Foreword	xiii
W. H. Hogan Memorial	xiv
Russell B. Scott Memorial Award	xvi
1977 Cryogenic Engineering Conference Board	xvii
Awards Committees	xvii
Acknowledgments	xviii

Superconductivity Applications—MHD Magnets

A—1	Commercial Realization of MHD—A Challenge for Superconducting Magnets, V. A. OVCHARENKO, <i>Centre for Natural Resources, Energy and Transport, United Nations</i>	1
A—2	Cryogenic Aspects of the U. S. SCMS Superconducting Dipole Magnet for MHD Research, R. C. NIEMANN, S. T. WANG, J. D. GONCZY, K. MATAYA, and W. J. PELCZARSKI, <i>Argonne National Laboratory</i> , P. SMELSER, <i>Consulting Engineer</i> , and P. C. VANDER AREND and S. STOY, <i>Cryogenic Consultants, Inc.</i>	9
A—3	Fabrication Experiences and Operating Characteristics of the U. S. SCMS Superconducting Dipole Magnet For MHD Research, S. T. WANG, R. C. NIEMANN, R. L. KUSTOM, P. SMELSER, W. J. PELCZARSKI, L. R. TURNER, E. W. JOHANSON, E. F. KRAFT, S. H. KIM, J. D. GONCZY, H. F. LUDWIG, K. F. MATAYA, W. E. LAFAVE, F. J. LAWRENTZ and F. P. CATANIA, <i>Argonne National Laboratory</i>	17
A—4	Design Study of Superconducting Magnets for a Combustion Magnetohydrodynamic (MHD) Generator, R. J. THOME, J. W. AYERS, and T. M. HRYCAJ, <i>Magnetic Corporation of America</i> , and J. A. BURKHART, <i>NASA Lewis Research Center</i>	28
A—5	Design of Superconducting Magnets for Full-Scale MHD Generators, A. M. HATCH, J. ZAR, and F. E. BECKER, <i>Avco Everett Research Laboratory, Inc.</i> , and R. RHODENIZER, D. MARKIEWIECZ, and R. ACKERMAN, <i>Intermagnetics General Corporation</i> , and R. D. HAY, W. LANGTON, and E. J. RAPPAPORT, <i>Magnetic Engineering Associates</i>	37

Superconductivity Applications—Energy Storage

B—1	0.54-MJ Superconducting Magnetic Energy Transfer and Storage, J. D. ROGERS, D. J. BLEVINS, J. D. G. LINDSAY, G. A. MIRANDA, C. E. SWANNACK, D. M. WELDON, and J. J. WOLLAN, <i>Los Alamos Scientific Laboratory, University of California</i> , and C. J. MOLE, E. MULLAN, P. W. ECKELS, H. E. HALLER III, M. A. JANOCKO, S. A. KARPATY, D. C. LITZ, P. REICHNER, Z. N. SANJANA, and M. S. WALKER, <i>Westinghouse Research and Development Center</i>	48
-----	--	----

B—2	A Superconducting 0.54-MJ Pulsed Energy Storage Coil, C. J. MOLE, D. W. DEIS, P. W. ECKELS, H. E. HALLER III, M. A. JANOCKO, S. A. KARPATY, D. C. LITZ, E. MULLAN, P. REICHNER, Z. N. SANJANA, and M. S. WALKER, <i>Westinghouse Research and Development Center</i>	57
B—3	Design and Development of a Large Superconducting Solenoid with Aluminum-Stabilized Superconductors, S. T. WANG, R. P. SMITH, S. H. KIM, and J. J. PEERSON, <i>Argonne National Laboratory</i>	70
B—4	Conductor for LASL 10-MWhr Superconducting Energy Storage Coil, A. PETROVICH, M. S. WALKER, B. A. ZEITLIN, and J. D. SCUDIÈRE, <i>Intermagetics General Corporation</i> , and R. I. SCHERMER, <i>Los Alamos Scientific Laboratory, University of California</i>	78
B—5	Constant-Tension and Constant-Field Solenoids, M. N. EL-DERINI, R. W. BOOM, and M. A. HILAL, <i>University of Wisconsin at Madison</i>	88
B—6	Results from a Model System of Superconducting Solenoids and Phase-Shifting Bridge for Pulsed Power Studies for Proposed Tokamak EF Coils, R. E. FUJA, R. L. KUSTOM, and R. P. SMITH, <i>Argonne National Laboratory</i>	97
B—7	Pulsed DC Losses in Superconducting Solenoids, J. T. BROACH and W. D. LEE, <i>U. S. Army Mobility Equipment Research and Development Command</i>	104
B—8	Dielectric Strength of Helium Vapor and Liquid at Temperatures between 1.4 and 4.2 K, K. F. HWANG, <i>University of Wisconsin at Madison</i>	110

