Samuel C. Collins Award .....	xiv
1979 Cryogenic Engineering Conference Board .....	xv
Awards Committees .....	xv
Acknowledgments .....	xvi

## Superconductivity Applications—MHD and Fusion Magnets

A—1	Superconducting MHD Magnet Engineering Program, P. G. MARSTON, A. M. DAWSON, D. B. MONTGOMERY, and J. E. C. WILLIAMS, <i>Francis Bitter National Magnet Laboratory</i> .....	1
A—2	Impact of High-Current Operation on the Cost of Superconducting Magnet Systems for Large-Scale MHD Applications, R. J. THOME, R. D. PILLSBURY, H. R. SEGAL, and B. O. PEDERSON, <i>Magnetic Corporation of America</i> .....	12
A—3	Final Design of a Superconducting MHD Magnet for the Coal-Fired Flow Facility at the University of Tennessee Space Institute, S.-T. WANG, L. R. TURNER, L. GENENS, W. PELCZARSKI, J. HOFFMAN, J. GONCZY, H. LUDWIG, R. C. NIEMANN, K. F. MATAYA, and E. KRAFT, <i>Argonne National Laboratory</i> , and W. YOUNG, <i>University of Wisconsin</i> .....	19
A—4	Cryogenic Aspects of the UTSI-CFFF Superconducting Dipole Magnet for MHD Research, R. C. NIEMANN, S.-T. WANG, J. W. DAWSON, L. GENENS, R. P. SMITH, L. R. TURNER, J. D. GONCZY, J. HOFFMAN, and K. F. MATAYA, <i>Argonne National Laboratory</i> , P. SMELSER, <i>Independent Consultant</i> , and P. C. VANDER AREND and S. STOY, <i>Cryogenic Consultants, Inc.</i> .....	30
A—5	Safety Analysis of the UTSI-CFFF Superconducting Magnet, L. R. TURNER, S.-T. WANG, and R. P. SMITH, <i>Argonne National Laboratory</i> , P. C. VANDER AREND, <i>Cryogenic Consultants, Inc.</i> , and Y.-H. HSU, <i>General Atomic Company</i> .....	39
A—6	Engineering Aspects of Cryogenic Laser-Fusion Targets, D. L. MUSINSKI, T. M. HENDERSON, R. J. SIMMS, and T. R. PATTINSON, <i>KMS Fusion, Inc.</i> , and R. B. JACOBS, <i>R. B. Jacobs Associates, Inc.</i> .....	49

## Superconductivity Applications—Energy Transfer and Storage

B—1	Energy Transfer in a System of Superconductive Magnets, M. MASUDA, T. SHINTOMI, and K. ASAJI, <i>National Laboratory for High Energy Physics</i> .....	61
-----	--	----

B—2	Thermal Cycle Tests of a Modeled Superconducting Transmission Line, C. F. SINDT and P. R. LUDTKE, <i>NBS Thermophysical Properties Division</i> .....	69
B—3	Design of a 400-kJ Pulsed Energy Storage Coil, S. K. SINGH, C. J. HEYNE, D. T. HACKWORTH, M. A. JANOCKO, P. W. ECKELS, and J. H. MURPHY, <i>Westinghouse Electric Corporation</i> .....	81
B—4	Operating Characteristics of a 1.5-MJ Pulsed Superconducting Coil, S. H. KIM, S.-T. WANG, and M. LIEBERG, <i>Argonne National Laboratory</i> .....	90
B—5	3-MJ Magnet for Superconductive Energy Storage, T. SHINTOMI, M. MASUDA, H. SATO, and K. ASAJI, <i>National Laboratory for High Energy Physics</i> .....	98
B—6	Conceptual Design of a 20-MJ Superconducting Forced-Cooled Ohmic-Heating Coil, S. K. SINGH, J. H. MURPHY, M. A. JANOCKO, H. E. HALLER, D. C. LITZ, and P. W. ECKELS, <i>Westinghouse Electric Corporation</i> , and J. D. ROGERS and P. THULLEN, <i>Los Alamos Scientific Laboratory</i> .....	105
B—7	Shape Optimization Study for a Three-Tunnel Superconductive Energy Storage Magnet, M. N. EL-DERINI, <i>University of Petroleum and Minerals</i> , and R. W. BOOM, <i>University of Wisconsin</i> .....	114
B—8	20-kA Power Supply for Large Superconductive Coils, M. MASUDA, T. SHINTOMI, and K. ASAJI, <i>National Laboratory for High Energy Physics</i> .....	120

