Introduction 1

1 Aim and Scope 1
2 Neumann Problems 2
3 Introduction of Internal Approximations 5
4 Properties of Internal Approximations 7
5 Stability, Optimal Stability, and Regularity of the Convergence 9
6 The Case of Operators Mapping a Hilbert Space onto Its Dual 10
7 Finite-Element Approximations of Sobolev Spaces 12
8 Approximation of Nonhomogeneous Neumann Problems 14
9 Approximations of Nonhomogeneous Dirichlet Problems 16
10 A Posteriori Error Estimates 20
11 External and Partial Approximations 21
12 General Outline 24

1 *Approximation of Solutions of Neumann Problems for Second-Order Linear Differential Equations* 25

1 Weak Solutions of Neumann Problems for Second-Order Linear Differential Operators 25

1-1 The Neumann Boundary-Value Problem 25
1-2 Definition of Distributions 26
1-3 Weak Derivatives of a Distribution 26
1-4 Variational Formulation of the Problem 27
1-5 Weak Solutions of the Neumann Boundary-Value Problem 27
1-6 Sobolev Spaces 29
1-7 The Lax-Milgram Theorem 30

2 Approximation of an Abstract Variational Problem 31

2-1 The Galerkin Approximation of a Separable Hilbert Space 31
2-2 Approximation of a Hilbert Space 32
2-3 Internal Approximation of a Variational Equation 33
2-4 Existence, Uniqueness, and Convergence Properties 34
2-5 Estimates of Global Error 35
2-6 What Kind of Approximations Should Be Chosen? 36

3 Two Examples of Approximations of Sobolev Spaces 37

3-1 Cosine Approximations of the Sobolev Space $H^1(I)$ 37
3-2 Piecewise-Linear Approximations of the Sobolev Space $H^1(I)$ 39
3-3 Estimates of Error Functions of Piecewise-Linear Approximations 40

4 Examples of Approximate Equations 42

4-1 Construction of a Finite-Difference Scheme 42
4-2 A Simpler Finite-Difference Scheme 44
4-3 A More Complicated Approximate Equation 45

2 *Approximations of Hilbert Spaces* 47

1 Hilbert Spaces and Their Duals 47

1-1 Dual of a Hilbert Space and Canonical Isometry 48
1-2 Example: Finite-Dimensional Hilbert Spaces 49
1-3 Hahn-Banach Theorem 49
1-4 Dual of a Dense Subspace 50
1-5 Imbedding of a Space into Its Dual 51
1-6 Example: Imbedding of Spaces of Functions into Spaces of Distributions 52
1-7 Dual of Closed Subspaces and Factor Spaces 53
1-8 Applications to Error Estimates 54
1-9 Dual of a Product 55
1-10 Dual of Domains of Operators 56
1-11 Examples: Dual of Sobolev Spaces $H_0^m(I)$ 57
1-12 Properties of Bounded Sets of Operators; Uniform Boundedness 58
1-13 Banach Theorem 59
1-14 Dual of Sobolev Spaces $H^m(I)$ 60
1-15 The Riesz-Fredholm Alternative 62
1-16 V-Elliptic and Coercive Operators 62

2 Quasi-Optimal Approximations 64

2-1 Stability Functions 65
2-2 Duality Relations between Error and Stability Functions 65
2-3 Estimates of the Stability Functions 66
2-4 Quasi-Optimal Approximations; Estimate of the Error Function 67
2-5 Truncation Errors and Error Functions 68

3 Optimal Approximations 68

3-1 Eigenvalues and Eigenvectors of Symmetric Compact Operators 69
3-2 Optimal Galerkin Approximations 70
3-3 Convergence and Optimality Properties 71
3-4 Spaces H_θ 72

4 Optimal Restrictions and Prolongations; Applications 74

4-1 Optimal Restrictions and Prolongations 75
4-2 Dual Approximations 76
4-3 Construction of Optimal Prolongations and Restrictions 77
4-4 Miscellaneous Remarks 78
4-5 Characterization of Error and Stability Functions 80
4-6 Spaces of Order θ 82

3 *Approximation of Operators* 84

1 Internal Approximations 84

1-1 Construction of an Internal Approximate Equation 85
1-2 The Case of Finite-Dimensional Discrete Spaces 86
1-3 The Case of Operators from V onto V' 86
1-4 Stability of Internal Approximations of Operators 87
1-5 Convergence and Error Estimates 88
1-6 Approximation of a Sum of an Isomorphism and a Compact Operator 90
1-7 Approximation of Coercive and V-Elliptic Operators 92
1-8 Optimal and Quasi-Optimal Stability 94

2 Regularity of the Convergence and Estimates of Error in Terms of n-Width 97

2-1 Stability and Convergence in Smaller Spaces 97
2-2 Stability and Convergence in Larger Spaces 100
2-3 Approximation of the Value of a Functional at a Solution 103

3 Discrete Convergence, Consistency, and Optimal Approximation of Linear Operators 104

3-1 Discrete Convergence and Consistency 105
3-2 Optimal Approximation of Operators and Internal Approximations 108
3-3 Estimates of Error and Discrete Errors 109

