PREFACE

vii

CHAPTER I: LINEAR ALGEBRAIC EQUATIONS

1.1	Introduction	1
1.2	Cramer's Solution	1
1.3	Gaussian Elimination	2
1.4	On the Evaluation of Determinants	3
1.5	A Basic Formula	5
1.6	Maximization	6
1.7	General Case	6
1.8	Green's Function	7
1.9	Imbedding	7
	Bibliography and Comments	10

CHAPTER II: FINDING THE SQUARE ROOT OF A POSITIVE DEFINITE MATRIX

2.1	Introduction	11
2.2	Use of the Canonical Representation	11
2.3	A Formula from Control Theory	12
2.4	Upper and Lower Bounds	12
2.5	Dynamic Programming	12
2.6	Discussion	13
2.7	Square Roots	13
2.8	Commutivity	13
2.9	Bounds	14
2.10	General Matrices	14
	Bibliography and Comments	14

CHAPTER III: LARGEST AND SMALLEST CHARACTERISTIC ROOTS

3.1	Introduction	15
3.2	Positive Definite Matrices	16
3.3	Better Bounds	16
3.4	Accuracy of Estimates	17
3.5	Associated Characteristic Vector	18
3.6	The Rayleigh Quotient	18
3.7	Symmetric Matrices	18
3.8	Application to Sturm-Liouville Equations	18
3.9	Application to Integral Equations	19
3.10	General Matrices	19
3.11	The Smallest Characteristic Root of a Sturm-Liouville Equation	19
3.12	The Equation Determining the Characteristic Values	23
3.13	Discussion	23
3.14	Analytic Preliminaries	24
3.15	Inequalities	25
3.16	Rate of Convergence	26
3.17	Example	27
3.18	Inequalities for $\prod_{i=1}^{R+1} \lambda_i$	28
3.19	The Equation $u'' + \lambda(1+t)u = 0$	29
3.20	Alternate Computational Scheme for Polynomial Coefficients	32
3.21	Extension to Higher Order Equations	33
3.22	The Rayleigh Quotient and Dynamic Programming	34
3.23	Dynamic Programming Approach	35
3.24	Computational Aspects	36
3.25	Nonlinear Characteristic Value Problems	37
3.26	Higher Characteristic Values	37
3.27	Matrix Theory	37
3.28	Selective Computation	38
3.29	On The Integral Equation $\lambda f(x) = \int_0^a K(x-y)f(y)dy$	38
3.30	First Proof	39
3.31	Second Proof	42
3.32	An Approximation Method for Small a	47
3.33	On the Non-Negativity of Green's Functions	48
3.34	Statement of Results	48
3.35	Discussion	49
3.36	Proof of Theorem	50
3.37	On An Iterative Procedure for Obtaining the Perron Root of a Positive Matrix	51
3.38	On The Second Greatest Characteristic Root Of A Positive Definite Matrix	52
3.39	Determination of λ_2	59
3.40	Determination of $\lambda_1 \lambda_2$	59
3.41	The Modified Kronecker Sum And Product	60
3.42	Characteristic Values	60
	Bibliography and Comments	60

CHAPTER IV: ON THE DETERMINATION OF CHARACTERISTIC VALUES FOR A CLASS OF STURM-LIOUVILLE PROBLEMS

4.1	Introduction	62
4.2	The Equation Determining The Characteristic Values	65
4.3	Discussion	66
4.4	Analytic Preliminaries	66
4.5	Inequalities	68
4.6	Rate of Convergence	69
4.7	Discussion	69
4.8	Inequalities for $\prod_{i=1}^{R+1} \lambda_i$	70
4.9	The Equation $u'' + \lambda(1+t)u = 0$	71
4.10	Alternate Computational Scheme for Polynomial Coefficients	74
4.11	Extension to Higher Order Equations	75

CHAPTER V: LINEAR DIFFERENTIAL EQUATIONS WITH CONSTANT COEFFICIENTS

5.1	Introduction	77
5.2	Standard Procedures	77
5.3	Use of the Powers of Two	78
5.4	The Determination of e^{As}	81
5.5	Another Method for Calculating the Matrix Exponential	81
5.6	A Result Concerning Stability Matrices	82
5.7	The Lyapunov Equation	82
5.8	The Inverse Matrix	83
5.9	The Inverse of a Stability Matrix	83
5.10	A Result of Ostrowski	84
5.11	Inverses	84
	Bibliography and Comments	85

CHAPTER VI: LINEAR DIFFERENTIAL EQUATIONS WITH VARIABLE COEFFICIENTS

6.1	Introduction	86
6.2	Periodic Matrices	87
6.3	A Nonsingular Matrix is an Exponential	87
6.4	The Determination of $P(t)$	88
6.5	A Perturbation Procedure	89
6.6	Asymptotic Behavior	90
6.7	Differential Quadrature and Long-Term Integration	90
6.8	Long-Term Integration	91
6.9	Differential Quadrature	92
6.10	$g(y)$ Linear	93
6.11	$g(y)$ Nonlinear	93
6.12	Partial Differential Equations	93
6.13	Use of the Laplace Transform	94
6.14	Finding a Particular Solution	94
	Bibliography and Comments	96

