

## Contents

Translator's Foreword	x
Preface	xi
<b>CHAPTER 1</b>	
<b>Convergence, J. Gerretsen and H. Rau</b>	<b>1</b>
1. Introduction	1
2. Sequences	2
3. Monotone Sequences and Limits of Indeterminacy	7
4. Metric Spaces	11
5. Filters	12
6. Uniform Spaces	16
<b>CHAPTER 2</b>	
<b>Functions, H. Freudenthal and H. Wäsche</b>	<b>22</b>
1. Continuity	23
2. Differentiability	28
3. Higher Derivatives	35
4. Exponential Functions	38
5. Functions in $n$ -Dimensional Space	42
<b>CHAPTER 3</b>	
<b>Integral and Measure, E. Schieferdecker and K. Strehlke</b>	<b>53</b>
1. Elementary Theory of Integration	53
2. Abstract Measure and Its Extension	66
3. Distributions	78
<b>CHAPTER 3a</b>	
<b>Fundamental Concepts of the Theory of Probability, L. Schmetterer and R. Stender</b>	<b>89</b>

1. The Concept of Probability	89
2. The Distribution Function of a Random Variable	93
3. Independence	98
4. Expectation	99
5. Characteristic Functions	103
6. Sums of Independent Random Variables	107
7. Conditional Probability and Conditional Expectation	108
8. Some Limit Theorems	114
<b>CHAPTER 4</b>	
<b>Alternating Differential Forms, F. Sommer, B. Reimann, and H. Rau</b>	124
<b>A. The Laws for Multiple Integrals</b>	125
1. Integrals over Curves in the Plane and in Space	125
2. Integrals over Surfaces in Space	130
3. Integrals over Manifolds $M^r$ in the Space $R^n$	138
4. Transformations of the Parameters	140
5. Transformation of Coordinates. The Concept of an Alternating Differential Form	143
<b>B. The Calculus of Alternating Differentials</b>	154
6. The Grassmann Algebra of Alternating Differential Forms	154
7. The Differential Operations for the Alternating Differential Forms	159
8. Transformation of Coordinates	165
9. The Stokes Theorem	171
<b>C. Applications of the Calculus of Alternating Differential Forms</b>	176
10. Differential Forms in the Euclidean Plane	176
11. Differential Forms in Euclidean Three-Dimensional Space. Vector Analysis	177
12. Differential Forms on Differentiable and Riemannian Manifolds	184
<b>CHAPTER 5</b>	
<b>Complex Numbers. The Foundations of Analysis in the Complex Plane, E. Peschl and A. Schulte</b>	188
1. The Complex Numbers	188
2. The Relation of Complex Numbers to Elementary Geometry	191
3. Fundamental Theorem of Algebra	195

4. Sets and Sequences of Complex Numbers, Basic Topological Concepts	196
5. Functions, Real and Complex Differentiability, and Differentials	200
6. Holomorphic and Harmonic Functions	207
 <b>CHAPTER 6</b>	
<b>Functions of a Complex Variable, H. Tietz and K. Wigand</b>	214
1. Holomorphic Functions in the Complex Plane	215
2. Meromorphic Functions in the Complex Plane	226
3. The Theory of Functions on the Closed Plane	229
4. Riemann Surfaces	238
5. Functions on a Riemann Surface	246
 <b>CHAPTER 7</b>	
<b>Points at Infinity, H. Behnke and H. Grauert</b>	252
1. The Usefulness of Points at Infinity	253
2. Existence and Properties of the Projective Plane	259
3. The Function-Theoretic Closure of the Euclidean Plane	262
4. Neighborhoods and Compactification	264
5. Other Methods of Closing the Plane	266
6. Modifications	271
 <b>CHAPTER 8</b>	
<b>Ordinary Differential Equations, H. Tietz and K. Wigand</b>	276
1. Introduction	276
2. Methods of Integration	277
3. Properties of the Solutions of Explicit Differential Equations	290
4. Solutions with Special Properties	294
 <b>CHAPTER 9</b>	
<b>Partial Differential Equations, G. Hellwig and H. Liermann</b>	306
1. Basic Concepts and the Simplest Examples	306
2. Classification of Partial Differential Equations into Types; Normal Forms	321
3. Uniqueness Questions	326
4. Questions of Existence	336

<b>CHAPTER 10</b>	
<b>Difference Equations and Definite Integrals, H. Meschkowski and K. Reinhard</b>	351
1. Introduction	351
2. Simple Difference Equations	355
3. The $\Gamma$ -Function	365
4. Methods of Solution for Linear Difference Equations	379
<b>CHAPTER 11</b>	
<b>Functional Analysis, W. Schmeidler and W. Dreetz</b>	391
<b>A. Introduction</b>	391
<b>B. Linear Theory</b>	393
1. Linear Functionals and Operators	393
2. Hilbert Space and Banach Space	394
3. Linear Operators in $\mathfrak{S}$	400
4. Symmetric and Completely Continuous Linear Operators	408
5. Spectral Theory of Self-adjoint Operators	413
<b>C. The Nonlinear Theory</b>	418
6. The Fréchet Differential	418
7. Fixed Point Theorems	423
8. Application of the Fixed Point Theorems to Nonlinear Operator Equations	434
9. More General Nonlinear Integral Equations	437
<b>CHAPTER 12</b>	
<b>Real Functions, D. Kurepa and B. Schön</b>	446
1. Basic Concepts of the Descriptive Theory of Sets and Functions	448
2. Continuous Functions	454
3. $F_\sigma$ - and $G_\delta$ -Sets	456
4. Construction of More Complicated Sets and Functions by Limit Processes	458
5. Some Interesting Types of Functions	463
6. Analytic Sets (A-Sets)	465
7. Questions of Constructibility and Existence	474
<b>CHAPTER 13</b>	
<b>Analysis and Theory of Numbers, D. Kurepa and B. Schön</b>	479
1. Invasion of the Theory of Numbers by Analysis	480

2. Analysis and Questions of Transcendence	491
3. General Remarks on the Relation between Analysis and Number Theory	500
<b>CHAPTER 14</b>	
<b>The Changing Structure of Modern Mathematics, G. Köthe and F. Ballier</b>	<b>505</b>
1. Introduction	505
2. The Development of the Axiomatic Method in Geometry	507
3. The Theory of Sets and Mathematical Logic	508
4. Change in the Attitude Toward Algebra	509
5. The Axiomatic Method in Analysis	512
6. Development in Other Mathematical Disciplines	518
7. Mathematics as a Hierarchy of Structures	520
8. The Bourbaki Construction of Mathematics	523
 Index	 529
