PREFACE	ix
1. Survey	
1.1 Historical Overview	1
1.2 Basic Principles	7
1.3 Laser Experiments	22
1.4 Applications	36
1.5 Conclusion	49
2. Basic Theory	
2.1 Basic Physics	51
2.2 Spontaneous Emission	64
2.3 Electron Dynamics in a Laser Field	76
2.4 Dynamics of the Laser Field	85
2.5 Dimensionless Equations of Motion	92
3. One-dimensional Solutions	
3.1 Analytic Results	100
3.2 Numerical Simulations	119
4. Three-dimensional Effects	
4.1 Electron Motion	151
4.2 Optical Propagation	185
5. Nonuniform Wigglers	
5.1 General Theory	205
5.2 Optical Klystrons	213
5.3 Tapered Wigglers	236
5.4 Other Types of Wigglers	255
6. Wiggler Construction and Scaling	
6.1 Wiggler Construction	260
6.2 Optimization and Scaling	271
6.3 Optical Wigglers	281

7. Optics

7.1 Resonator Theory	287
7.2 Mode-Medium Interaction	306
7.3 Resonator Design	318

8. RF Linacs

8.1 Basic Concepts of RF Linacs	331
8.2 Mode Structure in RF Linacs	340
8.3 Longitudinal Effects in Accelerators	367
8.4 Transverse Effects in Accelerators	378
8.5 Wake Fields and Instabilities	394
8.6 Recirculating Machines	401
8.7 Continuing Developments	404

INDEX	410
