

CONTENTS

Foreword	xi
1972 Cryogenic Engineering Conference Board	xii
Acknowledgments	xiii

LNG Technology

A—1 LNG—U. S. and Foreign Traffic—An Overview, A. PASTUHOV, <i>Gazoccean U. S. A., Inc.</i>	1
A—2 Cryogenic Technology and Scaleup Problems of Very Large LNG Plants, J. M. BOURGUET, <i>TEAL</i>	9
A—3 Heat Transfer Problems in Liquefied Natural Gas Plants, L. E. DEAN, <i>Phillips Petroleum Company</i>	27
A—4 Explosive Boiling of Liquefied Hydrocarbon/Water Systems, T. ENGER, D. E. HARTMAN, and E. V. SEYMOUR, <i>Shell Pipe Line Corporation</i>	32

Heat Transfer

B—1 Coiled Tubular Heat Exchangers, E. E. ABADZIC and H. W. SCHOLZ, <i>Linde Aktiengesellschaft</i>	42
B—2 Effects of Maldistribution on the Performance of Multistream, Multipass Heat Exchangers, R. F. WEIMER and D. G. HARTZOG, <i>Air Products and Chemicals, Inc.</i>	52
B—3 Combined Buoyancy and Flow Direction Effects on Saturated Boiling Critical Heat Flux in Liquid Nitrogen, S. S. PAPELL, <i>NASA Lewis Research Center</i>	65
B—4 Interpretation and Correlation of Deviations from a Hydrodynamic Channel Boiling Theory of Data on Nitrogen and Hydrogen in Forced and Free Flow Boiling, S. G. SYDORIAK, <i>University of California, Los Alamos Scientific Laboratory</i>	73
B—5 Cryogenic Thermal Stratification and Interfacial Phenomena for Heated Tanks during Prolonged Orbital Flight, R. A. MOSES and D. F. GLUCK, <i>North American Rockwell, Space Division</i>	81
B—6 Miniature Uranium Fuel Plates Cooled by Liquid Helium for Irradiation Damage Studies, A. L. SOUTHERN, R. R. COLTMAN, JR., and C. E. KLABUNDE, <i>Oak Ridge National Laboratory</i> , and J. L. HEMMERICH, <i>Kernforschungsanlage—Jülich</i>	92
B—7 Development Program for a Liquid Methane Heat Pipe, W. G. FOSTER and D. O. MURRAY, <i>Lockheed Palo Alto Research Laboratory</i>	96

Insulation Systems

C—1 Heat Transfer in Microsphere Cryogenic Insulation, G. R. CUNNINGTON, <i>Lockheed Palo Alto Research Laboratory</i> , and C. L. TIEN, <i>University of California at Berkeley</i>	103
--	-----

C—2	Analysis of Thermal Diffusivity Evaluation under Transient Conditions for Powder Insulations, B. L. KNIGHT, <i>Marathon Oil Company</i> , and K. D. TIMMERHAUS and R. H. KROPSCHOT, <i>University of Colorado</i>	112
C—3	Lateral Heat Transfer in Cryogenic Multilayer Insulation, C. L. TIEN, P. S. JAGANNATHAN, and C. K. CHAN, <i>University of California at Berkeley</i>	118
C—4	An Analytical and Experimental Evaluation of Shadow Shields and Their Support Members, R. J. STOCHL and R. J. BOYLE, <i>NASA Lewis Research Center</i>	124

Fluid Mechanics

D—1	Liquid Flow Rates of Superfluid Helium II during Thermomechanical Pumping through Porous Media, T. H. K. FREDERKING, <i>University of California at Los Angeles</i> , A. ELSNER, <i>Max-Planck-Institut für Plasmaphysik</i> , and G. KLIPPING, <i>Fritz-Haber-Institut der Max-Planck-Gesellschaft</i>	132
D—2	Helium Flow through Filters, A. ELSNER, <i>Fritz-Haber-Institut der Max-Planck-Gesellschaft</i>	141
D—3	Choked Flow of Fluid Nitrogen with Emphasis on the Thermodynamic Critical Regions, R. C. HENDRICKS, R. J. SIMONEAU, and R. C. EHLERS, <i>NASA Lewis Research Center</i>	150
D—4	Geysering Inhibitor for Vertical Cryogenic Transfer Piping, F. S. HOWARD, <i>NASA John F. Kennedy Space Center</i>	162

