

CONTENTS

Foreword	xi
International Cryogenic Materials Conference Board	xii

General Reviews

A—1	Large Superconducting Magnets for New Energy Technologies, M. N. WILSON, <i>Massachusetts Institute of Technology</i>	1
A—2	Low-Temperature Properties of Epoxy Resins and Composites, G. HARTWIG, <i>Institut für Technische Physik</i>	17
A—3	The Development of Cryogenic Materials Science in the USSR, B. I. VERKIN, <i>Physico-Technical Institute of Low Temperatures</i>	37
A—4	A Low-Temperature Materials Research Program for Magnetic Fusion Energy, F. R. FICKETT, M. B. KASEN, H. I. MCHENRY, and R. P. REED, <i>National Bureau of Standards at Boulder</i>	52
A—5	Composite Materials for Cryogenic Structures, M. B. KASEN, <i>National Bureau of Standards at Boulder</i>	63
A—6	Summary of the International Discussion Meeting on Radiation Effects on Superconductivity, B. S. BROWN, <i>Argonne National Laboratory</i>	76
A—7	Fatigue Crack Growth Resistance of Structural Alloys at Cryogenic Temperatures, R. L. TOBLER and R. P. REED, <i>National Bureau of Standards at Boulder</i>	82
A—8	Fe-Mn Alloys for Cryogenic Use: A Brief Survey of Current Research, J. W. MORRIS, JR., and S. K. HWANG, <i>University of California at Berkeley</i> and K. A. YUSHCHENKO, V. I. BELOTZERKOVETZ, and O. G. KVASNEVSKII, <i>E. O. Paton Institute of Electrowelding</i>	91
A—9	Elastic Constants at Low Temperatures: Recent Measurements on Technological Materials at NBS, H. M. LEDBETTER, <i>National Bureau of Standards at Boulder</i>	103

Ferrous Alloys

B—1	Low-Temperature Weldable Steels and Alloys, K. A. YUSHCHENKO, <i>E. O. Paton Institute of Electrowelding</i>	120
B—2	Cryogenic Properties of a New Tough-Strong Iron Alloy, J. R. STEPHENS and W. R. WITZKE, <i>NASA—Lewis Research Center</i> ...	129
B—3	The Suppression of Low-Temperature Intergranular Brittleness in Ferritic Fe-Mn Alloys, S. K. HWANG, and J. W. MORRIS, JR., <i>University of California at Berkeley</i>	137
B—4	Surface Film Effects on Deformation Behavior of Iron Single Crystals at Cryogenic Temperatures, S. KOBAYASHI and M. MESHII, <i>Northwestern University</i>	144

- B—5 Evaluation of Weldments in Austenitic Stainless Steels for Cryogenic Applications, J. M. WELLS, W. A. LOGSDON, and R. KOSSOWSKY, *Westinghouse Research Laboratories* 150
- B—6 Note on the Fracture Properties of Fe-49Ni at Cryogenic Temperatures, H. I. MCHENRY and R. E. SCHRAMM, *National Bureau of Standards at Boulder* 161

Nonferrous Alloys

- C—1 Fracture Strength of Thick 5083-0 Aluminum Alloy for LNG Storage Tanks, K. IKEDA, Y. MIYAGI, M. AOKI, and T. SHIRAKURA, *Kobe Steel, Ltd.* 166
- C—2 Metallurgical Problems of Welding 1201 (Al-6Cu-Mn) Alloy, A. YA. ISHCHENKO, A. V. LOZOVSKAYA, and M. I. SAYENKO, *E. O. Paton Institute of Electrowelding* 175
- C—3 Environmental-Assisted Fatigue Crack Propagation in 3003-0 Aluminum, R. ROBERTS and K. WNEK, *Lehigh University*, and J. C. TAFURI, *Air Products and Chemicals Inc.* 187
- C—4 The Influence of Processing and Heat Treatment on the Cryogenic Fracture Mechanics Properties of Inconel 718, W. A. LOGSDON, R. KOSSOWSKY, and J. M. WELLS, *Westinghouse Research Laboratories* 197
- C—5 Experimental Analysis of Cracks in Thin Metal Plates, N. V. NOVIKOV and A. L. MAYSTRENKO, *Institute for Problems of Strength* 210

