|----------------------------------------------------------------------------------------------------------------------|------------|
| <b>I. Expansion in Series of Orthogonal Functions and Preliminary Notions of Hilbert Space . . . . .</b>             | <b>1</b>   |
| 1. Square Integrable Functions . . . . .                                                                             | 1          |
| 2. Linearly Independent Functions . . . . .                                                                          | 2          |
| 3. Elementary Notions of Hilbert Space . . . . .                                                                     | 5          |
| 4. Linear Approximations to Functions. . . . .                                                                       | 10         |
| 5. Convergence in the Mean. . . . .                                                                                  | 12         |
| 6. Expansion in Series of Orthogonal Functions. . . . .                                                              | 18         |
| 7. Orthogonal Cartesian Systems of Hilbert Space. . . . .                                                            | 26         |
| 8. $L^p$ Integrability. The Hölder-Riesz and the Minkowski Inequalities . . . . .                                    | 31         |
| 9. Generalized Convergence in the Mean of Order $p$ . . . . .                                                        | 34         |
| <b>II. Expansions in Fourier Series . . . . .</b>                                                                    | <b>39</b>  |
| 1. Approximation in the Mean of a Function by a Trigonometric Polynomial of Order $n$ . . . . .                      | 39         |
| 2. Convergence in the Mean of the Fourier Series of a Square Integrable Function . . . . .                           | 41         |
| 3. Continuous Functions: Sufficient Conditions for Pointwise Convergence . . . . .                                   | 49         |
| 4. Criteria for Pointwise Convergence . . . . .                                                                      | 55         |
| 5. Term by Term Integration of the Fourier Series: The Hardy-Littlewood Criterion for Pointwise Convergence. . . . . | 78         |
| 6. Fejér $(C, 1)$ Summability of Fourier Series. . . . .                                                             | 86         |
| 7. $(C, k)$ Summability ( $k > 0$ ) of Fourier Series. . . . .                                                       | 107        |
| 8. Poisson's Method of Summing Fourier Series. . . . .                                                               | 114        |
| 9. The Fourier Integral. . . . .                                                                                     | 120        |
| 10. Gibbs' Phenomenon . . . . .                                                                                      | 141        |
| 11. Inequalities for the Partial Sums of Fourier Series of a Function of Bounded Variation . . . . .                 | 148        |
| 12. Applications of Fourier Series. . . . .                                                                          | 150        |
| 13. The Fourier Transform. . . . .                                                                                   | 158        |
| <b>III. Expansions in Series of Legendre Polynomials and Spherical Harmonics . . . . .</b>                           | <b>169</b> |
| 1. Legendre Polynomials . . . . .                                                                                    | 169        |
| 2. Schläfli's Integral Formula . . . . .                                                                             | 175        |
| 3. Differential Equations of Legendre Polynomials . . . . .                                                          | 175        |
| 4. Recurrence Formulas for Legendre Polynomials. . . . .                                                             | 176        |
| 5. The Christoffel Formula of Summation . . . . .                                                                    | 179        |

|                                                                                                                           |            |
|---------------------------------------------------------------------------------------------------------------------------|------------|
| 6. Laplace's Integral Formula for $P_n(x)$ . . . . .                                                                      | 180        |
| 7. Mehler's Formulas . . . . .                                                                                            | 182        |
| 8. Zeros of the Legendre Polynomials: Bruns' Inequalities . . . . .                                                       | 186        |
| 9. The Complete Orthonormal System $\{[\frac{1}{2}(2n+1)]^{\frac{1}{2}}P_n(x)\}$ . . . . .                                | 189        |
| 10. Stieltjes' Bounds for Legendre Polynomials . . . . .                                                                  | 195        |
| 11. Series of Legendre Polynomials for Functions of Bounded Variation: Picone's and Jackson's Theorems . . . . .          | 202        |
| 12. Formulas and Series for Asymptotic Approximation of Legendre Polynomials . . . . .                                    | 208        |
| 13. Limits of Integrals: Singular Integrals . . . . .                                                                     | 216        |
| 14. Convergence of Series of Legendre Polynomials: Hobson's Theorem . . . . .                                             | 220        |
| 15. Series of Stieltjes-Neumann . . . . .                                                                                 | 240        |
| 16. Series of Legendre Polynomials for a Finite Interval . . . . .                                                        | 244        |
| 17. Ferrers' Functions Associated with Legendre Functions . . . . .                                                       | 246        |
| 18. Harmonic Polynomials and Spherical Harmonics . . . . .                                                                | 253        |
| 19. Integral Properties of Spherical Harmonics and the Addition Theorem for Legendre Polynomials . . . . .                | 263        |
| 20. Completeness of Spherical Harmonics with Respect to Square Integrable Functions . . . . .                             | 270        |
| 21. Laplace Series for an Integrable Function . . . . .                                                                   | 272        |
| 22. Criterion for Pointwise Convergence of Laplace Series . . . . .                                                       | 273        |
| 23. $(C, k)$ Summation of Laplace Series . . . . .                                                                        | 275        |
| 24. Poisson Summation of Laplace Series . . . . .                                                                         | 287        |
| 25. The Poisson Sum of Legendre Series . . . . .                                                                          | 291        |
| <b>IV. Expansions in Laguerre and Hermite Series . . . . .</b>                                                            | <b>295</b> |
| 1. Laguerre Polynomials . . . . .                                                                                         | 295        |
| 2. Hermite Polynomials and Tchebychef Orthogonal Polynomials . . . . .                                                    | 303        |
| 3. Zeros of the Hermite and Laguerre Polynomials . . . . .                                                                | 312        |
| 4. Relations between the Polynomials $L_n^{(\alpha)}(x)$ and $H_n(x)$ . . . . .                                           | 318        |
| 5. Formulas for Asymptotic Approximation of the Polynomials $H_n(x)$ . . . . .                                            | 320        |
| 6. Formulas for Asymptotic Approximation of the Polynomials $L_n^{(\alpha)}(x)$ . . . . .                                 | 333        |
| 7. Completeness of the Polynomials $L_n^{(\alpha)}(x)$ and $H_n(x)$ with Respect to Square Integrable Functions . . . . . | 349        |
| 8. Bessel's Equality for Infinite Intervals . . . . .                                                                     | 355        |
| 9. Criteria for Uniform Convergence of the Series of Polynomials $L_n^{(\alpha)}(x)$ and $H_n(x)$ . . . . .               | 361        |
| 10. Pointwise Convergence of the Series of Type $h$ and Uspensky's Criterion for Convergence . . . . .                    | 371        |
| 11. Series of Laguerre Polynomials . . . . .                                                                              | 382        |
| APPENDIX . . . . .                                                                                                        | 386        |
| BIBLIOGRAPHY . . . . .                                                                                                    | 399        |
| INDEX . . . . .                                                                                                           | 409        |