#### **Superconductivity Applications—Rotating Machinery**

C—1	Superconducting Generator Design for Airborne Applications, B. B. GAMBLE and T. A. KEIM, <i>General Electric Company</i> .....	127
C—2	Superconducting Field Winding for a 10-MVA Generator, K. A. TEPPER, J. V. MINERVINI, and J. L. SMITH, Jr., <i>Massachusetts Institute of Technology</i> .....	137
C—3	Conductive Armature Shielding Design Concepts for Slow-Speed Superconducting Generators in the 40- to 400-MVA Range, S. KUZNETSOV, <i>Imperial College of Science and Technology</i> .....	145
C—4	Optimization of Superconducting Cryoturbogenerator Field-Winding Parameters, B. I. VERKIN, I. S. ZHITOMIRSKII, and R. V. GAVRILOV, <i>Academy of Sciences of the Ukrainian SSR</i> .....	156

#### **Superconductivity Applications—Magnet Technology**

D—1	Superconducting Compensating Solenoids for the CELLO Detector Experiment at PETRA, W. BARTH, N. FESSLER-WILHELMI, W. LEHMANN, and P. TUROWSKI, <i>Kernforschungszentrum Karlsruhe</i> .	163
D—2	Construction and Test of the CELLO Thin-Wall Solenoid, H. DESPORTES, J. LE BARS, and G. MAYAUX, <i>Centre d'Etudes Nucléaires de Saclay</i> .....	175
D—3	Quenches in the Superconducting Magnet CELLO, W. V. HASSENZAHN, <i>Los Alamos Scientific Laboratory</i> .....	185

D—4	Construction and Testing of the Two-Meter-Diameter TPC Thin Superconducting Solenoid, M. A. GREEN, P. H. EBERHARD, R. R. ROSS, and J. D. TAYLOR, <i>Lawrence Berkeley Laboratory</i> . . . . .	194
D—5	Superconducting Magnet System for the Spirit Cosmic Ray Space Telescope, M. A. GREEN and J. M. DEOLIVARES, <i>Lawrence Berkeley Laboratory</i> , and G. TARLE, P. B. PRICE, and E. K. SHIRK, <i>University of California, Berkeley</i> . . . . .	200
D—6	A Maintainable Superconducting Magnet System for Tokamak Fusion Reactors, S. Y. HSIEH, G. DANBY, J. R. POWELL, P. BEZLER, D. GARDNER, and C. LAVERICK, <i>Brookhaven National Laboratory</i> , and M. FINKELMAN, T. BROWN, J. BUNDY, T. BALDERES, I. ZATZ, R. VERZERA, and R. HERBERMAN, <i>Grumman Aerospace Corporation</i> . . . . .	207
D—7	Prototype Low-Current Superconducting Quadrupole Magnet for Fermilab's High-Intensity Laboratory, W. CRADDOCK, R. W. FAST, P. GARBINCIUS, and L. MAPALO, <i>Fermi National Accelerator Laboratory</i> . . . . .	222
D—8	Superconducting Magnets of the Biomedical Facility at SIN, J. ZELLWEGER, G. VÉCSEY, and I. HORVATH, <i>SIN Swiss Institute for Nuclear Research</i> . . . . .	232

### Superconductivity Applications—Cryogenic Techniques

E—1	A Novel Thermometer Sensor for the mK Region Using the Proximity Effect, H. NAGANO, Y. ODA, and G. FUJII, <i>Tokyo University</i> . . . . .	239
E—2	A Superconducting RF Notch Filter, C. S. PANG, C. M. FALCO, R. T. KAMPWIRTH, and I. K. SCHULLER, <i>Argonne National Laboratory</i> , and J. J. HUDAK and T. A. ANASTASIO, <i>Department of Defense</i> . . . . .	244
E—3	Experimental Evaluation of a 1-Meter-Scale D-Shaped Test Coil Fabricated from a 23-Meter Length of Internally Cooled, Cabled Superconductor, M. O. HOENIG, A. G. MONTGOMERY, and S. J. WALDMAN, <i>Francis Bitter National Magnet Laboratory</i> . . . . .	251
E—4	Performance of Gas-Filled Thermal Switches, J. YAMAMOTO, <i>Osaka University</i> . . . . .	261

### Cooling Superconducting Systems

F—1	Transient Cooling of a Faultworthy Superconducting Electric Generator, J. A. SCHWOERER and J. L. SMITH, Jr., <i>Massachusetts Institute of Technology</i> . . . . .	266
F—2	Experimental Simulation of a Cryogenic System for a Large Superconducting Rotor, L. SOBEL, J. L. SMITH, Jr., and F. RUMORE, <i>Massachusetts Institute of Technology</i> . . . . .	275
F—3	Rotor Cooling System for a 10-MVA Superconducting Generator, M. T. BROWN, M. E. CRAWFORD, and J. L. SMITH, JR., <i>Massachusetts Institute of Technology</i> . . . . .	285
F—4	Safety Leads, M. KUCHNIR and T. H. NICOL, <i>Fermi National Accelerator Laboratory</i> . . . . .	294

