

## Contents

<i>Chapter I. Introduction</i> . . . . .	1
§ 1. Generalities . . . . .	1
§ 2. Representation formulas with a kernel . . . . .	4
§ 3. The method of kernel expansion . . . . .	10
§ 4. Lidstone series . . . . .	13
§ 5. A set of Laguerre polynomials . . . . .	16
§ 6. Generalized Appell polynomials . . . . .	17
<i>Chapter II. Representation of entire functions</i> . . . . .	21
§ 7. General theory . . . . .	21
§ 8. Multiple expansions . . . . .	24
§ 9. Appell polynomials . . . . .	28
(i) Bernoulli polynomials and generalizations . . . . .	29
(ii) A set of Laguerre polynomials . . . . .	31
(iii) Hermite polynomials . . . . .	31
(iv) Reversed Laguerre polynomials . . . . .	32
(v) Reversed Rainville polynomials . . . . .	32
§ 10. Sheffer polynomials . . . . .	33
(vi) General difference polynomials . . . . .	34
(vii) Poisson-Charlier, Narumi and Boole polynomials . . . . .	37
(viii) Mittag-Leffler polynomials . . . . .	38
(ix) Abel interpolation series . . . . .	38
(x) Laguerre polynomials . . . . .	40
(xi) Angelescu polynomials . . . . .	41
(xii) Denisyuk polynomials . . . . .	41
(xiii) Squared Hermite polynomials . . . . .	41
(xiv) Adhoc polynomials . . . . .	41
(xv) Actuarial polynomials . . . . .	42
§ 11. More general polynomials . . . . .	42
(xvi) Special hypergeometric polynomials . . . . .	43
(xvii) Reversed Bessel polynomials . . . . .	43
(xviii) $q$ -difference polynomials . . . . .	44
(xix) Reversed Hermite polynomials . . . . .	45
(xx) Rainville polynomials . . . . .	46
§ 12. Polynomials not in generalized Appell form . . . . .	46
<i>Chapter III. Representation of functions that are regular at the origin</i> . . . . .	47
§ 13. Integral representations . . . . .	47
§ 14. Brenke polynomials . . . . .	51
(i) Polynomials generated by $A(w)(1-zw)^{-\lambda}$ . . . . .	52
(ii) $q$ -difference polynomials . . . . .	54
§ 15. More general polynomials . . . . .	55

§ 16. Polynomials generated by $A(w)(1 - zg(w))^{-\lambda}$ . . . . .	57
(iii) Taylor series . . . . .	57
(iv) Lerch polynomials . . . . .	57
(v) Gegenbauer polynomials . . . . .	58
(vi) Chebyshev polynomials . . . . .	58
(vii) Humbert polynomials . . . . .	58
(viii) Faber polynomials . . . . .	59
§ 17. Special hypergeometric polynomials . . . . .	60
(ix) Jacobi polynomials . . . . .	60
§ 18. Polynomials not in generalized Appell form . . . . .	61
<i>Chapter IV. Applications</i> . . . . .	65
§ 19. Uniqueness theorems . . . . .	65
§ 20. Functional equations . . . . .	67
<i>Bibliography</i> . . . . .	71
<i>Index</i> . . . . .	75
