*Preface*   vii

*Introduction*   ix

<b>1. Number Systems and Errors</b>	<b>I</b>
1.1 The Representation of Integers	1
1.2 The Representation of Fractions	4
1.3 Floating-point Arithmetic	7
1.4 Error Propagation; Significance Errors and Instability	10
1.5 Computational Methods for Error Estimation	15
1.6 Some Comments on Convergence of Sequences	17
1.7 Some Mathematical Preliminaries	21
<b>2. The Solution of Nonlinear Equations</b>	<b>27</b>
2.1 A Survey of Iterative Methods	28
2.2 FORTRAN Programs for Some Iterative Methods	35
2.3 Fixed-point Iteration	44
2.4 Convergence Acceleration for Fixed-point Iteration	50
2.5 Quadratic Convergence and Newton's Method	57
2.6 Polynomial Equations: Real Roots	66
2.7 Complex Roots and Muller's Method	74
2.8 Simultaneous Nonlinear Equations	84
<b>3. Matrices and Systems of Linear Equations</b>	<b>91</b>
3.1 Properties of Matrices	91
3.2 The Solution of Linear Systems by Elimination	110
3.3 The Pivoting Strategy	123
3.4 The Triangular Factorization and Calculation of the Inverse	127
*3.5 Compact Schemes	137
3.6 Error and Residual of an Approximate Solution; Norms	142
3.7 The Condition Number and Iterative Improvement	150
3.8 Iterative Methods	157
3.9 Eigenvalues and the Convergence of Fixed-point Iteration	170
3.10 Determinants	180
3.11 The Eigenvalue Problem	184

<b>4. Interpolation and Approximation</b>	<b>191</b>
4.1 The Interpolating Polynomial: Lagrange Form	191
4.2 The Interpolating Polynomial: Newton Form	195
4.3 The Divided-difference Table	201
4.4 The Error of the Interpolating Polynomial	210
4.5 Interpolation in a Function Table Based on Equally Spaced Points	213
4.6 The Divided Difference as a Function of Its Arguments and Osculatory Interpolation	221
4.7 The Case for Piecewise-polynomial Interpolation	230
*4.8 Piecewise-cubic Interpolation	233
4.9 Data Fitting	241
*4.10 Orthogonal Polynomials	246
*4.11 Least-squares Approximation by Polynomials	255
*4.12 Chebyshev Economization	265
<b>5. Differentiation and Integration</b>	<b>274</b>
5.1 Numerical Differentiation	275
5.2 Numerical Integration: Some Basic Rules	284
5.3 Numerical Integration: Composite Rules	290
5.4 Numerical Integration: Gaussian Rules	299
5.5 Extrapolation to the Limit; Romberg Integration	307
<b>6. The Solution of Differential Equations</b>	<b>319</b>
6.1 Mathematical Preliminaries	320
6.2 Simple Difference Equations	322
6.3 Numerical Integration by Taylor Series	327
6.4 Error Estimates and Convergence of Euler's Method	332
6.5 Runge-Kutta Methods	336
6.6 Multistep Formulas	340
6.7 Predictor-Corrector Methods	346
6.8 The Adams-Moulton Method	350
6.9 Stability of Numerical Methods	357
6.10 Round-off-error Propagation	361
6.11 Systems of Differential Equations	365
<b>7. Boundary-value Problems in Ordinary Differential Equations</b>	<b>373</b>
7.1 Finite-difference Methods: Second-order Equations	374
7.2 Finite-difference Methods: Fourth-order Equations	379
7.3 Shooting Methods	382
