

CONTENTS

	PREFACE	xi
CHAPTER 1	INTRODUCTION	1
	1-1 Transform Analysis	1
	1-2 Basic Fourier Transform Analysis	3
	1-3 The Ubiquitous Fourier Transform	7
	1-4 Digital Computer Fourier Analysis	7
	1-5 Historical Summary of the Fast Fourier Transform	8
CHAPTER 2	THE FOURIER TRANSFORM	11
	2-1 The Fourier Integral	11
	2-2 The Inverse Fourier Transform	13
	2-3 Existence of the Fourier Integral	15
	2-4 Alternate Fourier Transform Definitions	23
	2-5 Fourier Transform Pairs	28
CHAPTER 3	FOURIER TRANSFORM PROPERTIES	31
	3-1 Linearity	31
	3-2 Symmetry	32
	3-3 Time Scaling	32
	3-4 Frequency Scaling	35
	3-5 Time Shifting	37
		vii

	3-6	Frequency Shifting	37
	3-7	Alternate Inversion Formula	40
	3-8	Even Functions	40
	3-9	Odd Functions	41
	3-10	Waveform Decomposition	42
	3-11	Complex Time Functions	43
	3-12	Summary of Properties	46
CHAPTER 4		CONVOLUTION AND CORRELATION	50
	4-1	Convolution Integral	50
	4-2	Graphical Evaluation of the Convolution Integral	50
	4-3	Alternate Form of the Convolution Integral	54
	4-4	Convolution Involving Impulse Functions	57
	4-5	Convolution Theorem	58
	4-6	Frequency Convolution Theorem	61
	4-7	Proof of Parseval's Theorem	64
	4-8	Correlation	64
	4-9	Correlation Theorem	66
CHAPTER 5		FOURIER SERIES AND SAMPLED WAVEFORMS	75
	5-1	Fourier Series	75
	5-2	Fourier Series as a Special Case of the Fourier Integral	78
	5-3	Waveform Sampling	80
	5-4	Sampling Theorem	83
	5-5	Frequency Sampling Theorem	87
CHAPTER 6		THE DISCRETE FOURIER TRANSFORM	91
	6-1	A Graphical Development	91
	6-2	Theoretical Development	94
	6-3	Discrete Inverse Fourier Transform	98
	6-4	Relationship Between the Discrete and Continuous Fourier Transform	99
CHAPTER 7		DISCRETE CONVOLUTION AND CORRELATION	110
	7-1	Discrete Convolution	110
	7-2	Graphical Discrete Convolution	111
	7-3	Relationship Between Discrete and Continuous Convolution	113
	7-4	Discrete Convolution Theorem	118
	7-5	Discrete Correlation	119
	7-6	Graphical Discrete Correlation	119

CHAPTER 8	DISCRETE FOURIER TRANSFORM PROPERTIES	123
	8-1 Linearity	123
	8-2 Symmetry	123
	8-3 Time Shifting	124
	8-4 Frequency Shifting	124
	8-5 Alternate Inversion Formula	124
	8-6 Even Functions	125
	8-7 Odd Functions	126
	8-8 Waveform Decomposition	126
	8-9 Complex Time Functions	127
	8-10 Frequency Convolution Theorem	127
	8-11 Discrete Correlation Theorem	128
	8-12 Parseval's Theorem	130
	8-13 Summary of Properties	130
CHAPTER 9	APPLYING THE DISCRETE FOURIER TRANSFORM	132
	9-1 Fourier Transforms	132
	9-2 Inverse Fourier Transform Approximation	135
	9-3 Fourier Series Harmonic Analysis	137
	9-4 Fourier Series Harmonic Synthesis	140
	9-5 Leakage Reduction	140
CHAPTER 10	THE FAST FOURIER TRANSFORM (FFT)	148
	10-1 Matrix Formulation	148
	10-2 Intuitive Development	149
	10-3 Signal Flow Graph	153
	10-4 Dual Nodes	154
	10-5 W^p Determination	156
	10-6 Unscrambling the FFT	158
	10-7 FFT Computation Flow Chart	160
	10-8 FFT FORTRAN Program	163
	10-9 FFT ALGOL Program	163
	10-10 FFT Algorithms for Real Data	163
CHAPTER 11	THEORETICAL DEVELOPMENT OF THE BASE 2 FFT ALGORITHM	172
	11-1 Definition of Notation	172
	11-2 Factorization of W^p	173
	11-3 Derivation of the Cooley-Tukey Algorithm for $N = 2^p$	176
	11-4 Canonic Forms of the FFT	177

CHAPTER 12	FFT ALGORITHMS FOR ARBITRARY FACTORS	184
12-1	FFT Algorithm for $N = r_1 r_2$	184
12-2	Cooley-Tukey Algorithm for $N = r_1 r_2 \dots r_m$	188
12-3	Sande-Tukey Algorithm for $N = r_1 r_2 \dots r_m$	190
12-4	Twiddle Factor FFT Algorithms	191
12-5	Computations Required by Base 2, Base 4, Base 8, and Base 16 Algorithms	193
12-6	Summary of FFT Algorithms	195
CHAPTER 13	FFT CONVOLUTION AND CORRELATION	198
13-1	FFT Convolution of Finite Duration Waveforms	199
13-2	FFT Correlation of Finite Duration Waveforms	202
13-3	FFT Convolution of an Infinite and a Finite Duration Waveform	206
13-4	Efficient FFT Convolution	217
13-5	Applications Summary	221
APPENDIX A	THE IMPULSE FUNCTION: A DISTRIBUTION	224
A-1	Impulse Function Definitions	224
A-2	Distribution Concepts	226
A-3	Properties of Impulse Functions	228
BIBLIOGRAPHY		231
INDEX		247