F—5	Magnet Leads for the First-Cell, D. P. BROWN and W. J. SCHNEIDER, <i>Brookhaven National Laboratory</i> .....	300
F—6	Thermal Control for the MFTF Magnet, J. H. VANSANT and R. M. RUSS, <i>Lawrence Livermore Laboratory</i> .....	308
F—7	Forced-Circulation Cooling System for the Argonne Superconducting Heavy-Ion Linac, J. M. NIXON and L. M. BOLLINGER, <i>Argonne National Laboratory</i> .....	317
F—8	Energy Doubler Satellite Refrigerator Magnet Cooling System, C. RODE, P. BRINDZA, and D. RICHIED, <i>Fermi National Accelerator Laboratory</i> , and S. STOY, <i>Cryogenic Consultants, Inc.</i> .....	326
F—9	Cryogenic Support System for Airborne Superconducting Generators, P. J. KERNEY and P. A. LESSARD, <i>CTI-Cryogenics</i> ..	335
F—10	Economics of Cryogenic Systems for Superconducting Magnets, G. Y. ROBINSON, JR., <i>Massachusetts Institute of Technology</i> .....	342
F—11	Minimization of Refrigeration Power for Large Cryogenic Systems, M. A. HILAL, <i>Michigan Technological University</i> , and Y. M. EYSSA, <i>University of Wisconsin—Madison</i> .....	350

### Heat Transfer in Helium

G—1	Two-Dimensional Heat Transfer to Superfluid Helium, M. A. HILAL, <i>Michigan Technological University</i> .....	358
G—2	Heat Transfer to Helium-II in Cylindrical Geometries, S. W. VAN SCIVER and R. L. LEE, <i>University of Wisconsin—Madison</i> ..	363
G—3	Maximum and Minimum Heat Flux and Temperature Fluctuation in Film-Boiling States in Superfluid Helium, H. KOBAYASHI and K. YASUKŌCHI, <i>Nihon University</i> .....	372
G—4	Transient Heat Transfer in Boiling Helium-I and Subcooled Helium-II, P. SEYFERT, G. CLAUDET, and M. J. MCCALL, <i>Centre d'Etudes Nucléaires de Grenoble</i> , and R. AYMAR, <i>Centre d'Etudes Nucléaires de Fontenay aux Roses</i> .....	378
G—5	Heat Transfer Measurement With a Small Superconducting Coil Subjected to Transient and Quasistatic Heating at Temperatures between 1.8 and 4.2 K, D. GENTILE, <i>Centre d'Etudes Nucléaires de Saclay</i> , and W. V. HASSENZAHN, <i>Los Alamos Scientific Laboratory</i> .....	385
G—6	Heat Transfer of Helium in a Pipe With Suction, L. L. VASILIEV, G. I. BOBROVA, and L. A. STASEVICH, <i>The Luikov Heat and Mass Transfer Institute</i> .....	393
G—7	Heat Transfer and Helium Replenishment in Cabled Conductor Cooling Channels, P. F. MICHAELSON, R. QUAY, and R. F. KOENIG, <i>General Electric Company</i> , and P. L. WALSTROM and J. S. GODDARD, <i>Oak Ridge National Laboratory</i> .....	398
G—8	Measurements of Heat Transfer and Helium Replenishment in Long Narrow Channels, R. E. SCHWALL, F. J. RELES, and J. P. HEINRICH, <i>Intermagnetics General Corporation</i> .....	406
G—9	Vapor Locking and Heat Transfer under Transient and Steady-State Conditions, C.-J. CHEN, S.-T. WANG, and J. W. DAWSON, <i>Argonne National Laboratory</i> .....	412
G—10	Forced Two-Phase Helium Cooling of Large Superconducting Magnets, M. A. GREEN, W. A. BURNS, and J. D. TAYLOR, <i>Lawrence Berkeley Laboratory</i> .....	420

