<b>Foreword by R. Stephen Berry .....</b>	<b>ix</b>
<b>Preface .....</b>	<b>xi</b>
<b>Introduction: Evolution as Accumulation of Useful Information .....</b>	<b>xiii</b>
<b>Chapter 1: Concepts, Definitions, and Analogies .....</b>	<b>1</b>
1.1. Irreversibility and Equilibrium in Mechanics and Thermodynamics .....	1
1.2. Entropy and the Second Law of Thermodynamics .....	4
1.3. Irreversibility in Economics .....	6
1.4. Thermodynamic Constraints in Economics.....	8
1.5. Equilibrium, Steady State, and Chaos .....	9
1.6. Order, Structure, and Organization .....	11
1.7. Diversity and Complexity .....	13
1.8. Biological Change: Development versus Evolution .....	15
1.9. Ecosystem, Biosphere, and Gaia.....	17
1.10. Myopia vs. Presbyopia; Selfishness vs. Altruism .....	20
References .....	23
<b>Chapter 2: Information and Thermodynamics .....</b>	<b>27</b>
2.1. Theoretical Framework: What Is Information? .....	27
2.2. Joint and Conditional Probabilities .....	31
2.3. Information and Entropy .....	35
2.4. Thermodynamic Information .....	37
2.5. Survival-Relevant Information .....	42
2.6. Summary .....	44
References .....	48

<b>Chapter 3: Physical Evolution: From the Universe to the Earth.</b>	<b>51</b>
3.1. The Evolution of Matter .....	51
3.2. From the First Picosecond to the Next Three Minutes .....	54
3.3. From 3 Minutes to 1 Million Years .....	56
3.4. Since the First Million Years .....	58
3.5. Physical Evolution: Diversity, Complexity and Stability .....	64
3.6. Physical Evolution and Information .....	66
References .....	71
<b>Chapter 4: Geological and Biochemical Evolution</b>	<b>73</b>
4.1. Geological Evolution of the Earth .....	73
4.2. Chemical Precursors to Organic Synthesis .....	81
4.3. Digression: Other Unsolved Mysteries .....	87
4.4. Self-Organization at the Chemical Level .....	89
4.5. Self-Replication .....	90
4.6. Genetic Reproduction as an Information Process .....	93
References .....	98
<b>Chapter 5: Biological Evolution</b>	<b>101</b>
5.1. Primitive Organisms .....	101
5.2. The Invention of Sexual Reproduction .....	104
5.3. Evolutionary Mechanisms and Discontinuities .....	106
5.4. Information and the Evolutionary Mechanism .....	109
5.5. The Direction of Phylogenetic Evolution .....	115
5.6. A Digression on the Evolution of Consciousness .....	117
5.7. Summary .....	119
References .....	122
<b>Chapter 6: Evolution in Human Social Systems</b>	<b>124</b>
6.1. The Evolution of Cooperative Behavior .....	124
6.2. Games and Rational Choice in Social Systems .....	126
6.3. Static Equilibrium in Economics: The Free Market .....	131
6.4. Quasi-Static (Homothetic) Growth in Economics .....	135
6.5. Ontological Theories of Development .....	138
References .....	147
<b>Chapter 7: Evolution in Economic Systems</b>	<b>151</b>
7.1. Evolution and Growth .....	151

---

7.2. The Problem of Economic Growth Revisited.....	152
7.3. Schumpeter's Contribution: Radical Innovation.....	155
7.4. Post-Schumpeterian Evolutionary Theories.....	156
7.5. "Technological Breakthroughs" and Non-linear Dynamics .....	159
7.6. Progress Functions (with K. Martinás) .....	163
7.6a. Micro-Foundations.....	165
7.6b. A Progress-Function for Firms.....	169
7.6c. Interpretation .....	173
7.6d. Concluding Remarks .....	174
References .....	180
<b>Chapter 8: The Economy as a Self-Organizing Information-Processing System .....</b>	<b>186</b>
8.1. The Analogy with Living Systems .....	186
8.2. The Economy as an Information-Transformation System.....	190
8.3. Information Transformation and Value Added .....	193
8.4. The Role of Labor .....	196
8.5. The Role of Capital .....	197
8.6. The Role of Money .....	200
8.7. The Role of Technology .....	203
8.8. The Role of Structure and Organization.....	207
References .....	213
<b>Chapter 9: Information Added by Materials Processing .....</b>	<b>215</b>
9.1. Introduction .....	215
9.2. Energy Conversion.....	216
9.3. Cost of Refining .....	220
9.4. Thermodynamic Analysis of Alternative Processes .....	222
References .....	224
<b>Chapter 10: Morphological Information .....</b>	<b>225</b>
10.1. Surface Information: General Considerations.....	225
10.2. Morphological Information Embodied in Manufactured Shapes .....	227
10.3. Information of Orientation and Assembly.....	235
10.4. The Relative Prices of Metabolic and Morphological Information.....	238
10.5. The Principle of Minimum Morphological Information .....	244
References .....	247

<b>Chapter 11: Labor as an Information Process . . . . .</b>	<b>249</b>
11.1. Economic Background: The Worker as Information Processor . . . . .	249
11.2. Examples: Theory and Experiment . . . . .	252
11.3. Output of a Worker: Time and Motion . . . . .	254
11.4. Output of a Worker: Time and Information . . . . .	256
11.5. Output of a Worker: Motion and Information . . . . .	259
11.6. The Error/Defect Problem . . . . .	261
11.7. Errors and Information Overload . . . . .	263
11.8. Optimum Work Pace . . . . .	265
11.9. Value of Information Added by Labor . . . . .	268
References . . . . .	270
<b>Chapter 12: Evolution, Economics, and Environmental Imperatives . . . . .</b>	<b>273</b>
12.1. Recapitulation: Ideas of Equilibrium in Economics . . . . .	273
12.2. Brownian Motion or Gravitational Attraction? . . . . .	276
12.3. The Economic System and the Physical Environment . . . . .	278
12.4. Technological and Economic Evolution in Long-Term Perspective . . . . .	282
12.5. Concluding Thoughts and Speculations . . . . .	286
References . . . . .	290
<b>Afterword by Allen V. Kneese . . . . .</b>	<b>293</b>
<b>Index . . . . .</b>	<b>296</b>
