CONTENTS

Foreword vii

1. Introduction ix
2. Some properties of the tabulated functions xi
3. Arrangement and computation of the tables, and methods for their use xvi
4. Application of the functions $e_n(t)$ and $\tilde{e}_n(t)$ to the asymptotic solution of differential equations xx
5. An example of the asymptotic solution of a differential equation xxvii
6. Use of the tables in connection with toroidal shells and in solving other problems xxviii

References xxxiii

Table I. The functions $e_n(t)$ for $t = is$ and their derivatives with respect to s; $e_n(is) = R(e_n) + iI(e_n)$; $e_n' = de_n/ds = R(e_n') + iI(e_n')$; $0 \leqq s \leqq 9$; $n = 0, 1, 2$ 1

Table II. The functions $e_0(t)$, $e_1(t)$, $e_2(t)$ and their derivatives for real t; $0 \leqq t \leqq 10$; $-1 \leqq t \leqq 0$ 39

Table III. The functions $\tilde{e}_0(t)$, $\tilde{e}_1(t)$, $\tilde{e}_2(t)$ and their derivatives for real t; $-10 \leqq t \leqq 0$; $0 \leqq t \leqq 1$ 63

Supplement. Table IV. The Airy functions $h_1(t)$ and $h_2(t)$ for $t = is$ and their derivatives h_1' and h_2' with respect to s; $d^2h_k/dt^2 + th_k = 0$; $h_k = R(h_k) + iI(h_k)$; $h_k' = dh_k/ds = R(h_k') + iI(h_k')$; $0 \leqq s \leqq 6$; $k = 1, 2$ 87