Superconductivity Applications—Rotating Machinery

C—1	Experimental Simulation of Cryogenic System for a Large Superconducting Rotor, K. A. TEPPER, J. L. SMITH, JR., and F. C. RUMORE, <i>Massachusetts Institute of Technology</i>	118
C—2	Development of a Helium Transfer Coupling for a Superconducting Generator Rotor, B. B. GAMBLE, <i>General Electric Company</i>	125
C—3	High-Speed Helium Transfer System—Evaluation and Testing, A. PATTERSON and R. D. BLAUGHER, <i>Westinghouse Research and Development Center</i>	132
C—4	A Bonded-Strain-Gage Pressure Transducer for High-Speed Liquid Helium Temperature Rotors, R. A. BUKOVICH, J. L. SMITH, JR., and K. A. TEPPER, <i>Massachusetts Institute of Technology</i>	140
C—5	A Method for Calculating Temperatures in Superconducting Rotors Cooled with Two-Phase Helium, A. HOFMANN and CH. SCHNAPPER, <i>Kernforschungszentrum Karlsruhe</i>	146
C—6	Temperature Distribution in Rotating Thermosiphons Containing Two-Phase Helium in Nonisentropic Equilibrium, A. HOFMANN and CH. SCHNAPPER, <i>Kernforschungszentrum Karlsruhe</i>	151

Superconductivity Applications—Magnet Technology

D—1	Basic Study of Superconducting Electromagnetic Thrust Device for Propulsion in Seawater, Y. SAJI, M. KITANO, and A. IWATA, <i>Kobe University of Mercantile Marine</i>	159
D—2	Design and Prototype Fabrication of a 30-Tesla Cryogenic Magnet, G. M. PROK, M. C. SWANSON, and G. V. BROWN, <i>NASA Lewis Research Center</i>	170
D—3	Production Test of Energy Doubler Magnets, R. YAMADA, M. E. PRICE, and D. A. GROSS, <i>Fermi National Accelerator Laboratory</i>	178
D—4	Cryogenic Aspects of a Demountable Toroidal Field Magnet System for Tokamak-Type Fusion Reactors, S. Y. HSIEH, J. POWELL, and J. LEHNER, <i>Brookhaven National Laboratory</i>	185
D—5	Recovery Velocities for Composite Superconductors, R. L. WILLIG, <i>Magnetic Engineering Associates</i>	197
D—6	Effect of Conductor Self-Shielding on Eddy Current Losses, W. Y. CHEN, J. R. PURCELL, and W. E. TOFFOLO, <i>General Atomic Company</i>	204
D—7	Effects of Electrical Shorts on Cryostatic Stable Superconducting Magnets, S. H. KIM, S. T. WANG, and L. R. TURNER, <i>Argonne National Laboratory</i>	214
D—8	High-Current Power Leads for Tokamak Fusion Reactor Superconducting Magnets, R. K. THOMAS and J. R. PURCELL, <i>General Atomic Company</i> , and R. W. BOOM, <i>University of Wisconsin at Madison</i>	219

Cooling Superconducting Systems

E—1	Vapor Locking as a Limitation to the Stability of Composite Conductors Cooled by Boiling Helium, J. W. LUE, J. R. MILLER, and L. DRESNER, <i>Oak Ridge National Laboratory</i>	226
E—2	Cryogenic Recovery Analysis of Forced-Flow Supercritical-Helium-Cooled Superconductors, A. Y. LEE, <i>Westinghouse Electric Corporation</i>	235
E—3	Nonstationary Heat Transfer and Temperature State of Cryogenic Cable at Short-Circuit Conditions, V. M. EROSHENKO, A. D. STAROSTIN, and L. A. YASKIN, <i>The Krzhizhanovsky Power Engineering Institute</i>	245
E—4	Temperature Profiles in a Long Gaseous-Helium-Cooled Tube, J. W. DEAN, W. STEWART, and J. K. HOFFER, <i>Los Alamos Scientific Laboratory, University of California</i>	250
E—5	Design and Development of Cryostable Superconducting Ohmic Heating Coils for a Tokamak, S. T. WANG, S. H. KIM, L. R. TURNER, K. M. THOMPSON, W. F. PRAEG, C. I. KRIEGER, and R. L. KUSTOM, <i>Argonne National Laboratory</i>	255