4 *Finite-Element Approximation of Functions of One Variable* 111

1 Approximation of Functions of L^2 by Step Functions and by Convolution 111

1-1 The Space L^2 and the Discrete Space L_h^2 112
1-2 The Prolongations p_h^0 112
1-3 The Restrictions r_h 112
1-4 The Theorem of Convergence 113
1-5 Convolution of Functions and Measures 114
1-6 Approximation by Convolution 117

2 Piecewise-Polynomial Approximations of Sobolev Spaces H^m 118

2-1 Finite-Difference Operators 118
2-2 Construction of Approximations of the Space H^m 119
2-3 Convergence Theorem 120
2-4 Explicit Form of Functions π_m 121
2-5 Properties of the Prolongations p_h^m 123
2-6 Estimates of the Stability Functions 125
2-7 Optimal Properties of Prolongations p_h^m 126

3 Finite-Element Approximations of Sobolev Spaces H^m 126

3-1 Finite-Element Approximations 127
3-2 The Criterion of m-Convergence 130
3-3 Characterization of Convergent Finite-Element Approximations 132
3-4 Stability Properties of Finite-Element Approximations 135

5 *Finite-Element Approximation of Functions of Several Variables* 137

1 Approximations of the Sobolev Spaces $H^m(R^n)$ 138

1-1 Notations 138
1-2 Finite-Element Approximations 140
1-3 $(2m + 1)^n$-Level Piecewise-Polynomial Approximations 143
1-4 $[2(2m)^n - (2m - 1)^n]$-Level Piecewise-Polynomial Approximations 144

2 Approximations of the Sobolev Spaces $H^m(\Omega)$ 151

2-1 Sobolev Spaces $H^m(\Omega)$ 151
2-2 Finite-Element Approximations of $H^m(\Omega)$ 152
2-3 Quasi-Optimal Finite-Element Approximations of $H^m(\Omega)$ 153
2-4 Piecewise-Polynomial Approximations of $H^m(\Omega)$ 156

3 Approximation of the Sobolev Spaces $H_0^m(\Omega)$ 159

3-1 Sobolev Spaces $H_0^m(\Omega)$ 159
3-2 Finite-Element Approximations of $H_0^m(\Omega)$ 161
3-3 Convergent Finite-Element Approximations of $H_0^m(\Omega)$ 161

6 *Boundary-Value Problems and the Trace Theorem* 164

1 Some Variational Boundary-Value Problems for the Laplacian 164

1-1 The Laplacian 165
1-2 Characterization of Sobolev Spaces $H_0^1(\Omega)$ 165
1-3 The Green Formula 166
1-4 The Dirichlet Problem for the Laplacian 167
1-5 The Neumann Problem for the Laplacian 168
1-6 A Mixed Problem for the Laplacian 169
1-7 An Oblique Problem for the Laplacian 170
1-8 Existence and Uniqueness of the Solutions 172

2 Variational Boundary-Value Problems and Their Adjoints 172

2-1 Spaces V, H and Operator γ 173
2-2 Formal Operator Λ Associated with $a(u, v)$ 174
2-3 The Green Formula 174
2-4 Abstract Neumann and Dirichlet Problems Associated with $a(u, v)$ 176
2-5 Mixed Type Boundary-Value Problems Associated with $a(u, v)$ 177
2-6 Existence and Uniqueness of the Solutions of Boundary-Value Problems 180
2-7 Formal Adjoint of an Operator and Green's Formula 184
2-8 Theorems of Regularity 186

3 The Trace Theorem and Properties of Sobolev Spaces 189

3-1 Statement of the Trace Theorem 189
3-2 Change of Coordinates 190
3-3 Sobolev Spaces $H^s(R^n)$ for Real Numbers s 191
3-4 Sobolev Spaces $H^s(\Gamma)$ and $H^s(\Omega)$ 192
3-5 Trace Operators and Operators of Extension: Theorems of Density 193

3-6 Properties of the Spaces $H^m(R^n_+)$ 196
3-7 Proof of the Trace Theorem 198
3-8 Derivatives of Vector-Valued Distributions 200
3-9 Sobolev Inequalities and the Trace Theorem in Space $H^s(\Omega)$ 202
3-10 Theorem of Compactness 203

7 *Examples of Boundary-Value Problems* 205

1 Boundary-Value Problems for Second-Order Differential Operators 205

1-1 Second-Order Linear Differential Operators 205
1-2 Elliptic Second-Order Partial Differential Operators 206
1-3 The Dirichlet Problem 207
1-4 The Neumann Problem 208
1-5 Mixed Problems 208
1-6 Oblique Problems 209
1-7 Interface Problems 210
1-8 The Regularity Theorem 212
1-9 Theorems of Isomorphism 215
1-10 Value of the Solution at a Point of the Boundary 216
1-11 Problems with Elliptic Differential Boundary Conditions 217