Mechanical Properties

E—1	The Tensile Properties of Aluminum Alloys Formed at Cryogenic Temperatures, J. G. KAUFMAN and E. T. WANDERER, <i>Aluminum Company of America</i>	170
E—2	Mechanical and Physical Properties of Several Advanced Metal-Matrix Composite Materials, J. L. CHRISTIAN and M. D. CAMPBELL, <i>Convair Aerospace Division of General Dynamics</i>	175
E—3	Tensile Properties of Polyurethane and Polystyrene Foams from 76 to 300 K, R. P. REED, J. M. ARVIDSON, and R. L. DURCHOLZ, <i>NBS Institute for Basic Standards</i>	184
E—4	Compressive Properties of Polyurethane and Polystyrene Foams from 76 to 300 K, J. M. ARVIDSON, R. L. DURCHOLZ, and R. P. REED, <i>NBS Institute for Basic Standards</i>	194

Thermodynamic Properties

F—1	Development of a Method for Direct Determination of Dew Point Loci of Methane–Heavier Hydrocarbon Mixtures at Low Temperatures and Elevated Pressures, R. J. J. CHEN, W. E. A. RUSKA, P. S. CHAPPELEAR, and R. KOBAYASHI, <i>Rice University</i>	202
F—2	Thermodynamic Properties of Propane: Vapor–Liquid Coexistence Curve, T. R. DAS and P. T. EUBANK, <i>Texas A & M University</i>	208
F—3	Thermodynamic Properties of Propane: <i>PVT</i> Surface and Corresponding Thermodynamic Properties, P. T. EUBANK, T. R. DAS, and C. D. REED, JR., <i>Texas A & M University</i>	220

F—4	Cryogenic Thermal Properties from the UM Fluids Laboratory, J. E. POWERS, <i>University of Michigan</i>	234
F—5	An Equation of State for Oxygen and Nitrogen, R. T. JACOBSEN, R. B. STEWART, and A. F. MYERS, <i>University of Idaho</i>	248
F—6	Representation of <i>PVT</i> Data by Means of a Universal State Equation for Simple Pure Fluids, O. B. VERBEKE, <i>University of Leuven</i>	256
F—7	Flory–Huggins Entropy—Effect of Liquid Expansion, G. M. WILSON, <i>Brigham Young University</i>	264

Thermal Properties

G—1	Thermal Conductivity of Nylons and Apiezon Greases, T. ASHWORTH and J. E. LOOMER, <i>South Dakota School of Mines and Technology</i> , and M. M. KREITMAN, <i>University of Dayton</i>	271
G—2	Thermal Conductivity Measurements of Liquid and Dense Gaseous Methane, N. MANI and J. E. S. VENART, <i>University of Calgary</i>	280

Instrumentation

H—1	Cryogenic Instrumentation at and above Liquid Hydrogen Temperature—Present and Future, W. E. KELLER, <i>University of California, Los Alamos Scientific Laboratory</i>	289
H—2	Cryogenics below Liquid Hydrogen Temperature, G. GAMOTA, <i>Bell Laboratories</i>	301
H—3	Temperature and Level Control in a Liquid Helium II Cryostat, A. ELSNER and G. KLIPPING, <i>Fritz-Haber-Institut der Max-Planck-Gesellschaft</i>	317
H—4	Continuous Liquid Level Measurements with Time-Domain Reflectometry, J. E. CRUZ, E. H. ROGERS, and A. E. HEISTER, <i>NBS Institute for Basic Standards</i>	323
H—5	The Cryobridge, an Automatic AC Potentiometer for Resistance Thermometry at Low Power Dissipation, P. C. F. WOLFENDALE, <i>Automatic Systems Laboratories Ltd.</i>	328
H—6	The Use of Difference Thermocouples in Cryogenic Systems, S. C. FAN, <i>Commonwealth Associates Inc.</i>	334

Refrigeration

I—1	A Combustion Heated, Thermally Actuated, Vuilleumier Refrigerator, M. S. CROUTHAMEL and B. SHELPYUK, <i>RCA Corporation</i>	339
I—2	Selected Vuilleumier Refrigerator Performance Characteristics, A. SHERMAN, <i>Goddard Space Flight Center</i>	352
I—3	Refrigeration for the Livermore Superconducting Levitron, T. J. DUFFY and C. E. TAYLOR, <i>University of California, Lawrence Livermore Laboratory</i>	360
I—4	Spacecraft Compatibility of Cryogenic Refrigerators, W. L. HASKIN, <i>Air Force Flight Dynamics Laboratory, Wright-Patterson Air Force Base</i>	368