Heat Transfer

F—1	Two-Phase Choked Flow in Tubes with Very Large L/D , R. C. HENDRICKS and R. J. SIMONEAU, <i>NASA Lewis Research Center</i> ..	265
-----	---	-----

F—2	Cryogenic Fluid Flow Heat Transfer in a Porous Heat Exchanger, L. L. VASILIEV, G. I. BOBROVA, S. K. VINOKUROV, and V. A. MORGUN, <i>The Luikov Heat and Mass Transfer Institute, Byelorussian Academy of Sciences</i>	276
F—3	Boiling Incipience and Convective Boiling of Neon and Nitrogen, S. S. PAPELL and R. C. HENDRICKS, <i>NASA Lewis Research Center</i>	284
F—4	Effect of Ice Contamination on Liquid Nitrogen Drops in Film Boiling, G. J. SCHOESSOW, C. E. CHMIELEWSKI, and K. J. BAUMEISTER, <i>NASA Lewis Research Center</i>	295
F—5	Estimating Surface Temperature in Forced Convection Nucleate Boiling—A Simplified Method, R. C. HENDRICKS and S. S. PAPELL, <i>NASA Lewis Research Center</i>	301
F—6	Film Boiling of Liquid Nitrogen on a Sphere in an Enclosure, R. F. BARRON, <i>Louisiana Tech University</i> , and A. K. GORGOLIS, <i>Riley-Beaird, Inc.</i>	305
F—7	Effects of Natural Convection on Heat Transfer in Porous Cryogenic Insulations, T. R. DALI and J. C. CHATO, <i>University of Illinois</i>	313

Heat Transfer in Helium

G—1	Heat Transfer to Helium in the Near-Critical Region, F. IRIE, T. MATSHUSHITA, and M. TAKEO, <i>Kyushu University</i> , and G. KLIPPING, K. LÜDERS, and U. RUPPERT, <i>Freie Universität Berlin</i>	326
G—2	Heat Transfer to Subcooled Liquid Helium, E. A. IBRAHIM, R. W. BOOM, and G. E. MCINTOSH, <i>University of Wisconsin at Madison</i>	333
G—3	Kapitza Conductance of Aluminum and Heat Transport from a Flat Surface through a Large-Diameter Tube to Saturated Helium II, S. W. VAN SCIVER, <i>University of Wisconsin at Madison</i>	340
G—4	Oscillations and Hysteresis of Helium during Lambda Transition above the Thermodynamic Critical Pressure in the Presence of Heat Flow, S. CASPI, J. Y. LEE, and T. H. K. FREDERKING, <i>University of California at Los Angeles</i>	349
G—5	Helium II in Low-Temperature and Superconductive Magnet Engineering, G. BON MARDION, G. CLAUDET, P. SEYFERT, and J. VERDIER, <i>Centre d'Etudes Nucléaires de Grenoble</i>	358
G—6	Measurements of Axial Heat Transport in Helium II with Forced Convection, W. W. JOHNSON and M. C. JONES, <i>National Bureau of Standards</i>	363

Mass Transfer

H—1	Frost Density Measurements on Vertical Cylinders by Gamma-Ray Attenuation, C. J. CREMERS and O. J. HAHN, <i>University of Kentucky</i> , and J. H. SKORUPSKI, <i>Eaton Corporation</i>	371
-----	--	-----

H—2	Computational Simulation of Rectifier for an Air Separation Plant Using the Newton–Raphson Technique, Y. KAWASE and Y. HIROSE, <i>Tokyo Metropolitan University</i> and A. TOYAMA and I. FUNADA, <i>Kobe Steel, Ltd.</i>	376
H—3	A New Pump for Liquefied Inert Gases, W. HARTWIG, <i>Lotepro Corporation</i> , G. KRAFFT, <i>Kernforschungszentrum Karlsruhe</i> , K. PETERSEN, <i>Linde Aktiengesellschaft Munich</i> , and E. TURNWALD, <i>Linde Aktiengesellschaft Schalchen</i>	386
H—4	Determination of the Flow Velocity of a Cryogenic Fluid by Use of a Correlation Technique, O. TSUKAMOTO and K. HARADA, <i>Yokohama National University Tokiwadai Hodogaya-ku</i>	391

