

CONTENTS

| | |
|-----------------|-----|
| PREFACE | vii |
| ACKNOWLEDGMENTS | xi |

| | |
|---|-----|
| 1. Iterative Methods on Normed Linear Spaces | |
| 1.1 Introduction | 1 |
| 1.2 Contraction Mappings | 4 |
| 1.3 Differentiation on Normed Spaces | 15 |
| 1.4 Gradient Techniques | 27 |
| 1.5 Least Squares Approximation | 45 |
| 1.6 Two-Point Boundary Value Problems | 54 |
| 1.7 Further Remarks on Stability | 62 |
| 2. Constrained Optimization on E^n | |
| 2.1 Introduction | 67 |
| 2.2 Semicontinuity and Convexity | 68 |
| 2.3 A Penalty Argument | 78 |
| 2.4 The Kuhn–Tucker and Lagrange Multiplier Rules | 87 |
| 2.5 The Regularity Assumption | 98 |
| 2.6 Bibliographic Notes and Other Remarks | 105 |
| 3. Computational Techniques for Constrained Optimization on E^n | |
| 3.1 Introduction | 110 |
| 3.2 Implementation of the Penalty Argument | 111 |
| 3.3 A Conjugate Direction Method | 120 |
| 3.4 Gradient Projection | 132 |
| 3.5 Numerical Examples and One-Dimensional Minimization | 145 |
| 3.6 Bibliographic Notes and Remarks | 151 |
| 4. Constrained Optimization in Function Space | |
| 4.1 Introduction | 159 |
| 4.2 Problems of Optimal Control | 160 |
| 4.3 The Neyman–Pearson Multiplier Rule | 171 |

| | | |
|---|---|-----|
| 5. | Weak Convergence in Hilbert Space | |
| 5.1 | Introduction | 185 |
| 5.2 | Weak Convergence | 186 |
| 5.3 | Fixed Points of Nonexpansive Maps | 193 |
| 5.4 | The Penalty Argument in Hilbert Space | 199 |
| 5.5 | An Existence Question in Optimization | 201 |
| Appendix: Computer Program for the Solution of Two-Point Boundary Value Problems | | 204 |
| Bibliography | | 229 |
| AUTHOR INDEX | | 231 |
| SUBJECT INDEX | | 233 |
