FOREWORD TO THE ENGLISH EDITION	xiii

Introduction

0.1 Definition and Examples	1
0.2 History	5

PART I

Equations for Functions of a Single Variable

1. Equations Which Can Be Solved by Simple Substitutions

1.1 Equations of the Form $f[G(x, y)] = F[f(x), y]$	15
1.1.1 Two Trivial Examples	15
1.1.2 A Method of Solution for Equations of the Form $f(x + y) = F[f(x), y]$	17
1.1.3 Continuity and Monotonicity	19
1.1.4 Uniqueness	20
1.1.5 Method of Solution for $f[G(x, y)] = F[f(x), y]$	21
1.2 Methods of Solving Similar Types of Equations	21
1.2.1 The Type of Equation	21
1.2.2 The More General Case	22
1.2.3 The Case in Which $f(y)$ Does Not Appear in the Equation	24
1.2.4 Additional Examples	25
1.3 An Application: Scalar Product and Vector Product	27
1.3.1 Statement of the Problem	27
1.3.2 Preliminaries	28
1.3.3 Reduction to a Functional Equation and Completion of the Proof	29

2. Solution of Equations by Determining the Values of the Unknown Function on a Dense Set

2.1 Cauchy's Equations and Jensen's Equation	31
2.1.1 Cauchy's Basic Equation $f(x + y) = f(x) + f(y)$	31
2.1.2 The Three Remaining Cauchy Equations	37
2.1.3 Jensen's Equation	43

2.1.4	Jensen's Equation and Cauchy's Equations for an Interval and for Higher Ranks	44
2.2	Equations of the Type $f(x + y) = F[f(x), f(y)]$, Related Equations, and Generalizations	49
2.2.1	Method of Solution for Equations of the Type $f(x + y) = F[f(x), f(y)]$	49
2.2.2	Existence	53
2.2.3	Uniqueness. Solutions on an Interval Which Have a Measurable Majorant on a Set of Positive Measure	57
2.2.4	Functions with an Addition Theorem of Polynomial, Rational, or Algebraic Type. Special Equations of the Type $f[G(x, y)] = F[f(x), f(y)]$	59
2.2.5	Equations of the Type $f(x + y) = F[f(x - y), f(x), f(y), x, y]$	63
2.2.6	Equations of the Form $f(ax + by + c) = Af(x) + Bf(y) + C$	66
2.2.7	Equations of the Type $f(ax + by + c) = F[f(x), f(y)]$	72
2.2.8	Additional Examples	79
2.3	Some Applications (Euclidean and Non-Euclidean Geometry, Mechanics, Business Mathematics, Probability Theory)	83
2.3.1	Arc Length of Oricycles, Angle of Parallelity in Non-Euclidean Geometry	83
2.3.2	Applications in Classical Geometry	85
2.3.3	Applications in Physics. Force Fields in Which Centers of Gravity Can Be Defined	94
2.3.4	The Interest Formula	105
2.3.5	Two Characteristic Properties of the Gaussian Normal Distribution .	106
2.3.6	Composed Poisson Distribution	111
2.4	D'Alembert's Functional Equation and Its Application	117
2.4.1	The Functional Equation $f(x + y) + f(x - y) = 2f(x)f(y)$	117
2.4.2	Application to the Problem of the Parallelogram of Forces	120
2.4.3	Application to Non-Euclidean Mechanics and Geometry	125
2.4.4	Generalization of the Method of Solution to Equations of the Form $f(x + y) = F[f(x - y), f(x), f(y), x, y]$	128
2.5	Additional Functional Equations with One Function of One Variable	129
2.5.1	Functional Equations of Polynomials	129
2.5.2	Additional Functional Equations for Trigonometric and Related Functions	135
3.	Equations with Several Unknown Functions	
3.1	Pexider's and Related Equations	141
3.1.1	Direct Generalizations of the Four Cauchy Equations	141
3.1.2	A Method of Solution for Equations of Type $f[F(x, y)] = \Phi[g[G(x, y)], h[H(x, y)]]$. Uniqueness of the Representation $f^{-1}(g(x) + h(y))$	145
3.1.3	Related Functional Equations and Applications to Quasilinear Functions and in Information Theory	148
3.1.4	The Functional Equation $\sum_{k=1}^n f_k(x)g_k(y) = 0$	160