### Heat Transfer

H—1	Contact Heat Transfer in Solid Cryogenics, B. I. VERKIN, R. S. MIKHALCHENKO, V. F. GETMANETS, and L. G. GONCHARENKO, <i>Academy of Sciences of the Ukrainian SSR</i> .....	431
H—2	Digital Computer Simulation of Voidage in a Regenerator, J. B. HARNESS and P. E. L. NEUMANN, <i>University of Bradford</i> .....	438
H—3	Simulation of Cooldown Underneath Large Cryogenic Storage Tanks, M. H. SEELAND and K. D. TIMMERHAUS, <i>University of Colorado</i> .....	446
H—4	Transient Pool Boiling of Liquid Helium Using a Temperature-Controlled Heater Surface, P. J. GIARRATANO and N. V. FREDERICK, <i>NBS Thermophysical Properties Division</i> .....	455
H—5	Heat Transfer during Subcooled Hydrogen Boiling, B. I. VERKIN, YU. A. KIRICHENKO, and N. M. LEVCHENKO, <i>Academy of Sciences of the Ukrainian SSR</i> .....	467
H—6	Observation of Bubble Formation Mechanism of Liquid Nitrogen Subjected to Transient Heating, O. TSUKAMOTO and T. UYEMURA, <i>Yokohama National University</i> , and T. UYEMURA, <i>Tokyo University</i> .....	476
H—7	Natural Convection Heat Leak in Supercritical Hydrogen Tanks, A. J. BARRETT, <i>Beech Aircraft Corporation</i> .....	483
H—8	Techniques for Reducing Radiation Heat Transfer between 77 and 4.2 K, E. M. W. LEUNG, R. W. FAST, H. L. HART, and J. R. HEIM, <i>Fermi National Accelerator Laboratory</i> .....	489

### Flow Phenomena

J—1	Experience with an Orifice Flow Meter Installed in a Helium Refrigerator, J. W. DEAN and W. F. STEWART, <i>Los Alamos Scientific Laboratory</i> .....	500
J—2	Some Observations of a Free Jet Phenomenon in a 90° Sharp-Edge Inlet Geometry, R. C. HENDRICKS, <i>NASA, Lewis Research Center</i> .....	506
J—3	Experimental Study of Flow Instabilities in Forced Helium Cooling Channels, Y. MATSUBARA, A. SUGAWARA, and K. YASUKŌCHI, <i>Nihon University</i> .....	521
J—4	Acoustic Oscillation Phenomena in Low-Velocity Steady Flow with Heating, J. A. LIBURDY, <i>Clemson University</i> , and J. L. WOFFORD, <i>Arkansas Power and Light Co.</i> .....	528
J—5	Control of Pressurized Superfluid Helium-II: Application to Loss Analysis, M. X. FRANÇOIS, <i>Laboratoire d'Aérodynamique</i> , and J. C. LOTTIN and J. PLANCOULAIN, <i>Centre d'Etudes Nucléaires de Saclay</i> .....	541

### Liquefaction and Refrigeration

K—1	Thermodynamic Optimization of Helium Liquefaction Cycles, R. H. HUBBELL, <i>Arthur D. Little, Inc.</i> , and W. M. TOSCANO, <i>Foster-Miller Associates</i> .....	551
K—2	A 50-Liters/hr Helium Liquefier for a Superconducting Magnetic Energy Storage System, P. J. KERNEY and D. A. MCWILLIAMS, <i>CTI-Cryogenics</i> .....	563

K—3	A Closed-Cycle Thermally Activated Regenerative Cryogenerator, J. B. HARNESS and P. E. L. NEUMANN, <i>University of Bradford</i> .....	574
K—4	A Study of Refrigeration for Liquid-Nitrogen-Cooled Power Transmission Cables, R. C. LONGSWORTH, <i>Air Products and Chemicals, Inc.</i> , and K. F. SCHOCH, <i>General Electric Company</i> ...	585
K—5	The Effect of Temperature on Impurity Adsorption from Hydrogen on Activated Carbon and Silica Gel, W. C. KRATZ, <i>Air Products and Chemicals, Inc.</i> .....	597

