<i>Preface</i>	ix
 PART I ALGEBRAIC PROPERTIES	
Chapter 1 Introduction	3
A. The Taylor Series Problem	3
B. Padé Approximants	4
C. Solution for the Padé Approximants	8
D. The Padé Table	9
E. An Application of Padé Approximants to Physics	10
 Chapter 2 The Structure of the Padé Table	 13
A. The C Table	13
B. Block Structure of the Padé Table	19
C. Existence of Infinitely Many Padé Approximants	24
 Chapter 3 Identities	 26
A. Two-Term Identities	26
B. Cross Ratios	28
C. Three-Term Identities	30
D. Five-Term Identities	33
E. Three-Term Identity Coefficients from Padé Coefficients	34
F. Compact Expressions for Padé Approximants	36
G. Connection between Padé Tables of $f(x)$ and $(1 + \alpha x)f(x)$	38

Chapter 4	Relation between Padé Approximants and Continued Fractions	42
A.	Fundamental Recursion Formulas	42
B.	Equivalence Transformations	44
C.	Convergence Theorems	47
D.	Relation of Continued Fractions to Taylor Series	55
E.	Relation of Continued Fractions to Padé Approximants	57
F.	Bigradients	58
Chapter 5	Gauss's Hypergeometric Function	62
A.	Gauss's Continued Fraction	62
B.	Special Cases	64
C.	Confluent Hypergeometric Function	68
D.	Bessel Functions	70
E.	Divergent Series Derived by Confluence	71
Chapter 6	Recursion Relations	74
A.	Classification of Problems	74
B.	The Value Problem	75
C.	The Coefficient Problem	77
D.	The Root Problem	80
Chapter 7	Relation between Orthogonal Polynomials and Padé Approximants	85
A.	Orthogonality Properties of Padé Denominators	85
B.	Examples from the Classical Orthogonal Polynomial Systems	87
C.	Extremal Properties	89
D.	Decomposition of the Quadratic Form into a Sum of Squares	90
E.	The Eigenvalue Distribution for the Quadratic Form	93
Chapter 8	The N-Point Padé Approximant	100
A.	General Padé Fitting Problem	100
B.	Determinantal Solution	103
C.	Thiele's Reciprocal Difference Method	105
D.	An Orthogonality Property	106
E.	The N th Root Fitting Problem	107
F.	Acceleration of the Convergence of a Sequence	108

Chapter 9 Invariance Properties	110
A. Argument Transformations	110
B. Value Transformations	112
C. The Riemann Sphere	113
 PART II CONVERGENCE THEORY	
Chapter 10 Numerical Examples	121
A. Regular Points	121
B. Singular Points	123
C. Asymptotic Series	127
D. The Location of Cuts	128
E. Noisy Series	131
Chapter 11 Convergence of Vertical and Horizontal Sequences	133
A. Convergence on the Sphere	133
B. Functions with Only Polar Singularities	134
C. Functions with Polar Singularities and “Smooth” Nonpolar Singularity	143
D. Several “Smooth” Boundary Circle Singularities	147
E. “Smooth” Entire Functions	149
F. Nonvertical Sequences	154
G. General Entire Functions	155
H. The N -Point Padé Approximants	160
Chapter 12 Convergence of General Sequences	166
A. Continuity on the Sphere	166
B. Convergence Uniqueness Theorem	170
C. Convergence of General Sequences	173
Chapter 13 The Distribution of Poles and Zeros	186
A. The Baker–Gammel–Wills Conjecture	188
B. Extensions of the Conjectures	188
Chapter 14 Convergence in Hausdorff Measure	193
A. Hausdorff Measure	193

B. Error Formula	195
C. Convergence Theorems	197
D. Convergence in the Mean on the Riemann Sphere	203
E. Examples	204

PART III SERIES OF STIELTJES AND PÓLYA

Chapter 15 Series of Stieltjes, Inequalities	209
---	------------

A. Series of Stieltjes	209
B. Inequalities	213

Chapter 16 Series of Stieltjes, Convergence	218
--	------------

A. Existence of a Limit	218
B. Uniqueness of the Limit	219
C. Stieltjes Integral Representation	229
D. The Hamburger Problem	230

Chapter 17 Series of Stieltjes, Inclusion Regions	234
--	------------

A. Nonzero Radius of Convergence	234
B. The N -Point Problem	244
C. The Hamburger Problem	246
D. Tschebycheff's Inequalities	248

Chapter 18 Pólya Frequency Series	252
--	------------

A. Characterization of Pólya Frequency Series	253
B. Convergence Properties	255

PART IV GENERALIZATIONS AND APPLICATIONS

Chapter 19 Generalized Padé Approximants	263
---	------------

Chapter 20 Series with Infinite Coefficients	267
---	------------

Chapter 21 Matrix Padé Approximants	270
--	------------

CONTENTS	ix
Chapter 22 Critical Phenomena	274
Chapter 23 Scattering Physics	280
Chapter 24 Electrical Circuits and Several Other Applications	288
REFERENCES	295
<i>Index</i>	303
