Routine . . . . .  | 402        |
| 13.3 Optical Elements . . . . .  | 406        |
| 13.4 Numerical Ray Tracing . . . . .   | 409        |
| 13.5 Analytical Ray Tracing . . . . .  | 414        |
| 13.6 Simulation of Large Currents Near the Source . . . . .                  | 420        |
| 13.7 Correction of Finite-Size Effects . . . . .                             | 421        |
| 13.8 Data Analysis. . . . .  | 424        |

|   |            |
|---|------------|
| 13.9 Accuracy Limitations of the MC Program . . . . .                             | 429        |
| 13.10 MC Simulation versus Analytical Modelling . . . . .                         | 431        |
| 13.11 Program Organization and Examples . . . . .                                 | 432        |
| Appendix 13.A Random Number Routine . . . . .                                     | 439        |
| Appendix 13.B Polynomial Fit Algorithm . . . . .                                  | 442        |
| <b>14. Comparison of Analytical Theory with Monte Carlo Simulations . . . . .</b> | <b>447</b> |
| 14.1 Introduction . . . . .   | 447        |
| 14.2 General Aspects . . . . .  | 448        |
| 14.3 Voltage and Current Dependencies for a Fixed Geometry . . . . .              | 450        |
| 14.4 Geometry and Current Dependencies for a Fixed Beam Voltage . . . . .         | 455        |
| 14.5 Discussion of the Results. . . . .   | 458        |
| <b>15. Comparison of Recent Theories on Statistical Interactions . . . . .</b>    | <b>465</b> |
| 15.1 Introduction . . . . .   | 465        |
| 15.2 Boersch Effect . . . . .   | 466        |
| 15.3 Statistical Angular Deflections . . . . .                                    | 478        |
| 15.4 Trajectory Displacement Effect . . . . .                                     | 486        |
| 15.5 Conclusions . . . . .  | 491        |
| <b>16. Summary for the One-Minute Designer . . . . .</b>                          | <b>495</b> |
| 16.1 Introduction . . . . .   | 495        |
| 16.2 Physical Aspects . . . . .   | 496        |
| 16.3 Parameter Dependencies . . . . .   | 507        |
| 16.4 Equations for the Boersch Effect . . . . .                                   | 515        |
| 16.5 Equations for the Trajectory Displacement Effect . . . . .                   | 522        |
| 16.6 Equations for the Space Charge Effect . . . . .                              | 525        |
| 16.7 Addition of the Effects Generated in Individual Beam Segments . . . . .      | 527        |
| <b>References . . . . .</b>   | <b>529</b> |
| <b>Index . . . . .</b>  | <b>537</b> |
