PREFACE

vii

1

Singular Partial Differential Equations of EPD Type

1.1. Examples	1
1.2. Mean values in \mathbb{R}^n	5
1.3. The Fourier method	8
1.4. Connection formulas and properties of solutions for EPD equations in D' and S'	29
1.5. Spectral techniques and energy methods in Hilbert space	43
1.6. EPD equations in general spaces	66
1.7. Transmutation	80

2

Canonical Sequences of Singular Cauchy Problems

2.1. The rank one situation	89
2.2. Resolvants	96
2.3. Examples with $m_{2\alpha} = 0$	101
2.4. Expressions for general resolvants	130
2.5. The Euclidean case plus generalizations	136

CONTENTS

3

Degenerate Equations with Operator Coefficients

3.1. Introduction	143
3.2. The Cauchy problem by spectral techniques	147
3.3. Strongly regular equations	166
3.4. Weakly regular equations	179
3.5. Linear degenerate equations	187
3.6. Semilinear degenerate equations	206
3.7. Doubly nonlinear equations	229

4

Selected Topics

4.1. Introduction	237
4.2. Huygens' principle	237
4.3. The generalized radiation problem of Weinstein	245
4.4. Improperly posed problems	251
4.5. Miscellaneous problems	264
REFERENCES	275
INDEX	329
