INTRODUCTION

I.	The Cumulative Binomial Probability Distribution	xi
II.	Preparation of the Tables.	xx
III.	Interpolation.	xxiv
IV.	Applications	xxxiv
	Example 1. General uses	xxxiv
	Example 2. Non-parametric tests for order	xxxvi
	Example 3. Genetic ratios	xxxvii
	Example 4. Testing for change in a 2×2 table.	xxxvii
	Example 5. Binomial confidence limit charts	xxxviii
	Example 6. Approximations for 2×2 contingency table probabilities	xl
	Example 7. Approximation for the general matching problem	xlii
	Example 8. The beta distribution.	xliii
	Example 9. One-sided tolerance limits	xliv
	Example 10. Percentage points of the F distribution.	xlvi
	Example 11. The incomplete gamma function.	xlvii
	Example 12. Summing the Poisson distribution	li
	Example 13. Ordinates of the beta distribution	lii
	Example 14. Terms of the negative binomial distribution.	lii
	Example 15. Summing the hypergeometric; Fisher's exact test; exact treatment of single-sample operating characteristics	lii
	Example 16. The Gram-Charlier Type B series.	lvi
	Example 17. Operating characteristics for double sampling plans.	lix
