Contents

PART A
LIE GROUPS AND ALGEBRAS

Chapter 1 Lie Groups

1. Continuous Groups: Covering Groups 3
2. The Rotation Group in R^3 6
3. The Möbius Group 8
4. The Covering Group of $SO(3)$ 10
5. The Lorentz Group 16
6. The Classical Groups 18

Chapter 2 Lie Algebras

7. Real and Complex Lie Algebras 21
8. Representations of Lie Algebras 24
9. Some Important Concepts and Examples in Lie Algebras 26
10. The Classical Lie Algebras 29

Chapter 3 Lie Groups and Algebras: Matrix Approach

11. Exponentials and Logs 32
12. Automorphisms and Derivations 38

Chapter 4 Applications to Physics and Vice Versa

13. Poisson Brackets and Quantization 41
14. Motion of a Rigid Body; Euler's Equations 44

15. The Harmonic Oscillator and Boson Calculus 48
16. Boson Realizations of Lie Algebras 51

PART B
DIFFERENTIAL GEOMETRY AND LIE GROUPS

Chapter 5 Calculus on Manifolds

17. Vector Fields, Flows, and 1-Forms 57
18. Differential Forms and Integration 63
19. Transformation Groups and Frame Invariance 67
20. The Lie Derivative 73

Chapter 6 Symmetry Groups of Differential Equations

21. Group Actions on Jet Bundles 76
22. Infinitesimal Symmetries of Differential Equations 80
23. Symmetries and Conservation Laws 85

Chapter 7 Invariant Forms on Lie Groups

24. Invariant Forms on Linear Groups 89
25. The Maurer–Cartan Equations 94
26. Geometry "à la Cartan" 96
27. Variations on a Theme by Euler 105

Chapter 8 Lie Groups and Algebras: Differential Geometric Approach

28. The Maurer–Cartan Equations, *bis* 109
29. Construction of the Group from the Algebra 113

PART C
ALGEBRAIC THEORY

Chapter 9 General Structure of Lie Algebras

30. Ideals, Solvability, and Nilpotency 119
31. Theorems of Lie and Engels 123
32. Cartan's Criteria 127

Chapter 10 Structure of Semi-Simple Lie Algebras

33. Weyl–Chevalley Normal Form 130
34. Cartan Subalgebras, and Root Space Decompositions 134

35. Root Figures and Dynkin Diagrams 140
36. The Classical Algebras 147

Chapter 11 Real Forms

37. Compact Real Forms; Weyl's Theorem 153
38. Cartan Decompositions 156

PART D
REPRESENTATION THEORY

Chapter 12 Representation Theory

39. The Eight-Fold Way 163
40. Weights and Weight Vectors 170
41. Tensor Products 175
42. Enveloping Algebras and Casimir Operators 179

Chapter 13 Spinor Representations

43. Looking Glass Zoo 181
44. Clifford Algebras 182

PART E
APPLICATIONS

Chapter 14 Applications

45. Completely Integrable Systems 189
46. Spontaneous Symmetry Breaking 200

Bibliography 208

Index 213
