

CONTENTS

INTRODUCTORY REMARKS	Page 1
--------------------------------	-----------

CHAPTER I

INTRODUCTION

1. The Continuum of Numbers	5
2. The Concept of Function	14
3. More Detailed Study of the Elementary Functions	22
4. Functions of an Integral Variable. Sequences of Numbers	27
5. The Concept of the Limit of a Sequence	29
6. Further Discussion of the Concept of Limit	38
7. The Concept of Limit where the Variable is Continuous	46
8. The Concept of Continuity	49

APPENDIX I

Preliminary Remarks	56
1. The Principle of the Point of Accumulation and its Applications	58
2. Theorems on Continuous Functions	63
3. Some Remarks on the Elementary Functions	68

APPENDIX II

1. Polar Co-ordinates	71
2. Remarks on Complex Numbers	73

CHAPTER II

THE FUNDAMENTAL IDEAS OF THE INTEGRAL AND DIFFERENTIAL CALCULUS

1. The Definite Integral	76
2. Examples	82

CONTENTS

	Page
3. The Derivative	88
4. The Indefinite Integral, the Primitive Function, and the Fundamental Theorems of the Differential and Integral Calculus .	109
5. Simple Methods of Graphical Integration	119
6. Further Remarks on the Connexion between the Integral and the Derivative	121
7. The Estimation of Integrals and the Mean Value Theorem of the Integral Calculus	126

APPENDIX

1. The Existence of the Definite Integral of a Continuous Function	131
2. The Relation between the Mean Value Theorem of the Differential Calculus and the Mean Value Theorem of the Integral Calculus	134

CHAPTER III

DIFFERENTIATION AND INTEGRATION OF THE
ELEMENTARY FUNCTIONS

1. The Simplest Rules for Differentiation and their Applications .	136
2. The Corresponding Integral Formulæ	141
3. The Inverse Function and its Derivative	144
4. Differentiation of a Function of a Function	153
5. Maxima and Minima	158
6. The Logarithm and the Exponential Function	167
7. Some Applications of the Exponential Function	178
8. The Hyperbolic Functions	183
9. The Order of Magnitude of Functions	189

APPENDIX

1. Some Special Functions	196
2. Remarks on the Differentiability of Functions	199
3. Some Special Formulæ	201

CHAPTER IV

FURTHER DEVELOPMENT OF THE INTEGRAL
CALCULUS

1. Elementary Integrals	205
2. The Method of Substitution	207

CONTENTS

xi

	Page
3. Further Examples of the Substitution Method - - - -	214
4. Integration by Parts - - - - -	218
5. Integration of Rational Functions - - - - -	226
6. Integration of Some Other Classes of Functions - - - -	234
7. Remarks on Functions which are not Integrable in Terms of Elementary Functions - - - - -	242
8. Extension of the Concept of Integral. Improper Integrals - -	245

APPENDIX

The Second Mean Value Theorem of the Integral Calculus - -	256
--	-----

CHAPTER V

APPLICATIONS

1. Representation of Curves - - - - -	258
2. Applications to the Theory of Plane Curves - - - - -	267
3. Examples - - - - -	287
4. Some very Simple Problems in the Mechanics of a Particle - -	292
5. Further Applications: Particle sliding down a Curve - - -	299
6. Work - - - - -	304

APPENDIX

1. Properties of the Evolute - - - - -	307
2. Areas bounded by Closed Curves - - - - -	311

CHAPTER VI

TAYLOR'S THEOREM AND THE APPROXIMATE EXPRESSION OF FUNCTIONS BY POLYNOMIALS

1. The Logarithm and the Inverse Tangent - - - - -	315
2. Taylor's Theorem - - - - -	320
3. Applications. Expansions of the Elementary Functions - -	326
4. Geometrical Applications - - - - -	331

APPENDIX

	Page
1. Example of a Function which cannot be expanded in a Taylor Series - - - - -	336
2. Proof that e is Irrational - - - - -	336
3. Proof that the Binomial Series Converges - - - - -	337
4. Zeros and Infinities of Functions, and So-called Indeterminate Expressions - - - - -	338

CHAPTER VII

NUMERICAL METHODS

Preliminary Remarks - - - - -	342
1. Numerical Integration - - - - -	342
2. Applications of the Mean Value Theorem and of Taylor's Theorem. The Calculus of Errors - - - - -	349
3. Numerical Solution of Equations - - - - -	355

APPENDIX

Stirling's Formula - - - - -	361
------------------------------	-----

CHAPTER VIII

INFINITE SERIES AND OTHER LIMITING PROCESSES

Preliminary Remarks - - - - -	365
1. The Concepts of Convergence and Divergence - - - - -	366
2. Tests for Convergence and Divergence - - - - -	377
3. Sequences and Series of Functions - - - - -	383
4. Uniform and Non-uniform Convergence - - - - -	386
5. Power Series - - - - -	398
6. Expansion of Given Functions in Power Series. Method of Undetermined Coefficients. Examples - - - - -	404
7. Power Series with Complex Terms - - - - -	410

APPENDIX

1. Multiplication and Division of Series - - - - -	415
2. Infinite Series and Improper Integrals - - - - -	417
3. Infinite Products - - - - -	419
4. Series involving Bernoulli's Numbers - - - - -	422

CONTENTS

xiii

CHAPTER IX

FOURIER SERIES

	Page
1. Periodic Functions - - - - -	425
2. Use of Complex Notation - - - - -	433
3. Fourier Series - - - - -	437
4. Examples of Fourier Series - - - - -	440
5. The Convergence of Fourier Series - - - - -	447

APPENDIX

Integration of Fourier Series - - - - -	455
---	-----

CHAPTER X

A SKETCH OF THE THEORY OF FUNCTIONS OF SEVERAL VARIABLES

1. The Concept of Function in the Case of Several Variables - - - - -	458
2. Continuity - - - - -	463
3. The Derivatives of a Function of Several Variables - - - - -	466
4. The Chain Rule and the Differentiation of Inverse Functions - - - - -	472
5. Implicit Functions - - - - -	480
6. Multiple and Repeated Integrals - - - - -	486

CHAPTER XI

THE DIFFERENTIAL EQUATIONS FOR THE SIMPLEST TYPES OF VIBRATION

1. Vibration Problems of Mechanics and Physics - - - - -	502
2. Solution of the Homogeneous Equation. Free Oscillations - - - - -	504
3. The Non-homogeneous Equation. Forced Oscillations - - - - -	509
4. Additional Remarks on Differential Equations - - - - -	519
SUMMARY OF IMPORTANT THEOREMS AND FORMULÆ - - - - -	529
MISCELLANEOUS EXAMPLES - - - - -	549
ANSWERS AND HINTS - - - - -	571
INDEX - - - - -	611
