PREFACE	v
-------------------	---

INTRODUCTION

0.1.	Difference and Differential Equations	1
0.2.	The Invariance Property	4
0.3.	The Scalar Case	6
0.4.	All-Pass Transfer Functions	8
0.5.	Inverse Problems	11
0.6.	The General Orthogonal Case	13
0.7.	The Three-Term Recurrence Formula	15
0.8.	The 2-by-2 Symplectic Case	21

1—Boundary Problems for Rational Functions

1.1.	Finite Fourier Series	25
1.2.	The Boundary Problem	27
1.3.	Oscillation Properties	29
1.4.	Eigenfunctions and Orthogonality	31
1.5.	The Spectral Function	35
1.6.	The Characteristic Function	37
1.7.	The First Inverse Problem	39
1.8.	The Second Inverse Problem	42
1.9.	Moment Characterization of the Spectral Function	46
1.10.	Solution of a Moment Problem	51

2—The Infinite Discrete Case

2.1.	A Limiting Procedure	55
2.2.	Convergence of the Fundamental Solution	57
2.3.	Convergence of the Spectral Function	60
2.4.	Convergence of the Characteristic Function	62
2.5.	Eigenvalues and Orthogonality	63
2.6.	Orthogonality and Expansion Theorem	67
2.7.	A Continuous Spectrum	70
2.8.	Moment and Interpolation Problem	71

2.9.	A Mixed Boundary Problem	74
2.10.	A Mixed Expansion Problem	76
2.11.	Further Boundary Problems	81

3—Discrete Linear Problems

3.1.	Problems Linear in the Parameter	83
3.2.	Reduction to Canonical Form	85
3.3.	The Real Axis Case	87
3.4.	The Unit Circle Case	89
3.5.	The Real 2-by-2 Case	90
3.6.	The 2-by-2 Unit Circle Case	92
3.7.	The Boundary Problem on the Real Axis	94
3.8.	The Boundary Problem on the Unit Circle	96

4—Finite Orthogonal Polynomials

4.1.	The Recurrence Relation	97
4.2.	Lagrange-Type Identities.	98
4.3.	Oscillatory Properties	100
4.4.	Orthogonality	104
4.5.	Spectral and Characteristic Functions	106
4.6.	The First Inverse Spectral Problem	107
4.7.	The Second Inverse Spectral Problem	111
4.8.	Spectral Functions in General.	114
4.9.	Some Continuous Spectral Functions	117

**5—Orthogonal Polynomials
The Infinite Case**

5.1.	Limiting Boundary Problems	119
5.2.	Spectral Functions	120
5.3.	Orthogonality and Expansion Theorem	123
5.4.	Nesting Circle Analysis	125
5.5.	Limiting Spectral Functions	129
5.6.	Solutions of Summable Square	130
5.7.	Eigenvalues in the Limit-Circle Case	132
5.8.	Limit-Circle, Limit-Point Tests	134
5.9.	Moment Problem	136
5.10.	The Dual Expansion Theorem	138

6—Matrix Methods for Polynomials

6.1.	Orthogonal Polynomials as Jacobi Determinants	142
6.2.	Expansion Theorems, Periodic Boundary Conditions.	144
6.3.	Another Method for Separation Theorems	145

6.4.	The Green's Function	148
6.5.	A Reactance Theorem	150
6.6.	Polynomials with Matrix Coefficients	150
6.7.	Oscillatory Properties	152
6.8.	Orthogonality	157
6.9.	Polynomials in Several Variables	160
6.10.	The Multi-Parameter Oscillation Theorem	162
6.11.	Multi-Dimensional Orthogonality	169

7—Polynomials Orthogonal on the Unit Circle

7.1.	The Recurrence Relation	170
7.2.	The Boundary Problem	172
7.3.	Orthogonality	173
7.4.	The Recurrence Formulas Deduced from the Orthogonality	178
7.5.	Uniqueness of the Spectral Function	182
7.6.	The Characteristic Function	184
7.7.	A Further Orthogonality Result	188
7.8.	Asymptotic Behavior	190
7.9.	Polynomials Orthogonal on a Real Segment	196
7.10.	Continuous and Discrete Analogs	199

8—Sturm-Liouville Theory

8.1.	The Differential Equation	202
8.2.	Existence, Uniqueness, and Bounds for Solutions	205
8.3.	The Boundary Problem	207
8.4.	Oscillatory Properties	209
8.5.	An Interpolatory Property	217
8.6.	The Eigenfunction Expansion	222
8.7.	Second-Order Equation with Discontinuities	226
8.8.	The Green's Function	229
8.9.	Convergence of the Eigenfunction Expansion	232
8.10.	Spectral Functions	238
8.11.	Explicit Expansion Theorem	240
8.12.	Expansions over a Half-Axis	243
8.13.	Nesting Circles	247

9—The General First-Order Differential System

9.1.	Formalities	252
9.2.	The Boundary Problem	255
9.3.	Eigenfunctions and Orthogonality	258
9.4.	The Inhomogeneous Problem.	262

