Contents

Preface *page* vii

1	Some mathematical language	1
2	Sets and functions	8
3	Equivalence relations and quotient sets	18
4	Number systems I	20
5	Groups I	25
6	Rings and fields	30
7	Homomorphisms and quotient algebras	34
8	Vector spaces and matrices	38
9	Linear equations and rank	46
10	Determinants and multilinear mappings	51
11	Polynomials	55
12	Groups II	58
13	Number systems II	65
14	Fields and polynomials	72
15	Lattices and Boolean algebra	75
16	Ordinal numbers	80
17	Eigenvectors and eigenvalues	83
18	Quadratic forms and inner products	87
19	Categories and functors	94
20	Metric spaces and continuity	99
21	Topological spaces and continuity	105
22	Metric spaces II	108
23	The real numbers	113
24	Real-valued functions of a real variable	115
25	Differentiable functions of one variable	122
26	Functions of several real variables	126
27	Integration	134
28	Infinite series and products	140
29	Improper integrals	146

30 Curves and arc length *page* 150
31 Functions of a complex variable 153
32 Multiple integrals 159
33 Logarithmic, exponential and trigonometric functions 162
34 Vector algebra 168
35 Vector calculus 173
36 Line and surface integrals 177
37 Measure and Lebesgue integration 184
38 Fourier series 192

Appendix 1 Some 'named' theorems and properties 198
Appendix 2 Alphabets used in mathematics 215

Index of symbols 217
Subject index 225
