## Chapter 1. The Origin of Nonlinear Equations

|  |    |
|--|----|
| Introduction   | 1  |
| 1.1 What Is Nonlinearity?  | 2  |
| 1.2 Other Departures from Linear Theory                              | 4  |
| 1.3 Literature   | 6  |
| 1.4 Examples in Kinetics   | 8  |
| 1.5 Heat Transfer and Chemical Reaction                              | 10 |
| 1.6 Equations from ad-hoc Methods for Partial Differential Equations | 11 |
| 1.7 Equations from Similarity Solutions                              | 16 |
| 1.8 Population Growth and Other Problems in Biological Sciences      | 17 |
| 1.9 Radiation Heat Transfer  | 19 |
| References   | 20 |

## Chapter 2. Exact Methods of Solution

|                                   |    |
|-----------------------------------|----|
| Introduction                      | 23 |
| <b>FIRST ORDER EQUATIONS</b>      | 24 |
| 2.1 The Integrating Factor        | 24 |
| 2.2 Homogeneous Equation          | 28 |
| 2.3 General First Order Equations | 32 |

|      |  |    |
|------|--|----|
| 2.4  | Solution by Transformation                       | 34 |
| 2.5  | Further Solution by Differentiation              | 40 |
|      | SECOND ORDER EQUATIONS                           | 41 |
| 2.6  | The Simplest Equations                           | 42 |
| 2.7  | Elliptic Integrals                               | 47 |
| 2.8  | Elliptic Functions                               | 52 |
| 2.9  | Equations with Form Homogeneity                  | 56 |
| 2.10 | Raising the Order                                | 57 |
| 2.11 | A Transformation of Euler                        | 58 |
| 2.12 | Equations Equivalent to Linear Equations         | 60 |
| 2.13 | The Group Concept                                | 65 |
| 2.14 | Infinitesimal Transformations                    | 68 |
| 2.15 | Representation of Infinitesimal Transformations  | 70 |
| 2.16 | Invariant Functions                              | 74 |
| 2.17 | Invariant Points, Curves, and Families of Curves | 75 |
| 2.18 | The Extended Group                               | 77 |
| 2.19 | Integration of First Order Equations             | 78 |
| 2.20 | Equations Invariant under Specific Groups        | 81 |
| 2.21 | Extension to Second Order Equations              | 83 |
|      | References                                       | 84 |

### Chapter 3. Examples from Transport Phenomena

|     |  |     |
|-----|--|-----|
|     | Introduction   | 87  |
| 3.1 | Matrices and Chemical Reactions                        | 87  |
| 3.2 | Kinetics and the $Z$ Transform                         | 94  |
| 3.3 | Kinetics and Heat Transfer                             | 101 |
| 3.4 | Equations of Lane–Emden Type                           | 105 |
| 3.5 | Some Similarity Equations from Fluid Mechanics         | 109 |
| 3.6 | Conversion of Boundary Value to Initial Value Problems | 121 |
| 3.7 | Nonlinear Equations from Diffusion                     | 127 |
|     | References   | 132 |

### Chapter 4. Approximate Methods

|     |                                  |     |
|-----|----------------------------------|-----|
|     | Introduction                     | 135 |
| 4.1 | Some Mathematical Properties     | 136 |
| 4.2 | Series Expansion                 | 140 |
| 4.3 | Methods of Iteration             | 148 |
| 4.4 | Operational Iterative Methods    | 152 |
| 4.5 | Application of Iterative Methods | 161 |
| 4.6 | Regular Perturbation             | 165 |

|      |  |     |
|------|--|-----|
| 4.7  | Shohat's Expansion                           | 170 |
| 4.8  | Singular Perturbation                        | 172 |
| 4.9  | The Method of Strained Coordinates           | 179 |
| 4.10 | Comparison of the Two Preceding Methods      | 183 |
| 4.11 | Weighted Residual Methods—General Discussion | 184 |
| 4.12 | Example of Weighted Residuals                | 190 |
| 4.13 | Comments on the Method of Weighted Residuals | 194 |
| 4.14 | Quasilinearization                           | 196 |
| 4.15 | Applications of Quasilinearization           | 200 |
| 4.16 | Other Methods of Approximation               | 202 |
|      | References                                   | 205 |

## Chapter 5. Numerical Methods

|              |   |     |
|--------------|---|-----|
| Introduction | 209   |     |
| 5.1          | Finite Differences                          | 212 |
| 5.2          | One Step Methods                            | 216 |
| 5.3          | Runge-Kutta Methods                         | 218 |
| 5.4          | Simultaneous Equations                      | 223 |
| 5.5          | Multi-Step Methods                          | 224 |
| 5.6          | Choice of Predictor-Corrector Method        | 228 |
| 5.7          | Boundary Value Problems                     | 232 |
| 5.8          | Components of an Electronic Analog Computer | 235 |
| 5.9          | Analog Circuits for Simple Operations       | 239 |
| 5.10         | Scaling Procedures and Initial Conditions   | 241 |
| 5.11         | Examples                                    | 245 |
|              | References                                  | 249 |

## Appendix. Similarity Variables by Transformation Groups

|            |     |
