

CONTENTS

Foreword	xi
Russell B. Scott Memorial Award	xiii
1975 Cryogenic Engineering Conference Board	xiv
Awards Committees	xiv
Acknowledgments	xv

Superconducting Magnets

A—1	Superconducting Magnetic Levitation and Linear Synchronous Motor Development—The Canadian Program, D. L. ATHERTON and A. R. EASTHAM, <i>Queen's University</i>	1
A—2	Split-Pair Superconducting Magnet System for Self-Colliding Beam Experiments, C. D. HENNING, W. D. MARKIEWICZ, E. F. MAINS, R. A. ACKERMANN, J. R. THIBODEAU, and C. H. ROSNER, <i>Intermagnetics General Corporation</i> , and S. CHANNON, R. A. MILLER, B. C. MAGLICH, M. MAZARAKIS, and J. NERING, <i>Fusion Energy Corporation</i>	9
A—3	Cryogenic Design Considerations of a Superconducting Magnet System for Self-Colliding Beam Experiments, R. A. ACKERMANN, C. D. HENNING, and R. L. RHODENIZER, <i>Intermagnetics General Corporation</i>	17
A—4	Large Superconducting Solenoid for the Minimag Experiment, M. A. GREEN, <i>Lawrence Berkeley Laboratory, University of California</i>	24
A—5	Cryogenic and Mechanical Design of a Large, Six-Tesla Dipole Magnet, P. G. MARSTON, R. D. HAY, J. J. NOLAN, and W. G. LANGTON, <i>Magnetic Engineering Associates</i>	33
A—6	Superconducting Toroidal Field Magnets for a Tokamak Engineering Test Reactor, J. W. LUE and R. W. CONN, <i>University of Wisconsin</i> ...	41
A—7	A One-Meter-Diameter, AC Superconducting Coil and Fiberglass Cryostat for an Electromagnetic Geophysical Exploration System, W. V. VOGEN, B. CLAWSON, and H. F. MORRISON, <i>University of California at Berkeley</i>	51

Applied Superconductivity Systems Design

B—1	Preliminary Tests of Subscale and Full-Scale Single-Phase Sections of a 3400-MVA Superconducting Transmission Line, R. W. MEYERHOFF, <i>Union Carbide Corporation, Linde Division</i>	60
B—2	Cryogenic Design for Large Superconductive Energy Storage Magnets, M. A. HILAL and G. E. MCINTOSH, <i>University of Wisconsin</i>	69
B—3	Engineering Considerations of the Toroidal Magnet and Dewar for UWMAK-11—A Wisconsin Tokamak Fusion Reactor Design, I. N. SVIATOSLAVSKY, W. C. YOUNG, and J. W. LUE, <i>University of Wisconsin</i>	78

B—4	Current Averaging and Coil Segmentation in the Protection of Large Toroidal Superconducting Magnet Systems, H. T. YEH, J. N. LUTON, and J. E. SIMPKINS, <i>Oak Ridge National Laboratory</i>	88
B—5	Dielectric Strength of Liquid Helium under Strongly Inhomogeneous Field Conditions, M. M. MENON, S. W. SCHWENTERLY, W. F. GAUSTER, R. H. KERNOHAN, and H. M. LONG, <i>Oak Ridge National Laboratory</i>	95
B—6	Electrical Breakdown and Tracking Characteristics of Pulsed High Voltages in Cryogenic Helium and Nitrogen, R. A. HAARMAN and K. D. WILLIAMSON, Jr., <i>Los Alamos Scientific Laboratory, University of California</i>	102
B—7	Temperature Excursions During Loss of Magnet Coolant Accidents with Thermalization of Energy of Large Superconducting Solenoids, R. C. AMAR, T. H. K. FREDERKING, and W. E. KASTENBERG, <i>University of California at Los Angeles</i>	109

Superconductive Energy Systems

C—1	Applications of Superconducting Magnets to Energy with Particular Emphasis on Fusion Power, P. KOMAREK, <i>Institut für Experimentelle Kernphysik of the University and the Kernforschungszentrum Karlsruhe</i>	115
C—2	Configurational Design of Superconductive Energy Storage Magnets, R. W. MOSES, Jr., <i>University of Wisconsin</i>	140
C—3	Energy Transfer Methods Between Superconducting Magnets, R. S. RAMSHAW and E. P. DICK, <i>University of Waterloo</i>	149
C—4	Element Rating and Coupling Harmonics in a Superconductive Energy Transfer System, R. S. RAMSHAW and E. P. DICK, <i>University of Waterloo</i>	157