CHAPTER VII: NONLINEAR DIFFERENTIAL EQUATIONS

7.1	Introduction	97
7.2	Fundamental Semigroup Relation	98
7.3	Acceleration of Iteration and Powers of Two	98
7.4	Relative Invariants	98
7.5	An Alternate Approach	100
7.6	Relative Invariants in the Commensurable Case	101
7.7	Nonlinear Differential Equations	105
7.8	Stochastic Differential Equations	108
7.9	Relative Invariants	109
7.10	Burger's Equation	110
7.11	Carleman Linearization	111
7.12	Truncation	111
7.13	Discussion	111
7.14	Solutions Which Exist for all t	112
	Bibliography and Comments	113

CHAPTER VIII: ASYMPTOTIC BEHAVIOR

8.1	Introduction	115
8.2	Motivation of Method	116
8.3	Radiative Transfer	117
8.4	Time-Dependent Processes	121
8.5	Gradient Techniques	122
8.6	Asymptotic Behavior of Solutions to Initial Value Problems	122
8.7	A Representation of the Solution for Large t	124
8.8	Partial Differential Equations For A and Ψ	129
8.9	The Solution of (8.8.8)	130
8.10	Connection With The Results Of Franchetti	132
8.11	A Representation Of The Solution For Large t	134
8.12	A Partial Differential Equation For $B(x, \theta)$ And Its Solution	137
8.13	Some Remarks On More General Cases	138
8.14	The Poincaré - Lyapunov Theorem	139
8.15	The Determination of $f(c)$	140
8.16	The Asymptotic Behavior Of Other Solutions	141
8.17	Some Characteristic Roots With Positive Real Part	143
8.18	Some Characteristic Roots With Zero Real Part	143
8.19	An Important Functional Equation	143
	Bibliography and Comments	143

CHAPTER IX: PARTIAL DIFFERENTIAL EQUATIONS AND DYNAMIC PROGRAMMING

9.1	Introduction	145
9.2	Calculus Of Variations As A Multistage Decision Process	146
9.3	A New Formalism	148
9.4	Riccati Equations	150

9.5	Layered Functionals	150
9.6	Dynamic Programming Approach	151
9.7	Quadratic Case	153
9.8	Bounds	153
	Bibliography and Comments	154

CHAPTER X: PARTIAL DIFFERENTIAL EQUATIONS AND INVARIANT IMBEDDING

10.1	Introduction	155
10.2	On The Fundamental Equations of Invariant Imbedding	155
10.3	The Case $N = 2$	157
10.4	Integral Conditions	159
10.5	Mixed Conditions	160
10.6	Selective Computation	160
	Bibliography and Comments	161

CHAPTER XI: MAXIMUM ALTITUDE

11.1	Introduction	162
11.2	Vertical Motion - I	162
11.3	Vertical Motion - II	163
11.4	Computational Aspects	164
11.5	Maximum Altitude	165
11.6	Maximum Range	165
11.7	Maximum Penetration	165
	Bibliography and Comments	166

CHAPTER XII: SEMIGROUPS IN SPACE

12.1	Introduction	167
12.2	Imbedding in Time	168
12.3	Advantages and Disadvantages	168
12.4	Iteration	169
12.5	Imbedding in Space	170
12.6	Advantages and Disadvantages	171
12.7	An Imbedding in Structure	172
12.8	Associated Partial Differential Equation	173
12.9	Imbedding in Structure	174
12.10	Applications in Mathematical Physics	175
12.11	Application to Combinatorics	175
12.12	Discussion	176
	Bibliography and Comments	176

CHAPTER XIII: VARIATIONAL PROBLEMS AND FUNCTIONAL EQUATIONS

13.1	Introduction	177
13.2	Derivation of the Functional Equations	178
13.3	Some Generalizations	178
	Bibliography and Comments	179

CHAPTER XIV: ALLOCATION PROCESSES, LAGRANGE MULTIPLIERS AND THE MAXIMUM TRANSFORM

14.1	Introduction	180
14.2	Lagrange Multipliers	180
14.3	Successive Approximations	183
14.4	Application to the Calculus of Variations	183
14.5	Maximum Transform	184
14.6	Definitions	186
14.7	Analytic Properties of the Maximum Transform	190
14.8	Optimal Distribution of Effort	194
14.9	A Multistage Allocation Process	197
14.10	The General Transform T	198
14.11	Minimum and Multiplicative Convolution	204
14.12	Examples of Transforms	206
14.13	The Maximum Transform and Semigroups of Transformations	208
14.14	Solutions of the Functional Equation	210
14.15	Parametric Representation	210
	Bibliography and Comments	211

APPENDIX A

14.A.1	Introduction	212
14.A.2	Linear Systems of Algebraic Equations	212
14.A.3	Evaluation of a Polynomial	213
14.A.4	Evaluation of an Exponential	214
14.A.5	Discussion	214

APPENDIX B

14.B.1	Introduction	216
14.B.2	The Medians of an Isosceles Triangle	217
14.B.3	Discussion	219

SUBJECT INDEX	221
