

# Contents

Preface	ix
Outline	xi
<b>CHAPTER I</b>	<b>3</b>
<b>SETTING THE STAGE</b>	
1. Physical Equations	3
2. Attractors	5
3. Finite and Infinite Space Systems	8
4. Evolution Equations for Infinite Systems, Constraints	11
5. Model Equations	13
6. Fronts	14
<b>CHAPTER II</b>	<b>17</b>
<b>SMALL SOLUTIONS</b>	
7. Invariant Manifolds	17
8. Perturbation Theory	22
9. Stable Manifolds (Unbounded Case)	24
<b>CHAPTER III</b>	<b>31</b>
<b>BIFURCATION THEORY</b>	
10. The Persistence of Point Attractors	31
11. Bifurcation from a Point Attractor	35
12. Normal Forms	44
12.1. Resonances	46
13. Flows and Maps	48
13.1. Poincaré Sections	48
14. Bifurcation from a Simple Eigenvalue	51
14.1. The 1-Dimensional Case	51
14.2. The $n$ -Dimensional Case	54
14.3. The Infinite-Dimensional Case	54
<b>CHAPTER IV</b>	<b>59</b>
<b>STATIONARY AND QUASISTATIONARY</b>	
<b>SOLUTIONS</b>	
15. Introduction	59
16. Linear Stability Analysis	63
16.1. Definition of Stability	64

16.2. Moving Frames	67
16.3. Some Examples	68
17. Existence of Stationary Solutions	72
17.1. The Nonlinear Heat Equation	72
17.2. The SH Equation (Perturbation Theory and Statement of Results)	73
17.3. The SH Equation (Existence Proof)	77
17.4. Convective Stationary Solutions	81
17.5. Convective Bifurcation (Second Example)	87
18. The General Case	88
 CHAPTER V	91
CONSEQUENCES OF THE LINEAR	
INSTABILITY OF STATIONARY	
SOLUTIONS	
19. Linearized Equations	92
19.1. Perturbing Stationary Solutions of the SH Equation	92
19.2. Perturbation Theory	95
20. Linear Stability Analysis for Stationary Solutions	99
20.1. Perturbation Theory	102
20.2. Proof of Theorem 20.2	104
20.3. Stability Analysis of Bifurcated Periodic Solutions	111
21. Bifurcation in Half-Spaces	115
21.1. Formulation of the Problem	116
21.2. The Linear Problem	117
21.3. The Nonlinear Problem	118
21.4. Counting the Solutions	121
 CHAPTER VI	127
MULTISCALE ANALYSIS	
22. Rescaling	127
23. Multiscale Analysis with Continuous Spectrum	128
 CHAPTER VII	133
FRONTS	
24. Hamiltonian Formalism for Second Order Equations	134
24.1. The Real Amplitude Equation	135
24.2. The Complex Amplitude Equation	138
25. The Maximum Principle and Comparison Theorems	142
25.1. Some Applications	145
26. The Stability Analysis for Fronts	152

## CONTENTS

vii

27. Differential Operators. Nullspaces and Inverses	155
27.1. Nullspaces	155
27.2. Bounds on the Inverse	156
27.3. Nullspaces and Inverses for Higher Order Operators	160
27.4. Coupled Systems	164
27.5. The Number of Solutions	166
28. Fronts for the Swift-Hohenberg Equation	167
28.1. Analysis of the Solution Ahead of the Front	173
28.2. Analysis in the Bulk	176
28.3. Connecting the Bulk and the Front	180
Outlook	183
Notation	187
Glossary	189
References	191
Analytical Index	195