Applied Superconductivity

- J—1 MIT—EEI Superconducting Synchronous Machine, P. THULLEN, A. BEJAN, B. GAMBLE, J. L. KIRTLEY, JR., and J. L. SMITH, JR., *Massachusetts Institute of Technology*..... 372
- J—2 A 60-in.-Diameter, Levitated Superconducting Coil Thermally Shielded by Lead, J. W. WILLARD and G. D. MARTIN, *Princeton University*..... 382
- J—3 Vibration Simulation of a Space Probe Model Superconducting Energy Storage Coil, J. D. ROGERS, *University of California, Los Alamos Scientific Laboratory*..... 388
- J—4 Five-MVA Superconducting Generator Development, C. J. MOLE, T. J. FAGAN, H. E. HALLER III, D. C. LITZ, and A. PATTERSON, *Westinghouse Electric Corporation*..... 394
- J—5 Conductors for Superconducting Electrical Machines, D. W. DEIS and W. T. REYNOLDS, *Westinghouse Research Laboratories*..... 400
- J—6 Thermal Conductivity of Braided Superconductor Systems, B. DE VITO and J. E. JENSEN, *Brookhaven National Laboratory*..... 407
- J—7 Field and Current Measurements and Calculations in a Superconducting Tape-Wound Magnet, G. W. DONALDSON, *University of New South Wales*..... 416
- J—8 Critical Current of a 50 at. % Nb—Ti Alloy As a Function of Temperature and Magnetic Field, A. EL BINDARI, *Supertechnology Corporation*..... 423

Atomic and Metallic Hydrogen

- K—1 Atomic Hydrogen Stabilization by High Magnetic Fields and Low Temperatures, R. HESS, *DFVLR Institut für Energiewandlung und Elektrische Antriebe*..... 427
- K—2 Penultimate Static Pressure Containment Considerations and Possible Applications to Metallic Hydrogen Preparation, A. L. RUOFF, *Cornell University*..... 435
- K—3 Prospects for Obtaining Metallic Hydrogen with Spherical Presses, I. L. SPAIN, K. ISHIZAKI, J. M. MARCHELLO, and J. PAAUWE, *University of Maryland*..... 441
- K—4 High-Density Hydrogen Research, W. G. HOOVER, R. N. KEELER, M. VAN THIEL, B. L. HORD, R. S. HAWKE, R. J. OLNES, M. ROSS, F. J. ROGERS, and C. F. BENDER, *University of California, Lawrence Livermore Laboratory*..... 447

Cryo-Systems

- L—1 A New Thermal Means for Gas Separation, W. E. GIFFORD, *Syracuse University*, and E. D. VELTRI, *General Electric Company*..... 452
- L—2 Cryopumped, Condensed Hydrogen Jet Target for the National Accelerator Laboratory Main Accelerator, V. BARTENEV, A. KUZNETSOV, B. MOROZOV, V. NIKITIN, Y. PILIPENKO, V. POPOV, L. ZOLIN, *Institute of High Energy Physics, Serpukhov*, R. CARRIGAN, J. KLEN, E. MALAMUD, B. STRAUSS, D. SUTTER, R. YAMADA, *National Accelerator Laboratory*, R. COOL, S. OLSEN, K. GOULIANOS, *Rockefeller*

	<i>University, and I.-H. CHIANG, D. GROSS, and A. MELISSINOS, University of Rochester.</i>	460
L—3	Concentric Pulse Tube Analysis and Design, R. A. LECHNER, <i>United States Army Electronics Command</i> , and R. A. ACKERMANN, <i>Cryomech, Inc.</i>	467
L—4	Low-Temperature Nitrogen Ejector Performance, D. E. DANNEY, P. M. MCCONNELL, and T. R. STROBRIDGE, <i>NBS Institute for Basic Standards</i>	476
L—5	Long-Term Cryogenic Space Storage System, R. A. HOPKINS and W. L. CHRONIC, <i>Beech Aircraft Corporation.</i>	486
L—6	A Low-Heat-Leak, Temperature-Stabilized Support, J. R. HEIM and R. W. FAST, <i>National Accelerator Laboratory.</i>	494
L—7	Helium Conservation Using Solid Nitrogen, T. ASHWORTH, D. R. SMITH, and W. FRELS, <i>South Dakota School of Mines & Technology</i>	497
L—8	Clean Energy via Cryogenic Technology, L. O. WILLIAMS, <i>Martin Marietta Aerospace.</i>	502