2 Boundary-Value Problems for Differential Operators of Higher Order 218

2-1 Linear Differential Operators of Order $2k$ 218
2-2 The Dirichlet Problem 219
2-3 The Neumann Problem 219
2-4 Regularity and Theorems of Isomorphism 220
2-5 Other Boundary-Value Problems 221
2-6 Boundary Value Problems for $\Delta^2 + \lambda$ 222

8 *Approximation of Neumann-Type Problems* 226

1 Theorems of Convergence and Error Estimates 226

1-1 Internal Approximation of a Neumann-type Problem 227
1-2 Convergence and Estimates of Error in Larger Spaces 229

2 Approximation of Neumann Problems for Elliptic Operators of Order $2k$ 233

2-1 Approximation of Neumann Problems for Elliptic Differential Operators 233
2-2 Convergence Properties of Finite Element Approximations of Neumann Problems 237

2-3 The $(2m + 1)^n$-Level Approximations of the Neumann Problem 239
2-4 The $[2(2m)^n - (2m - 1)^n]$-Level Approximations of the Neumann Problem 242
2-5 Approximations of the Spaces $H^k(\Omega, \Lambda)$ and $H(\Omega, \Lambda)$ 243

3 Approximation of Other Neumann-Type Problems 244

3-1 Approximation of the Value of the Solution at a Point of the Boundary 244
3-2 Approximation of Oblique Boundary-Value Problems 246
3-3 Approximation of a Problem with Elliptic Boundary Conditions 247
3-4 Approximation of Interface Problems 252
3-5 Approximation of the Neumann Problem for $\Delta^2 + \gamma$ 254

9 *Perturbed Approximations and Least-Squares Approximations* 256

1 Perturbed Approximations 256

1-1 Internal Approximation of a Variational Boundary-Value Problem 257
1-2 Perturbed Approximation of a Variational Boundary-Value Problem 258
1-3 Convergence in the Initial Space 259
1-4 Estimates of Error 261
1-5 Convergence in Smaller Spaces 263
1-6 Convergence in Larger Spaces 263

2 Perturbed Approximations of Boundary-Value Problems 265

2-1 Perturbed Approximations by Finite-Element Approximations 265
2-2 Error Estimates and Regularity of the Convergence 268
2-3 The 3^n-level Perturbed Approximation of the Dirichlet Problem 269

3 Least-Squares Approximations 271

3-1 Least-Squares Approximation Schemes 271
3-2 Error Estimates (I) 273
3-3 Error Estimates (II) 274
3-4 Least-Squares Approximations of Dirichlet Problems 279

10 *Conjugate Problems and A Posteriori Error Estimates* 284

1 Conjugate Problems of Boundary-Value Problems 284

1-1 First Example of a Conjugate Problem 284
1-2 Second Example of a Conjugate Problem 286
1-3 Construction of Conjugate Problems 289

2 Applications to the Approximation of Dirichlet Problems 297

2-1 Approximation of the Dirichlet Problem (I) 297
2-2 Approximation of the Dirichlet Problem (II) 299
2-3 The Case of Second-Order Differential Operators 300

3 Finite-Element Approximations of the Spaces $\mathbf{H}^k(\Omega, D^*)$ 301

3-1 Spaces $\mathbf{H}^k(\Omega, D^*)$ 301
3-2 Approximations of the Space $\mathbf{H}^k(\Omega, D^*)$ 302

4 Approximation of the Second Example of a Conjugate Problem 306

4-1 Approximation of the Conjugate Dirichlet Problem 306
4-2 Properties of the Discrete Conjugate Problem 310

11 *External and Partial Approximations* 311

1 External Approximations; Stability, Convergence, and Error Estimates 311

1-1 Definition of External Approximations 311
1-2 Example: Partial Approximations of a Finite Intersection of Spaces 314
1-3 Stability and Convergence of External Approximations of Operators 315
1-4 Estimates of Error and Regularity of the Convergence 316
1-5 Properties of the External Error Functions 318

2 External and Partial Approximations of Variational Equations 321

2-1 Partial Approximation of a Split Variational Equation 321
2-2 External Approximation of Variational Equations 323
2-3 Partial Approximation of Neumann Problems 325
2-4 Perturbed Partial Approximation of Boundary-Value Problems 328

3 Partial Approximations of Sobolev Spaces 332

3-1 Spaces $H(\Omega, D_i)$ 332
3-2 Partial Approximations of the Sobolev Space $H^1(\Omega)$ 333
3-3 Estimates of Truncation Errors and External Error Functions 336
3-4 Partial Approximations of the Sobolev Spaces $H^m(\Omega)$ and $H_0{}^m(\Omega)$ 338

4 Partial Approximation of Boundary-Value Problems 340

4-1 Partial Approximation of Second-Order Linear Operators 340
4-2 Partial Approximation of the Neumann Problem 342
4-3 Perturbed Partial Approximation of Mixed Boundary-Value Problems 344
4-4 Estimates of Error in the Interior 346
4-5 Partial Approximations of Higher-Order Differential Operators 347