3.2	Functional Equations for the Trigonometric Functions and Related Equations.	165
3.2.1	Wilson's First Generalization of d'Alembert's Functional Equation .	165
3.2.2	Wilson's Second Generalization of d'Alembert's Functional Equation .	171
3.2.3	The Addition and Subtraction Theorems of Trigonometric Functions	176
3.2.4	Additional Equations and Systems of Equations	181
4. Reduction to Differential and Integral Equations, General Methods		
4.1	Integral Transformations and Reduction to Integral Equations.	183
4.1.1	Reduction to Trivial Functional Equations by Means of Integral Transformations	183
4.1.2	Reduction to Integral Equations	185
4.2	Reduction to Differential Equations. Some General Methods	186
4.2.1	Formal Considerations.	186
4.2.2	Deduction of Differentiability from Integrability	190
4.2.3	General Theorems	193
4.2.4	Reduction of Functional Equations with Several Unknown Functions to Differential Equations	196
4.2.5	A General Method for Solving a Type of Functional Equation Containing Several Unknown Functions	201

PART II

Equations for Functions of Several Variables

5. Simple Equations		
5.1	Generalizations of Cauchy's and Similar Equations and Their Applications	213
5.1.1	The Cauchy-Abel Functional Equations for Functions of Several Variables and for Functions of Complex Variables	213
5.1.2	Sincov's Functional Equation and Its Applications. The Cyclic Functional Equation	223
5.2	The Equations of Homogeneous Functions and Related Equations	229
5.2.1	Euler's Functional Equation for Homogeneous Functions	229
5.2.2	Additional Related Equations. Almost Homogeneous Functions	231
5.3	The Equations of the Weighted Mean	234
5.3.1	Characterization of the Arithmetic Mean	234
5.3.2	Characteristic Properties of the Quasilinear Weighted Mean	240

6. Composite Equations

6.1	The Translation Equation	245
6.1.1	The Equation and Introductory Remarks Concerning Its Solution . .	245
6.1.2	Solution for Arbitrary Real Values of u	246
6.1.3	Solutions for a Semi-infinite u -Interval	248
6.1.4	Applications and a Generalization	251
6.2	The Associativity Equation	253
6.2.1	The Equation and Its Solution for Groups	253
6.2.2	Solution in the Case of Semigroups	254
6.2.3	Solution in the Case of Semineighborhoods of Identity. Related Equations	267
6.3	The Transitivity Equation	273
6.3.1	General Algebraic Considerations	273
6.3.2	Solution in the Field of Real Numbers	276
6.4	The Bisymmetry Equation	278
6.4.1	The Equation and Its Symmetric Reflexive Solutions	278
6.4.2	Reflexive Solutions without Assumption of Symmetry	284
6.4.3	The General Continuous and Reducible Solution	287
6.5	The Autodistributivity Equations	293
6.5.1	The Autodistributivity Equations. Solution for the Symmetric Case .	293
6.5.2	Determination of the Continuous, Reducible Operations That Are Autodistributive on Both Sides on Intervals of Real Numbers . .	294
6.5.3	A Problem	299

7. Equations with Several Unknown Functions of Several Variables. Reduction to Partial Differential Equations

7.1	Equations with Several Unknown Functions That Are Solvable by Elementary Methods	301
7.1.1	General Pexider-Sincov Equations with Several Unknown Functions of Several Variables	301
7.1.2	Generalized Homogeneous Functions	304
7.1.3	Special Cases of the Generalized Equations of Associativity, Transitivity, Bisymmetry, and Distributivity That Can Be Solved by Elementary Methods	310
7.1.4	An Application to the Foundations of Probability Theory	319
7.2	Reduction to Partial Differential Equations and Functional Differential Equations	324
7.2.1	Euler's Differential Equation of Homogeneous Functions. Related Equations and Generalizations	324
7.2.2	The Generalized Associativity Equation	327
7.2.3	The Generalized Bisymmetry Equation	330
7.2.4	The Generalized Distributivity Equation and Special Cases	332

8. Vector and Matrix Equations

8.1	Cauchy-Pexider-Sincov Equations	347
8.1.1	Cauchy-Pexider Vector Functional Equations	347
8.1.2	Some Simple Matrix Functional Equations	349
8.1.3	Generalizations of Sincov's Functional Equation	353
8.1.4	Application to the Determination of Inhomogeneous Transition Probabilities	359
8.2	Associativity, Transformation, and Distributivity Equations	364
8.2.1	The Transformation Equation	364
8.2.2	The Translation Equation	366
8.2.3	The Associativity Equation	370
8.2.4	The Generalized Distributivity Equation	372
8.2.5	Vector Operations, Which Are Automorphic with Respect to Certain Transformations	376

Concluding Remarks. Some Unsolved Problems	379