Energy Systems

D—1	Economic Aspects of U. S. Energy Independence in the Coming Decade, K. D. TIMMERHAUS, <i>University of Colorado</i> , and D. H. WEITZEL, <i>National Bureau of Standards</i>	166
D—2	Cryogenic Fuel Systems for Motor Vehicles, J. J. HIBL, <i>Beech Aircraft Corporation</i>	180

Refrigeration

E—1	Reliability Aspects of Cryogenic Refrigeration, W. H. HOGAN, <i>Consulting Engineer</i>	187
E—2	A New Helium Refrigerator for Superconducting Cable Systems, J. W. TERBOT, <i>Union Carbide Corporation, Linde Division</i>	190
E—3	Supercritical Helium Refrigerator for Superconducting Power Transmission Cable Studies, J. W. DEAN and J. E. JENSEN, <i>Brookhaven National Laboratory</i>	197
E—4	Low-Temperature Losses in Supercritical Helium Refrigerators, D. E. DANNEY, <i>Cryogenics Division, Institute for Basic Standards</i>	205

E—5	New Type Screw Compressor for Helium Refrigerators and Liquefiers, M. ISHIZUKA and H. YONEMITSU, <i>Suzuki Shokan Company Ltd.</i> , and N. INO and K. KASAHARA, <i>Mayekawa Manufacturing Company Ltd.</i>	213
E—6	Dry Helium Compressor for Refrigeration Systems, Y. ISHIZAKI and M. AKIYAMA, <i>University of Tokyo</i> , and J. IGUCHI and S. MATSUMOTO, <i>The Japan Steel Works, Ltd.</i>	219
E—7	Performance Tests of a Reciprocating Liquid Helium Pump Used in Forced Convection Cooling, T. W. SCHUCK, <i>Gardner Cryogenics</i>	224
E—8	A Large-Scale Pumped and Subcooled Liquid Helium Cooling System, P. C. VANDER AREND and S. T. STOY, <i>Cryogenic Consultants, Inc.</i> , and D. RICHIED, <i>Fermi National Accelerator Laboratory</i> . .	230
E—9	High-Purity Nitrogen Cooling System of an In-Core Irradiation Cryostat for a Triga Mark II Reactor, J. JOHANSSON, <i>Reactor Laboratory, Technical Research Centre of Finland</i>	237

Instrumentation

F—1	Surface Crystalline Carbon Temperature Sensor, D. PETRAC, J. GATEWOOD, and P. MASON, <i>Jet Propulsion Laboratory</i>	242
F—2	Sensor for Distinguishing Liquid-Vapor Phases of Superfluid Helium, D. PETRAC, J. GATEWOOD, and P. MASON, <i>Jet Propulsion Laboratory</i>	244

Heat Transfer and Fluid Dynamics

G—1	Heat Exchangers for Vapor-Cooled Conducting Supports of Cryostats, A. BEJAN and J. L. SMITH, Jr., <i>Massachusetts Institute of Technology</i>	247
G—2	The Cooling of Long Conduits, Y. L. BLINKOV, A. Y. SAVELYEV and S. I. SMIRNOV, <i>Krzhizhanovsky Power Engineering Institute</i>	257
G—3	Heat Transfer in a Cryosurgery Probe Tip, R. F. BARRON and B. R. HOLLIFIELD, <i>Louisiana Tech University</i>	268
G—4	Heat Transfer in Transition Boiling of Cryogenic Liquids, E. K. KALININ, I. I. BERLIN, V. V. KOSTYUK, and E. M. NOSOVA, <i>Moscow Aviation Institute</i>	273
G—5	Liquid Neon Heat Transfer as Applied to a 30-Tesla Cryomagnet, S. S. PAPELL and R. C. HENDRICKS, <i>NASA Lewis Research Center</i>	278
G—6	Free Convection Film Boiling from a Flat, Horizontal Surface in Saturated He II, K. R. BETTS and A. C. LEONARD, <i>Royal Military College of Canada</i>	282
G—7	Thermomechanical Flow Rates of Liquid Helium II Through Channels of Large Hydraulic Diameter, W. C. DYKSTRA, R. C. AMAR, and T. H. K. FREDERKING, <i>University of California at Los Angeles</i>	293
G—8	Maximum Two-Phase Flow Rates of Subcooled Nitrogen Through a Sharp-Edged Orifice, R. J. SIMONEAU, <i>NASA Lewis Research Center</i>	299

LNG Technology

H—1	Experience of Tokyo Gas with In-Ground LNG Tanks, Y. MIYATA, <i>Tokyo Gas Co., Ltd.</i>	307
-----	---	-----

