Preface	III/V
<i>Chapter I. The concept of stability and systems with constant coefficients</i>	1
§ 1. Some remarks on the concept of stability	1
1.1. Existence, uniqueness, continuity, p. 1. — 1.2. Stability in the sense of LYAPUNOV, p. 4. — 1.3. Examples, p. 6. — 1.4. Boundedness, p. 7. — 1.5. Other types of requirements and comments, p. 8. — 1.6. Stability of equilibrium, p. 9. — 1.7. Variational systems, p. 10. — 1.8. Orbital stability, p. 12. — 1.9. Stability and change of coordinates, p. 12. — 1.10. Stability of the m -th order in the sense of G. D. BIRKHOFF, p. 13. — 1.11. A general remark and bibliographical notes, p. 14.	1
§ 2. Linear systems with constant coefficients	14
2.1. Matrix notations, p. 14. — 2.2. First applications to differential systems, p. 18. — 2.3. Systems with constant coefficients, p. 19. — 2.4. The ROUTH-HURWITZ and other criteria, p. 21. — 2.5. Systems of order 2, p. 24. — 2.6. Nonhomogeneous systems, p. 26. — 2.7. Linear resonance, p. 27. — 2.8. Servomechanisms, p. 28. — 2.9. Bibliographical notes, p. 33.	14
<i>Chapter II. General linear systems</i>	34
§ 3. Linear systems with variable coefficients	34
3.1. A theorem of LYAPUNOV, p. 34. — 3.2. A proof of (3.1.i), p. 35. — 3.3. Boundedness of the solutions, p. 36. — 3.4. Further conditions for boundedness, p. 37. — 3.5. The reduction to L -diagonal form and an outline of the proofs of (3.4. iii) and (3.4. iv), p. 39. — 3.6. Other conditions, p. 41. — 3.7. Asymptotic behavior, p. 41. — 3.8. Linear asymptotic equilibrium, p. 42. — 3.9. Systems with variable coefficients, p. 44. — 3.10. Matrix conditions, p. 48. — 3.11. Nonhomogeneous systems, p. 49. — 3.12. LYAPUNOV's type numbers, p. 50. — 3.13. First application of type numbers to differential equations, p. 51. — 3.14. Normal systems of solutions, p. 52. — 3.15. Regular differential systems, p. 53. — 3.16. A relation between type numbers and generalized characteristic roots, p. 54. — 3.17. Bibliographical notes, p. 55.	34
§ 4. Linear systems with periodic coefficients	55
4.1. Floquet theory, p. 55. — 4.2. Some important applications, p. 59. — 4.3. Further results concerning equation (4.2.1) and extensions, p. 61. — 4.4. Mathieu equation, p. 65. — 4.5 Small periodic perturbations, p. 66. — 4.6. Bibliographical notes, p. 79.	55
§ 5. The second order linear differential equation and generalizations . . .	80
5.1. Oscillatory and non-oscillatory solutions, p. 80. — 5.2. FUBINI's theorems, p. 81. — 5.3. Some transformations, p. 84. — 5.4. BELLMAN's and PRODI's theorems, p. 84. — 5.5. The case $f(t) \rightarrow +\infty$, p. 85. —	80

5.6. Solutions of class L^2 , p. 86. — 5.7. Parseval relation for functions of class L^2 , p. 88. — 5.8. Some properties of the spectrum S , p. 89. — 5.9. Bibliographical notes, p. 89.	
<i>Chapter III. Nonlinear systems</i>	91
§ 6. Some basic theorems on nonlinear systems and the first method of LYAPUNOV	91
6.1. General considerations, p. 91. — 6.2. A theorem of existence and uniqueness, p. 91. — 6.3. Periodic solutions of periodic systems, p. 96. — 6.4. Periodic solutions of autonomous systems, p. 98. — 6.5. A method of successive approximations and the first method of LYAPUNOV, p. 99. — 6.6. Some results of BYLOV and VINOGRAD, p. 101. — 6.7. The theorems of BELLMAN, p. 102. — 6.8. Invariant measure, p. 103. — 6.9. Differential equations on a torus, p. 106. — 6.10. Bibliographical notes, p. 107.	
§ 7. The second method of LYAPUNOV	107
7.1. The function V of LYAPUNOV, p. 107. — 7.2. The theorems of LYAPUNOV, p. 109. — 7.3. More recent results, p. 111. — 7.4. A particular partial differential equations, p. 113. — 7.5. Autonomous systems, p. 114. — 7.6. Bibliographical notes, p. 114.	
§ 8. Analytical methods	115
8.1. Introductory considerations, p. 115. — 8.2. Method of LINDSTEDT, p. 116. — 8.3. Method of POINCARÉ, p. 118. — 8.4. Method of KRYLOV and BOGOLYUBOV, and of VAN DER POL, p. 120. — 8.5. A convergent method for periodic solutions and existence theorems, p. 123. — 8.6. The perturbation method, p. 136. — 8.7. The Liénard equation and its periodic solutions, p. 139. — 8.8. An oscillation theorem for equation (8.7.1), p. 143. — 8.9. Existence of a periodic solution of equation (8.7.1.), p. 145. — 8.10. Nonlinear free oscillations, p. 145. — 8.11. Invariant surfaces, p. 148. — 8.12. Bibliographical notes, p. 150. — 8.13. Nonlinear resonance, p. 150. — 8.14. Prime movers, p. 151. — 8.15. Relaxation oscillations, p. 155.	
§ 9. Analytic-topological methods	156
9.1. Poincaré theory of the critical points, p. 156. — 9.2. Poincaré-Bendixson theory, p. 163. — 9.3. Indices, p. 167. — 9.4. A configuration concerning LIÉNARD's equation, p. 170. — 9.5. Another existence theorem for the Liénard equation, p. 174. — 9.6. The method of the fixed point, p. 176. — 9.7. The method of M. L. CARTWRIGHT, p. 177. — 9.8. The method of T. WAZIEWSKI, p. 179.	
<i>Chapter IV. Asymptotic developments</i>	182
§ 10. Asymptotic developments in general	182
10.1. POINCARÉ's concept of asymptotic development, p. 182. — 10.2. Ordinary, regular and irregular singular points, p. 184. — 10.3. Asymptotic expansions for an irregular singular point of finite type, p. 186. — 10.4. Asymptotic developments deduced from Taylor expansions, p. 187. — 10.5. Equations containing a large parameter, p. 189. — 10.6. Turning points and the theory of R. E. LANGER, p. 192. — 10.7. Singular perturbation, p. 195.
