TABLE OF CONTENTS

Preface xi

Acknowledgments xv

1 Living with Complexity

Introduction 1
Characteristics of Complexity 2
Laplace's Demon 7
Nonlinearity 8
A Sneak Preview of Chaos Theory 13
Degrees of Freedom and Numbers 17
Dynamical Systems 19
Scope 20
Quo Vadis? Reduction and Holism 22
Notes and References 23

2 Meta-Quanitification of Complexity

Introduction 27
Facing the New Realities 28

Hierarchical Approach 30
Geometric Approach 33
Algorithmic Complexity 35
Notes and References 38

3 The Anatomy of Systems and Structures

Introduction 41
Open, Closed, and Isolated Systems 41
Phase Space 44
Equilibrium and Nonequilibrium 47
Stability and Instability 48
Parameters to Evaluate Equilibrium 50
Rayleigh–Bénard Instability 52
Irreversibility 54
Notes and References 57

4 Attractors

Introduction 59
Fixed-Point Attractors 61
Limit Cycles 64
Torus Attractors 69
Strange Attractors 69
Bernoulli Shift 74
Lyapunov Exponential Coefficient 76
Belousov–Zhabotinsky Reaction 77
Notes and References 79

5 Rapid Growth

Introduction 81
Malthus's Theory and the Exponential Equation 82
Fibonacci Series 86
Notes and References 89

6 The Logistic Curve

Introduction 91
Verhulst's Equation 94
Clues for Technological R&D Planning 95

Lotka–Volterra Equations 98
Notes and References 106

7 The Discrete Logistic Equation

Introduction 107
The Discrete Logistic Curve 109
The Morphology of the Discrete Logistic Equation 111
Return Maps 112
Bifurcation Diagram 117
Feigenbaum Universal Numbers 121
Multivariable Equations 124
Notes and References 124

8 The Different Personalities of Entropy

Introduction 127
Is Entropy for Real? 129
Why Muddy the Waters with Entropy? 130
Macroscopic Entropy 133
Statistical Entropy 141
Dynamic Entropies 151
Notes and References 157

9 Dimensions and Scaling

Introduction 161
Dimensions 164
Hausdorff–Besicovitch Dimension 165
Embedding Dimension 167
Scaling 169
Notes and References 173

10 Gallery of Monsters

Introduction 175
Background 176
Julia and Mandelbrot Sets 182
Barnsley's Chaos Game 188
Notes and References 191

11 The Diagnostics and Control of Chaos

Introduction 193
Time Series 195
Time Series Analysis 199
Log-Normal Distribution and $1/f$ Noise 204
Ising Model 207
Chaos Diagnostics 208
Chaos Control 215
Start Your Own Chaos Laboratory 217
Notes and References 220

12 Discussion Topics 223

Index of Names 235

Subject Index 241