Refrigeration and Liquefaction

J—1	Reliability and Repair Policy Assessment for Long-Duration Operation of Helium Refrigeration Systems, J. P. BAUMGARTNER and P. G. WAPATO, <i>AiResearch Manufacturing Company of California</i>	397
J—2	The Stirling Cycle Cooler: Approaching One Year of Maintenance-Free Life, C. BALAS, <i>North American Philips Corporation</i> , and C. S. LEFFEL and C. A. WINGATE, <i>The Johns Hopkins University</i>	411
J—3	Helium Refrigeration System for Fermilab Energy Doubler, P. C. VANDER AREND, <i>Cryogenic Consultants, Inc.</i>	420
J—4	Thermodynamic Optimization of the Helium Multiengine Claude Refrigeration Cycle, A. KHALIL, <i>University of Wisconsin at Madison</i> , and G. E. McINTOSH, <i>Cryenco Division, Helix Technology Corporation</i>	431
J—5	Cryogenic Refrigeration Concepts Utilizing Adsorption Pumping in Zeolites, W. H. HARTWIG, <i>The University of Texas at Austin</i> . .	438
J—6	A Regenerator with an Iron Whisker Matrix, F. X. EDER, <i>Bavarian Academy of Sciences</i>	448
J—7	Thermodynamic and Mechanical Design of the FNAL Central Helium Liquefier, W. M. TOSCANO and R. J. KUDIRKA, <i>Process Systems, Division of Helix Technology Corporation</i>	456
J—8	A Conceptual Design of a Helium Liquefaction System for a 300-MVA Superconducting Generator, W. M. TOSCANO, R. W. JOHNSON, and R. N. MORRIS, <i>Process Systems, Helix Technology Corporation</i>	467

Cryogenic Techniques

K—1	A New Laser Aerosol Detector and Monitor for Use on High-Pressure Gas Streams, W. E. HARRISON, JR., <i>Brookhaven National Laboratory</i> , and F. M. SHOFNER and A. C. MILLER, JR., <i>Process Particulate Monitors, Inc.</i>	477
K—2	Helium Storage at High Density and Discharge at High Flow Rates, D. E. DANNEY, <i>National Bureau of Standards</i>	486

K—3	Fast-Response Cryogenic Calorimeter Containing a 52-Kilogram Radiation Absorber, P. J. BENDT and J. L. YARNELL, <i>Los Alamos Scientific Laboratory, University of California</i>	496
K—4	Alternate Sets of Fixed Points for Simplified Realizations of IPTS-68, F. PAVESE, G. DEMONTI, and D. FERRI, <i>Istituto di Metrologia-G. Colonnetti</i>	503
K—5	Ultra-Low Dynamic Current Measurements with an RF SQUID, P. CARELLI, I. MODENA, and G. L. ROMANI, <i>Laboratorio de Elettronica dello Stato Solido-CNR</i>	512

LNG Design

L—1	Reversible LNG, T. H. MALYN and M. R. CREED, <i>British Gas Corporation</i>	515
L—2	Economic Removal of Nitrogen from LNG, J-P. G. JACKS and J. C. McMILLAN, <i>Pullman Kellogg, A Division of Pullman Incorporated</i>	524
L—3	Internally Insulated Cryogenic Pipelines, G. WALKER, <i>The University of Calgary</i> , and J. STUCHLY, <i>Canuck Engineering Ltd.</i> . .	531
L—4	Solubility Enhancement of Solid Hydrocarbons in Liquid Methane Due to the Presence of Ethane, D. L. TIFFIN, K. D. LUKS, and J. P. KOHN, <i>University of Notre Dame</i>	538
L—5	Predicted Solubilities of Methanol in Compressed Natural Gas at Low Temperatures and High Pressures, K. W. WON, <i>Fluor Engineers and Constructors, Inc.</i>	544