Structural Alloys—Physical Properties

- D—1 Specific Heats of Some Cryogenic Structural Materials I—Fe-Ni-Base Alloys, E. W. COLLINGS and R. D. SMITH, *Battelle, Columbus Laboratories* 214
- D—2 Magnetic Field Effect on Thermal Conductivity of Selected Metals, L. L. SPARKS, *National Bureau of Standards at Boulder* .. 224
- D—3 Standard Reference Materials for Thermophysical Properties, J. G. HUST, *National Bureau of Standards at Boulder*, and R. K. KIRBY, *National Bureau of Standards at Washington, D.C.* 232
- D—4 Diffuse Cluster Superparamagnetism in Inconel X750, R. L. CAPPELLETTI, *Ohio University*, and E. W. COLLINGS, *Battelle, Columbus Laboratories* 240
- D—5 Temperature Dependence of Creep in F.C.C. and H.C.P. Metals at Low Temperature, V. A. KOVAL, A. I. OSETSKI, V. P. SOLDATOV, and V. I. STARTSEV, *Physico-Technical Institute of Low Temperatures* 249

Composites

- E—1 Stainless Steel Fiber Organic Matrix Composites for Cryogenic Application, R. L. KOLEK and R. D. BLAUGHER, *Westinghouse Research Laboratories*, and J. L. MCCABRIA, *Westinghouse Aerospace Electrical Division* 256

E—2	Glass-Reinforced Epoxy Piping for Liquid-Nitrogen-Cooled, AC Transmission Cables, K. F. SCHOCH and D. D. BERGH, <i>General Electric Research and Development Center</i>	262
E—3	Fiberglass-Epoxy in a Conical Superconducting Field Magnet Support, R. E. SCHRAMM and M. B. KASEN, <i>National Bureau of Standards at Boulder</i>	271
E—4	Compressive Strength of Glass-Fiber-Reinforced Composites at Room Temperature and 77 K, E. L. STONE and W. C. YOUNG, <i>University of Wisconsin at Madison</i>	279
E—5	An Epoxy Fiberglass Tension Member Support for Superconducting Magnets, R. C. NIEMANN, J. D. GONCZY, and K. F. MATAYA, <i>Argonne National Laboratory</i> , and P. SMELSER, <i>Private Consultant</i>	283
E—6	Specific Heats of Some Cryogenic Structural Materials II—Composites, E. W. COLLINGS and R. D. SMITH, <i>Battelle, Columbus Laboratories</i>	290
E—7	Distribution of the Effective Thermal Conductivity in a Porous Insulation System Subjected to Internal Vapor Circulation, J. NAVICKAS, <i>McDonnell Douglas Astronautics Company</i>	297

Superconductors—Stress Effects

F—1	Fatigue and Stress Effects in NbTi and Nb ₃ Sn Multifilamentary Superconductors, J. W. EKIN, <i>National Bureau of Standards at Boulder</i>	306
F—2	Evaluation of Large, Multifilament Nb ₃ Sn Conductors with a New 12-Tesla Tensile Test Apparatus, D. W. DEIS, D. G. HIRZEL, A. R. ROSDAHL, D. R. ROACH, H. S. FREYNIK, JR., and J. P. ZBASNIK, <i>Lawrence Livermore Laboratory</i>	317
F—3	Influence of Tensile Stresses on the Superconducting Temperature of Multifilamentary Nb ₃ Sn Composite Conductors, T. LUHMAN, M. SUENAGA, and C. J. KLAMUT, <i>Brookhaven National Laboratory</i>	325
F—4	Mechanical Properties of Multifilamentary Nb ₃ Sn Superconductors, E. ADAM, E. GREGORY, and F. T. ORMAND, <i>Airco Central Research Laboratories</i>	331
F—5	Resistance to Strain Degradation in Preliminary UWMAK TF Coil Conductors for Fusion Reactors, S. O. HONG, P. F. MICHAELSON, I. N. SVIATOSLAVSKY, and W. C. YOUNG, <i>University of Wisconsin at Madison</i>	341

Superconductors—Pinning

G—1	How Effectively Can Grain Boundaries Pin Flux Lines? A. DASGUPTA, C. C. KOCH, and D. M. KROEGER, <i>Oak Ridge National Laboratory</i> , and Y. T. CHOU, <i>Lehigh University</i>	350
G—2	Critical Currents in Thin Nb ₃ Ge and Nb ₃ Ga Films, H. F. BRAUN and M. A. WINKELMANN, <i>Universität Giessen and Technische Universität Braunschweig</i>	358

