

Contents

Preface ix

Chapter I Introduction

1-1. Curve Fitting 1 1-2. Model Fitting 2 1-3. Estimation 3
1-4. Linearity 5 1-5. Point and Interval Estimation 6 1-6. Historical Back-
ground 6 1-7. Notation 7

Chapter II Problem Formulation

A DETERMINISTIC MODELS

2-1. Basic Concepts 11 2-2. Structural Model 12 2-3. Parameter Evaluation 13
2-4. Reduced Model 13 2-5. Application Areas 14

B DATA

2-6. Experiments and Data Matrix 17

C PROBABILISTIC MODELS AND LIKELIHOOD

2-7. Randomness in Data 18 2-8. The Normal Distribution 18
2-9. The Uniform Distribution 21 2-10. Distribution of Errors 22
2-11. Stochastic Form of the Model 24 2-12. Likelihood–Standard Reduced
Model 26 2-13. Likelihood–Structural Models 27 2-14. An Example 29
2-15. Utility of Distribution Assumptions 32

D PRIOR INFORMATION AND POSTERIOR DISTRIBUTION

2-16. Prior Information 32 2-17. Prior Distribution 33 2-18. Informative
and Noninformative Priors 34 2-19. Bayes' Theorem 36 2-20. Problems 37

Chapter III Estimators and Their Properties

A STATISTICAL PROPERTIES

3-1. The Sampling Distribution 39 3-2. Properties of the Sampling Distribution 40
3-3. Evaluation of Statistical Properties 45

B MATHEMATICAL PROPERTIES

- 3-4. Optimization 47 3-5. Unconstrained Optimization 48 3-6. Equality Constraints 49 3-7. Inequality Constraints 51 3-8. Problems 53

Chapter IV Methods of Estimation

- 4-1. Residuals 54

A LEAST SQUARES

- 4-2. Unweighted Least Squares 55 4-3. Weighted Least Squares 56
4-4. Multiple Linear Regression 58

B MAXIMUM LIKELIHOOD

- 4-5. Definition 61 4-6. Likelihood Equations 62 4-7. Normal Distribution 63
4-8. Unknown Diagonal Covariance 64 4-9. Unknown General Covariance 65
4-10. Independent Variables Subject to Error 67 4-11. Exact Structural Models 68
4-12. Data Requirements 69 4-13. Some Other Distributions 70

C BAYESIAN ESTIMATION

- 4-14. Definition 72 4-15. Mode of the Posterior Distribution 73
4-16. Minimum Risk Estimates 74

D OTHER METHODS

- 4-17. Minimax Deviation 77 4-18. Pseudomaximum Likelihood 78
4-19. Linearizing Transformations 78 4-20. Minimum Chi-Square Method 80
4-21. Problems 80

Chapter V Computation of the Estimates I: Unconstrained Problems

- 5-1. Introduction 83 5-2. Iterative Scheme 84 5-3. Acceptability 85
5-4. Convergence 87 5-5. Steepest Descent 88 5-6. Newton's Method 88
5-7. Directional Discrimination 91 5-8. The Marquardt Method 94 5-9. The Gauss Method 96
5-10. The Gauss Method as a Sequence of Linear Regression Problems 99
5-11. The Implementation of the Gauss Method 101
5-12. Variable Metric Methods 106 5-13. Step Size 110 5-14. Interpolation-Extrapolation 111
5-15. Termination 114 5-16. Remarks on Convergence 115
5-17. Derivative Free Methods 117 5-18. Finite Differences 117
5-19. Direct Search Methods 119 5-20. The Initial Guess 120 5-21. A Single-Equation Least Squares Problem 123
5-22. Adding Prior Information 131
5-23. A Two-Equation Maximum Likelihood Problem 133 5-24. Problems 139

Chapter VI Computation of the Estimates II: Problems with Constraints

A INEQUALITY CONSTRAINTS

- 6-1. Penalty Functions 141 6-2. Projection Methods 146 6-3. Projection with Bounded Parameters 151
6-4. Transformation of Variables 153
6-5. Minimax Problems 154

B EQUALITY CONSTRAINTS

- 6-6. Exact Structural Models 154 6-7. Convergence Monitoring 156
 6-8. Some Special Cases 157 6-9. Penalty Functions 159 6-10. Linear
 Equality Constraints 160 6-11. Least Squares Problem with Penalty Functions 160
 6-12. Least Squares Problem—Projection Method 162 6-13. Independent Variables
 Subject to Error 163 6-14. An Implicit Equations Model 167
 6-15. Problems 168

Chapter VII Interpretation of the Estimates

- 7-1. Introduction 170 7-2. Response Surface Techniques 171 7-3. Canonical
 Form 174 7-4. The Sampling Distribution 175 7-5. The Covariance Matrix
 of the Estimates 176 7-6. Exact Structural Model 179 7-7. Constraints 180
 7-8. Principal Components 183 7-9. Confidence Intervals 184
 7-10. Confidence Regions 187 7-11. Linearization 189 7-12. The Posterior
 Distribution 191 7-13. The Residuals 192 7-14. The Independent Variables
 Subject to Error 196 7-15. Goodness of Fit 198 7-16. Tests on Residuals 199
 7-17. Runs and Outliers 201 7-18. Causes of Failure 202 7-19. Prediction 204
 7-20. Parameter Transformation 205 7-21. Single-Equation Least Squares
 Problem 206 7-22. A Monte Carlo Study 210 7-23. Independent Variables
 Subject to Error 212 7-24. Two-Equation Maximum Likelihood Problem 213
 7-25. Problems 216

Chapter VIII Dynamic Models

- 8-1. Models Involving Differential Equations 218 8-2. The Standard Dynamic
 Model 221 8-3. Models Reducible to Standard Form 223 8-4. Computation
 of the Objective Function and Its Gradient 225 8-5. Numerical Integration 230
 8-6. Some Difficulties Associated with Dynamic Systems 231 8-7. A Chemical
 Kinetics Problem 233 8-8. Linearly Dependent Equations 238
 8-9. Problems 242

Chapter IX Some Special Problems

- 9-1. Missing Observations 244 9-2. Inhomogeneous Covariance 246
 9-3. Sequential Reestimation 248 9-4. Computational Aspects 249
 9-5. Stochastic Approximation 251 9-6. A Missing Data Problem 251
 9-7. Further Problem with Missing Data 253 9-8. A Sequential Reestimation
 Problem 255 9-9. Problems 257

Chapter X Design of Experiments

- 10-1. Introduction 258 10-2. Information and Uncertainty 261 10-3. Design
 Criterion for Parameter Estimation 262 10-4. Design Criterion for Prediction 265

10-5. Design Criterion for Model Discrimination	266	10-6. Termination	
Criteria	269	10-7. Some Practical Considerations	271
10-8. Computational		10-9. Computer Simulated Experiments	276
Considerations	273	10-10. Design for Decision Making	283
10-10. Design for Decision Making	283	10-11. Problems	286

Appendix A Matrix Analysis

A-1. Matrix Algebra	287	A-2. Matrix Differentiation	293	A-3. Pivoting and Sweeping	296
A-4. Eigenvalues and Vectors of a Real Symmetric Matrix	302	A-5. Spectral Decompositions	303		

Appendix B	Probability	310
Appendix C	The Rao–Cramer Theorem	313
Appendix D	Generating a Sample from a Given Multivariate Normal Distribution	316
Appendix E	The Gauss–Markov Theorem	318
Appendix F	A Convergence Theorem for Gradient Methods	320
Appendix G	Some Estimation Programs	323