9.5.	The Characteristic Function	268
9.6.	The Eigenfunction Expansion	273
9.7.	Convergence of the Eigenfunction Expansion	280
9.8.	Nesting Circles	284
9.9.	Expansion of the Basic Interval	289
9.10.	Limit-Circle Theory	292
9.11.	Solutions of Integrable Square	293
9.12.	The Limiting Process $a \rightarrow -\infty, b \rightarrow +\infty$	298

10—Matrix Oscillation Theory

10.1.	Introduction	300
10.2.	The Matrix Sturm-Liouville Equation	303
10.3.	Separation Theorem for Conjugate Points	308
10.4.	Estimates of Oscillation	312
10.5.	Boundary Problems with a Parameter	317
10.6.	A Fourth-Order Scalar Equation	323
10.7.	The First-Order Equation	328
10.8.	Conjugate Point Problems	332
10.9.	First-Order Equation with Parameter	336

**11—From Differential to
Integral Equations**

11.1.	The Sturm-Liouville Case	339
11.2.	Uniqueness and Existence of Solutions	341
11.3.	Wronskian Identities	348
11.4.	Variation of Parameters	350
11.5.	Analytic Dependence on a Parameter	355
11.6.	Eigenvalues and Orthogonality	356
11.7.	Remarks on the Expansion Theorem	358
11.8.	The Generalized First-Order Matrix Differential Equation	359
11.9.	A Special Case	363
11.10.	The Boundary Problem	364

**12—Asymptotic Theory of
Some Integral Equations**

12.1.	Asymptotically Trigonometric Behavior	366
12.2.	The S -Function	371
12.3.	A Non-Self-Adjoint Problem	375
12.4.	The Sturm-Liouville Problem.	381
12.5.	Asymptotic Properties for the Generalization of $y'' + [k^2 + g(x)]y = 0$	384

12.6.	Solutions of Integrable Square	391
12.7.	Analytic Aspects of Asymptotic Theory	393
12.8.	Approximations over a Finite Interval	398
12.9.	Approximation to the Eigenfunctions	408
12.10.	Completeness of the Eigenfunctions	411

Appendix I. Some Compactness Principles for Stieltjes Integrals

I.1.	Functions of Bounded Variation	416
I.2.	The Riemann-Stieltjes Integral	418
I.3.	A Convergence Theorem.	423
I.4.	The Helly-Bray Theorem	425
I.5.	Infinite Interval and Bounded Integrand	426
I.6.	Infinite Interval with Polynomial Integrand	428
I.7.	A Periodic Case	430
I.8.	The Matrix Extension	431
I.9.	The Multi-Dimensional Case	434

Appendix II. Functions of Negative Imaginary Type

II.1.	Introduction	436
II.2.	The Rational Case	437
II.3.	Separation Property in the Meromorphic Case	439

Appendix III. Orthogonality of Vectors

III.1.	The Finite-Dimensional Case	441
III.2.	The Infinite-Dimensional Case	442

Appendix IV. Some Stability Results for Linear Systems

IV.1.	A Discrete Case	447
IV.2.	The Case of a Differential Equation	449
IV.3.	A Second-Order Differential Equation	450
IV.4.	The Mixed or Continuous-Discrete Case	452
IV.5.	The Extended Gronwall Lemma	455

Appendix V. Eigenvalues of Varying Matrices

V.1. Variational Expressions for Eigenvalues 457

V.2. Continuity and Monotonicity of Eigenvalues 459

V.3. A Further Monotonicity Criterion 461

V.4. Varying Unitary Matrices 464

V.5. Continuation of the Eigenvalues 465

V.6. Monotonicity of the Unit Circle 468

Appendix VI. Perturbation of Bases in Hilbert Space

VI.1. The Basic Result 471

VI.2. Continuous Variation of a Basis. 473

VI.3. Another Result 475

NOTATION AND TERMINOLOGY 476

LIST OF BOOKS AND MONOGRAPHS 478

NOTES: Section 0.1, Section 0.2, Section 0.4, Section 0.7, Section 0.8, Section 1.5, Section 1.6, Sections 1.7-8, Section 1.10, Section 2.2, Section 2.3, Section 2.5, Section 2.7, Section 2.10, Section 3.1, Section 3.2, Section 3.3, Section 3.5, Chapter 4, Section 4.2, Section 4.3, Section 4.4, Section 4.5, Section 4.7, Chapter 4, Problems, Section 5.1, Section 5.2, Section 5.4, Section 5.7, Section 5.8, Section 5.9, Section 5.10, Section 6.1, Section 6.4, Section 6.5, Section 6.6, Sections 6.9-10, Section 7.1, Section 7.5, Section 7.6, Section 7.7, Sections 7.8-9, Section 7.10, Section 8.1, Section 8.3, Section 8.4, Section 8.5, Section 8.6, Section 8.7, Section 8.10, Section 8.13, Section 9.1, Section 9.4, Section 9.11, Section 10.1, Section 10.2, Section 10.3, Section 10.4, Section 10.6, Sections 10.8-9, Section 11.1, Section 11.2, Section 11.8, Chapter 11, Problems, Section 12.1, Section 12.3, Section 12.4, Section 12.5, Section 12.6, Section 12.7, Section 12.10, Appendix I, Appendix II, Appendix IV, Appendix V, and Appendix VI 481