### Solid and Fluid Properties

L—1	Effect of Nitrogen Presence on Solid Solubility of Normal Paraffins in Liquid Ethane, J. D. HOTTOVY, W. L. CHEN, J. P. KOHN, and K. D. LUKS, <i>University of Notre Dame</i> .....	609
L—2	Solubility of Solid tert-Butyl Mercaptan in Liquid Methane and an LNG Mixture, G. P. KUEBLER and C. MCKINLEY, <i>Air Products and Chemicals, Inc.</i> .....	616
L—3	Prediction of CO <sub>2</sub> Solubility in Light Hydrocarbon Mixtures at Low Temperatures, R. J. J. CHEN, V. W. LIAW, and D. G. ELLIOT, <i>DM International, Inc.</i> .....	620
L—4	Melting Point Data for Freeze Protection in Natural Gas Liquids (NGL) Plants Using Methanol Dehydration, R. L. HORTON and G. C. DYSINGER, <i>Phillips Petroleum Company</i> .....	629
L—5	Measurement of Isochoric P–V–T Behavior of a Nominal 95-mol.-%-Methane–5-mol.-%-Propane Mixture from Near-Ambient to Cryogenic Temperatures, K. ARAI and R. KOBAYASHI, <i>Rice University</i> .....	640
L—6	Phase Behavior of Three Hydrogen-Containing Ternary Systems, M. YORIZANE, S. YOSHIMURA, and H. MASUOKA, <i>University of Hiroshima</i> , I. FUNADA, <i>Kobe Steel Ltd.</i> , and C.-T. FU and B. C.-Y. LU, <i>University of Ottawa</i> .....	654
L—7	Vapor Pressure and Heats of Vaporization and Sublimation of Liquids and Solids of Interest in Cryogenics Below 1-atm Pressure, G. N. BROWN, JR. and W. T. ZIEGLER, <i>Georgia Institute of Technology</i> .....	662
L—8	Simple and Generalized Equation of State for Vapor–Liquid Equilibrium Calculations, T. ISHIKAWA, W. K. CHUNG, and B. C.-Y. LU, <i>University of Ottawa</i> .....	671
L—9	Reduced Volumetric Expansion and Isothermal Compressibility Factor Plots, R. C. HENDRICKS, <i>NASA, Lewis Research Center</i> ...	682
L—10	The Construction and Use of Exergy Diagrams, W. O. DALY and J. B. HARNESS, <i>University of Bradford</i> .....	693
L—11	Densities and Dielectric Constants of LPG Components and Mixtures at Cryogenic Storage Conditions, R. T. THOMPSON, JR. and R. C. MILLER, <i>University of Wyoming</i> .....	698
L—12	Dielectric Properties of Liquid Hydrogen, V. V. PASHKOV and M. P. LOBKO, <i>Ukrainian Academy of Sciences</i> .....	709

### Cryogenic Applications—LNG

M—1	World Market for LNG Trade—Present and Future, B. M. GIBSON, <i>Air Products and Chemicals, Inc.</i> . . . . .	715
M—2	LNG Project Development: Shipping and Terminal Considerations, V. V. STAFFA and D. K. JHAVERI, <i>Tennessee Gas Transmission Company</i> . . . . .	730
M—3	Marine Transportation of LNG at Intermediate Temperature, C. P. BENNETT, <i>University of Manitoba</i> . . . . .	751
M—4	Explosion Hazards of LNG and LPG Carriers during Transport, M. M. KAMEL and A. KHALIL, <i>Cairo University</i> . . . . .	757
M—5	Purification and Cryogenic Separation of SNG Produced from Coal, A. A. CASSANO, T. C. LI, J. C. TAO, and T. R. TSAO, <i>Air Products and Chemicals, Inc.</i> . . . . .	763

### Cryogenic Applications—Space Technology

N—1	A Portable <sup>3</sup> He Cryostat for Studies in Astrophysics, A. SHERMAN and O. FIGUEROA, <i>Goddard Space Flight Center</i> . . . . .	775
N—2	Mechanism of an Active Phase Separator for Space Applications, H. D. DENNER, G. KLIPPING, I. KLIPPING, K. LÜDERS, J. MENZEL, and U. RUPPERT, <i>Freie Universität Berlin</i> . . . . .	783
N—3	Progress on the Development of a 3- to 5-Year Lifetime Stirling Cycle Refrigerator for Space, A. SHERMAN and M. GASSER, <i>Goddard Space Flight Center</i> , M. GOLDOWSKY, <i>North American Phillips Corporation</i> , G. BENSON, <i>Energy Research and Generation, Inc.</i> , and J. MCCORMICK, <i>Mechanical Technology, Inc.</i> . . . . .	791
N—4	Superfluid Helium Experiment for Spacelab 2, P. MASON, D. COLLINS, P. COWGILL, D. ELLEMAN, D. PETRAC, M. SAFFREN, and T. WANG, <i>Jet Propulsion Laboratory</i> . . . . .	801

### Cryogenic Applications—Resource Utilization

O—1	Helium: Its Past, Present, and Future, E. F. HAMMEL, <i>Los Alamos Scientific Laboratory</i> . . . . .	810
O—2	Liquid Hydrogen as an Automotive Fuel, W. F. STEWART, <i>Los Alamos Scientific Laboratory</i> . . . . .	822
O—3	Liquid Nitrogen as an Energy Source for an Automotive Vehicle, M. V. SUSSMAN, <i>Tufts University</i> . . . . .	831