Superconductors—Multifilamentary

H—1	Critical Current Density in Multifilamentary Composites, A. FÉVRIER and J. C. RENARD, <i>Centre de Recherches de la Compagnie Générale d'Electricité</i>	363
H—2	High-Current Al-TiNb Composite Conductor for Large Energy Storage Magnets, S. G. LADKANY, <i>University of Wisconsin at Madison</i>	374
H—3	Fabrication and Properties of an Aluminum-Stabilized NbTi Multifilament Superconductor, M. YOUNG, E. GREGORY, E. ADAM, and W. MARANCIK, <i>Airco Central Research Laboratories</i> ..	383
H—4	Performance of Multifilament Nb ₃ Sn Conductors for High-Field Applications Prepared by Competing Processes, M. S. WALKER, J. M. CUTRO, R. E. WILCOX, B. A. ZEITLIN, A. PETROVICH, and G. M. OZERYANSKY, <i>Intermagnetics General Corporation</i>	389
H—5	Multifilamentary Nb ₃ Sn Composites Incorporating a High-Tin Bronze, A. PETROVICH and B. A. ZEITLIN, <i>Intermagnetics General Corporation</i>	398
H—6	Combined Transport Current and Transverse Field Losses in Multifilament Superconductors, J. H. MURPHY and M. S. WALKER, <i>Westinghouse Research Laboratories</i>	406
H—7	Alternating Field Losses in Filamentary Superconductors Carrying DC Transport Currents, W. J. CARR, JR., J. H. MURPHY, and G. R. WAGNER, <i>Westinghouse Research Laboratories</i>	415
H—8	Superconductors for Tokamak Poloidal Field Coils, R. E. SCHWALL, S. S. SHEN, J. W. LUE, J. R. MILLER, and H. T. YEH, <i>Oak Ridge National Laboratory</i>	427

Superconductors—Films and Tapes

I—1	Preparation and Superconducting Properties of Thin NbN Films in Magnetic Fields, E. M. DUCHARDT-HELLBARTH and E. J. SAUR, <i>Universität Giessen</i>	436
I—2	Properties of Superconducting Nb ₃ Sn Layers Used in RF Cavities, P. KNEISEL, H. KÜPFER, O. STOLTZ, and J. HALBRITTER, <i>Kernforschungszentrum und Universität</i>	445
I—3	Nb ₃ Sn Conductors for AC Power Transmission: Electrical and Mechanical Characteristics, J. F. BUSSIÈRE, V. KOVACHEV, C. KLAMUT, and M. SUENAGA, <i>Brookhaven National Laboratory</i>	449
I—4	Nb ₃ Ge as a Potential Candidate Material for 15- to 25-T Magnets, M. R. DANIEL, A. I. BRAGINSKI, G. W. ROLAND, J. R. GAVALER, and A. T. SANTHANAM, <i>Westinghouse R and D Center</i>	459
I—5	Nb ₃ Ge and Nb ₃ Sn Films Prepared by High-Rate Magnetron Sputtering, R. T. KAMPWIRTH, C. T. WU, and J. W. HAFSTROM, <i>Argonne National Laboratory</i>	465

Special Electrical Materials

J—1 Evaluation of Metal-Foil Strain Gauges for Cryogenic Application in Magnetic Fields, H. S. FREYNIK, JR., D. R. ROACH, D. W. DEIS, and D. G. HIRZEL, *Lawrence Livermore Laboratory* 473

J—2 Dielectric Loss Spectrum of Hydrated Vitreous Silica, J. LE G. GILCHRIST, *Centre de Recherches sur les Très Basses Températures*, and W. MEYER, *Technische Universität Braunschweig* 480

J—3 Measurements of Mechanical and Electrical Properties of High-Purity Aluminum, S. H. KIM and S. T. WANG, *Argonne National Laboratory* 485

U.S./USSR Exchange Program on LNG Materials Research

K—1 Mechanical Properties of Soviet and American Al-Mg Alloy Plates and Welds for LNG Systems, A. YA. ISHCENKO, *E. O. Paton Institute of Electrowelding*, and N. V. NOVIKOV, *Institute for Problems of Strength* 491

K—2 Mechanical Properties of U.S./USSR Al-Mg Plate and Welds for LNG Applications, R. A. KELSEY and F. G. NELSON, *Alcoa Laboratories* 505

K—3 Low-Temperature Fracture Properties of a USSR Aluminum-6% Magnesium Alloy, H. I. MCHENRY, S. E. NARANJO, D. T. READ, and R. P. REED, *National Bureau of Standards at Boulder* 519

K—4 An Evaluation of Three Steels for Cryogenic Service, J. P. BRUNER and D. A. SARNO, *Armco Steel Corporation* 529

K—5 Investigation of Steels for Their Application in LNG Transportation and Storage Welded Systems, K. A. YUSHCHENKO, V. I. BELOTZERKOVETZ, T. M. STARUSHCHENKO, L. V. KOVALENKO, and G. YA. SITNICHENKO, *E. O. Paton Institute of Electrowelding* 540

K—6 Fracture Toughness of Cryogenic Alloys, A. W. PENSE, R. D. STOUT, and B. R. SOMERS, *Lehigh University* 548

K—7 Fracture Mechanics Parameters for an Iron-13% Chromium-19% Manganese Stainless Steel and Its Welds at Cryogenic Temperatures, R. L. TOBLER, H. I. MCHENRY, and R. P. REED, *National Bureau of Standards at Boulder* 560