H—2	Geometric Stability of Cylindrical, Double-Walled Cryogenic Tank Structures, G. E. PADAWER, <i>Cabot Corporation</i>	315
H—3	A Model for LNG Tank Rollover, A. E. GERMELES, <i>Cabot Corporation</i>	326
H—4	Distrigas LNG Barge Operating Experience, N. E. FRANGESH, <i>Consulting Engineer</i> , and G. A. RANDALL, Jr., <i>Distrigas Corporation</i>	337
H—5	Inert Gas Generating System for Liquefied Natural Gas Carriers, G. M. MEYER, <i>Consultant</i>	346
H—6	Running-Film Vaporizer for LNG, H. H. WEST and G. L. PUCKETT, <i>University Engineers, Inc.</i>	359

Safety

J—1	Planning for Safety, T. E. IJAMS and B. A. WOLFE, <i>Boeing Engineering and Construction</i>	367
J—2	Safety Aspects of LNG Spills on Land, D. N. GIDEON, A. A. PUTNAM, and A. R. DUFFY, <i>Battelle Columbus Laboratories</i> ..	377
J—3	Dispersion of Hydrogen or Methane Fuels Released into an Automobile Interior, J. M. ARVIDSON, J. HORD, and D. B. MANN, <i>Cryogenics Division, Institute for Basic Standards</i>	387

Cryo-Bioengineering Applications

K—1	The Application of Cryogenics to the Reversible Storage of Biomaterials, E. G. CRAVALHO, <i>Massachusetts Institute of Technology</i>	399
K—2	Recent Advances and Applications of Freeze-Drying Technology, D. GREIFF and T. W. G. ROWE, <i>The Medical College of Wisconsin</i>	418

Cryo-Technology Applications

L—1	Miniature Cryogenic Coolers, S. B. HORN, T. T. ACORD, P. K. RAIMONDI, and B. T. WALTERS, <i>U.S. Army Night Vision Laboratory</i>	428
L—2	Orbital Performance of a Solid Cryogen Cooling System for a Gamma-Ray Detector, T. C. NAST, G. A. BELL, and R. K. WEDEL, <i>Lockheed Palo Alto Research Laboratory</i>	435
L—3	Nitrogen Removal and Raw Helium Recovery in Natural Gas Processing Plants, R. WUENSCH, <i>Lotepro Engineering & Construction Ltd.</i>	443
L—4	Heavy Water Production by Cryogenic Processing, W. BALDUS, <i>Linde Aktiengesellschaft</i> , and K. C. MILNE, <i>Lotepro Engineering & Construction Ltd.</i>	450
L—5	Techniques for Obtaining Cryogenic Laser Fusion Targets by Condensing Fuel Gases in Microshell™ Pellets, T. M. HENDERSON, R. B. JACOBS, D. E. SOLOMON, and G. H. WUTTKE, <i>KMS Fusion, Inc.</i> ..	455

Fluid Properties

M—1	Recent Developments in the Theory of Fluid Mixtures, T. W. LELAND, <i>Rice University</i>	466
-----	---	-----

M—2	On the Consistency of Liquid–Vapor Equilibria Data for Binary Mixtures of Methane with the Light Paraffin Hydrocarbons, W. R. PARRISH and M. J. HIZA, <i>Cryogenics Division, Institute for Basic Standards</i>	485
M—3	Excess Enthalpies for Some Binary Liquid Mixtures of Low-Molecular-Weight Alkanes, R. C. MILLER, <i>The University of Wyoming</i> , and L. A. K. STAVELEY, <i>University of Oxford</i>	493
M—4	Viscosity of Cryogenic Liquid Mixtures (Including LNG) from Corresponding States Methods, J. M. HAILE, K. C. MO, and K. E. GUBBINS, <i>University of Florida</i>	501
M—5	Solubility of Solid <i>n</i> -Butane and <i>n</i> -Pentane in Liquid Methane, G. P. KUEBLER and C. MCKINLEY, <i>Air Products and Chemicals, Inc.</i>	509
M—6	Orthobaric Liquid Densities of Normal Butane from 135 to 300 K as Determined with a Magnetic Suspension Densimeter, W. M. HAYNES and M. J. HIZA, <i>Cryogenics Division, Institute for Basic Standards</i> ...	516
M—7	Thermophysical Properties Data Research on Compressed and Liquefied Gases at the NBS Cryogenics Division, D. E. DILLER, <i>Cryogenics Division, Institute for Basic Standards</i>	522
M—8	A Method for the Selection of a Functional Form for a Thermodynamic Equation of State Using Weighted Linear Least Squares Stepwise Regression, R. T. JACOBSEN and R. B. STEWART, <i>University of Idaho</i> , R. W. CRAIN, Jr., <i>Washington State University</i> , G. L. ROSE, <i>McKellip Engineering, Inc.</i> , and A. F. MYERS, <i>NASA Flight Research Center, Computation and Simulation Division</i>	532
