

CONTENTS

CHAPTER 1	INTRODUCTION	1
1.1	Why numerical integration?	1
1.2	Formal differentiation and integration on computers	2
1.3	Numerical integration and its appeal in mathematics	3
1.4	Limitations of numerical integration	3
1.5	The Riemann integral	4
1.6	Improper integrals	6
1.7	The Riemann integral in higher dimensions	7
1.8	More general integrals	9
1.9	The smoothness of functions and approximate integration	10
1.10	Weight functions	11
1.11	Some useful formulas	11
CHAPTER 2	APPROXIMATE INTEGRATION OVER A FINITE INTERVAL	15
2.1	Primitive rules	15
2.2	Simpson's rule	19
2.3	Nonequally spaced abscissas	22
2.4	Compound rules	24
2.5	Integration formulas of interpolatory type	27
2.6	Integration formulas of open type	32
2.7	Integration rules of Gauss type	33
2.8	Integration rules, using derivative data	52
2.9	Integration of periodic functions	53
2.10	Integration of rapidly oscillatory functions	59

	2.11	Contour integrals	69
	2.12	Improper integrals	71
	2.13	Indefinite integration	80
CHAPTER	3	APPROXIMATE INTEGRATION OVER INFINITE INTERVALS	89
	3.1	Change of variable	89
	3.2	Proceeding to the limit	90
	3.3	Truncation of the infinite interval	91
	3.4	Primitive rules for the infinite interval	91
	3.5	Formulas of interpolatory type	94
	3.6	Gaussian formulas for the infinite interval	95
	3.7	Convergence of formulas of Gauss type for singly and doubly infinite intervals	97
	3.8	Oscillatory integrands	99
CHAPTER	4	ERROR ANALYSIS	102
	4.1	Types of error	102
	4.2	Roundoff error for a fixed integration rule	103
	4.3	Truncation error through Peano's theorem	108
	4.4	Special devices	112
	4.5	Error estimates through differences	113
	4.6	Error estimates through the theory of analytic functions	115
	4.7	Error estimates through functional analysis	120
	4.8	Errors for integrands with low continuity	122
CHAPTER	5	APPROXIMATE INTEGRATION IN TWO OR MORE DIMENSIONS	125
	5.1	Introduction	125
	5.2	Some elementary multiple integrals over standard regions	126
	5.3	Change of order of integration	127

5.4	Change of variables	127
5.5	Decomposition into elementary regions	129
5.6	Cartesian products and product rules	130
5.7	Rules exact for monomials	135
5.8	Compound rules	141
5.9	Multiple integration by sampling	142
CHAPTER 6	AUTOMATIC INTEGRATION	159
6.1	The goals of automatic integration	159
6.2	Some automatic integrators	162
6.3	Romberg integration	166
6.4	Automatic integration, using Tschebyscheff polynomials	171
6.5	Automatic integration in several variables	172
6.6	Concluding remarks	173
APPENDIX 1	<i>On the Practical Evaluation of Integrals</i> , Milton Abramowitz	175
APPENDIX 2	Some FORTRAN Programs	191
APPENDIX 3	Bibliography of ALGOL Procedures	200
APPENDIX 4	Bibliography of Tables	202
APPENDIX 5	Bibliography of Books and Articles	205
	INDEX	227
