Contents

1 Abstract Group Theory 1

1.1 What is a Group?, 1
1.2 The Multiplication Table, 9
1.3 Conjugate Elements and Classes, 11
1.4 Subgroups, 13
1.5 Direct Product of Groups, 17
1.6 Isomorphism and Homomorphism, 18
1.7 Permutation Groups, 20
1.8 Distinct Groups of a Given Order, 22
Problems on Chapter 1, 25
Bibliography for Chapter 1, 29

2 Hilbert Spaces and Operators 30

2.1 Vector Spaces and Hilbert Spaces, 30
2.2 Coordinate Geometry and Vector Algebra in a New Notation, 35
2.3 Function Spaces, 42
2.4 Operators, 46
2.5 Direct Sum and Direct Product of Matrices, 53
Problems on Chapter 2, 56
Bibliography for Chapter 2, 57

3 Representation Theory of Finite Groups 58

3.1 Introduction, 58
3.2 Invariant Subspaces and Reducible Representations, 61
3.3 The Schur's Lemmas and the Orthogonality Theorem, 67

3.4 Interpretation of the Orthogonality Theorem, 73
3.5 Characters of a Representation, 74
3.6 The Example of C_{4v}, 79
3.7 The Regular Representation, 87
3.8 Symmetrized Basis Functions for Irreducible Representations, 89
3.9 Other Reducible Representations, 97
3.10 Direct Product of Representations, 98
3.11 Representations of a Direct Product Group, 102
Problems on Chapter 3, 106
Bibliography for Chapter 3, 108

4 CONTINUOUS GROUPS AND THEIR REPRESENTATIONS 109
4.1 Topological Groups and Lie Groups, 110
4.2 The Axial Rotation Group $SO(2)$, 117
4.3 The Three-Dimensional Rotation Group $SO(3)$, 120
4.4 The Lorentz Group, 128
4.5 The Special Unitary Group $SU(2)$, 130
4.6 Generators of $U(n)$ and $SU(n)$, 140
4.7 Lie Algebra and Representations of a Lie Group, 142
4.8 The Special Unitary Group $SU(3)$, 145
Problems on Chapter 4, 149
Bibliography for Chapter 4, 150

5 GROUP THEORY IN QUANTUM MECHANICS. I 151
5.1 Hilbert Spaces in Quantum Mechanics, 152
5.2 Transformations of a Function, 155
5.3 Space and Time Displacements, 158
5.4 Symmetry of the Hamiltonian, 161
5.5 Reduction due to Symmetry, 165
5.6 Perturbation and Level Splitting, 171
5.7 The Matrix Element Theorem and Selection Rules, 173
5.8 Dynamical Symmetry, 177
5.9 Time-Reversal and Space Inversion Symmetries, 184
Problems on Chapter 5, 191
Bibliography for Chapter 5, 191

6 GROUP THEORY IN QUANTUM MECHANICS. II 192
6.1 Atomic Symmetries, 193
6.2 Selection Rules for Atomic Transitions, 201
6.3 Zeeman Effect, 202

6.4 Addition of Angular Momenta, 204
6.5 Irreducible Tensor Operators, 215
6.6 Matrix Elements of Tensor Operators, 224
Problems on Chapter 6, 227
Bibliography for Chapter 6, 228

7 CRYSTALLOGRAPHIC AND MOLECULAR SYMMETRIES 229
7.1 Crystallographic Point Groups, 230
7.2 Translation Group and the Space Groups, 238
7.3 Molecular Point Groups, 242
7.4 Irreducible Representations of Point Groups, 244
7.5 The Double Group, 254
7.6 Crystal Field Splitting of Atomic Levels, 260
Problems on Chapter 7, 263
Bibliography for Chapter 7, 264

8 GROUP THEORY IN SOLID STATE PHYSICS 265
8.1 The Problem of the Electronic Structure of Crystals, 265
8.2 Translation Group and the Reciprocal Lattice, 267
8.3 Irreducible Representations of a Space Group, 273
8.4 Free Electron Energy Bands: One- and Two-Dimensional Lattices, 282
8.5 Free Electron Energy Bands: Three-Dimensional Lattices, 289
8.6 Energy Bands of Real Crystals, 296
Problems on Chapter 8, 303
Bibliography for Chapter 8, 304

APPENDIX A: Elastic Constants of Crystals 305
APPENDIX B: Piezoelectricity and Dielectric Susceptibility 313
APPENDIX C: Time-Reversal Symmetry and Degeneracy 318
APPENDIX D: Functions and Mappings 322