LNG Properties

M—1	Thermodynamic Properties of Natural Gas, Petroleum Gas, and Related Mixtures: Enthalpy Predictions, J. MOLLERUP, <i>Instituttet for Kemiteknik, Danmarks Tekniske Højskole</i>	550
M—2	Prediction of the Transport Properties of Natural Gas and Similar Mixtures, J. C. RAINWATER and H. J. M. HANLEY, <i>National Bureau of Standards</i>	561
M—3	A Calculational Method for Obtaining the Density of a Liquefied Natural Gas, J. E. ORRIT and J. M. LAUPRETRE, <i>Société Nationale Elf Aquitaine</i>	566
M—4	Density of Liquefied Natural Gas Components, J. E. ORRIT and J. M. LAUPRETRE, <i>Société Nationale Elf Aquitaine</i>	573
M—5	VLE Calculations Using Temperature-Dependent k_{12} Values for Methane-Containing Binary Systems, B. C.-Y. LU, W. K. CHUNG, M. KATO, and Y.-J. HSIAO, <i>University of Ottawa</i>	580
M—6	Liquid Mixture Excess Volumes and Total Vapor Pressures Using a Magnetic Suspension Densimeter with Compositions Determined by Chromatographic Analysis: Methane Plus Ethane, M. J. HIZA and W. M. HAYNES, <i>National Bureau of Standards</i> . . .	594
M—7	Vapor Pressures and Heats of Vaporization for Propane and Propene from 50 K to the Normal Boiling Point, D. W. YARBROUGH and C.-H. TSAI, <i>Tennessee Technological University</i> .	602

- M—8 On the Nonanalytic Equation of State for Propane, R. D. GOODWIN, *National Bureau of Standards* 611

Cryogenic Applications—Space Technology

- N—1 Thermal Analysis of a Helium II-Cooled Infrared Telescope for Spacelab, F. D. HEIDT, K.-P. BARTHOLOMÄ, and H. SCHWILLE, *Dornier System GmbH* 619
- N—2 Liquid Helium-Cooled Infrared Telescope for Astronomical and Atmospheric Measurements from Spacelab, D. LEMKE, *Max-Planck-Institut für Astronomie*, and G. KLIPPING, *Fritz-Haber-Institut der Max-Planck-Gesellschaft*, and N. RÖMISCH, *DFVLR-BPT* 628
- N—3 Operating Performance of He³-Cooled Bolometers, G. CHANIN and J. P. TORRE, *Service d'Aéronomie du C.N.R.S.* 634
- N—4 Test Flight Results of a Balloon-Borne He³ Cryostat, J. P. TORRE and G. CHANIN, *Service d'Aéronomie du C.N.R.S.* 640
- N—5 Development of a Burst Disk with a Temperature-Insensitive Vacuum Seal for Space Shuttle Propellant Lines, D. MARTINDALE, *Cryolab Inc.* 644

Cryogenic Applications—Cryopumping

- O—1 Large-Scale Cryopumping for Controlled Fusion, L. C. PITTENGER, *Lawrence Livermore Laboratory, University of California* 648
- O—2 Performance of a Cryopump Cooled by a Small Closed-Cycle 10-K Refrigerator, R. C. LONGSWORTH, *Air Products and Chemicals, Inc.* 658

Cryogenic Applications—Laser Fusion

- Q—1 A New Method for Producing Cryogenic Laser Fusion Targets, J. R. MILLER, *Los Alamos Scientific Laboratory, University of California* 669
- Q—2 Development of Cryogenic Targets for Laser Fusion, E. R. GRILLY, *Los Alamos Scientific Laboratory, University of California* 676
- Q—3 Cryogenic Pellets for Laser-Fusion Research—Theoretical and Practical Considerations, T. M. HENDERSON and R. J. SIMMS, *KMS Fusion, Inc.*, and R. B. JACOBS, *Robert B. Jacobs Associates, Inc.* 682
- Q—4 Point-Contact Conduction-Cooling Technique and Apparatus for Cryogenic Laser Fusion Pellets, T. M. HENDERSON, R. B. JACOBS, D. L. MUSINSKI, R. J. SIMMS, and G. H. WUTTKE, *KMS Fusion, Inc.* 690
- Q—5 Cryogenic Handling of Polymeric Laser-Fusion Pellets, T. M. HENDERSON, D. L. MELMOTH, D. L. MUSINSKI, T. R. PATTINSON, and G. H. WUTTKE, *KMS Fusion, Inc.* 699

Q—6	Equilibrium Constants for the Hydrogen Isotopic Self-Exchange Reactions in the 4.2- to 50-K Temperature Range, J. W. PYPER and P. C. SOUERS, <i>Lawrence Livermore Laboratory, University of California</i>	705
-----	---	-----

Cryogenic Applications—Health and Safety

R—1	Cryogenic Freezing of Foods, O. FENNEMA, <i>University of Wisconsin at Madison</i>	712
R—2	Safety with Cryogenic Systems, K. D. TIMMERHAUS and T. M. FLYNN, <i>University of Colorado</i>	721
