Preface	v	
0	Introduction and preview	1
0.1	An example of a retarded functional differential equation	1
0.2	Solution operators	3
0.3	Synopsis	5
0.4	A few remarks on history	10
I	Linear autonomous RFDE	11
I.1	Prelude: a motivated introduction to functions of bounded variation	11
I.2	Linear autonomous RFDE and renewal equations	15
I.3	Solving renewal equations by Laplace transformation	23
I.4	Estimates for $\det \Delta(z)$ and related quantities	28
I.5	Asymptotic behaviour for $t \rightarrow \infty$	31
I.6	Comments	35
II	The shift semigroup	36
II.1	Introduction	36
II.2	The prototype problem	37
II.3	The dual space	40
II.4	The adjoint shift semigroup	41
II.5	The adjoint generator and the sun subspace	42
II.6	The prototype system	49
II.7	Comments	50
III	Linear RFDE as bounded perturbations	51
III.1	The basic idea, followed by a digression on weak* integration	51
III.2	Bounded perturbations in the sun-reflexive case	54
III.3	Perturbations with finite dimensional range	64
III.4	Back to RFDE	69

III.5	Interpretation of the adjoint semigroup	76
III.6	Equivalent description of the dynamics	78
III.7	Complexification	80
III.8	Remarks about the non-sun-reflexive case	89
III.9	Comments	94
IV	Spectral theory	95
IV.1	Introduction	95
IV.2	Spectral decomposition for eventually compact semigroups ...	96
IV.3	Delay equations	104
IV.4	Characteristic matrices, equivalence and Jordan chains	109
IV.5	The semigroup action on spectral subspaces for delay equations	123
IV.6	Comments	134
V	Completeness or small solutions?	135
V.1	Introduction	135
V.2	Exponential type calculus	137
V.3	Completeness	140
V.4	Small solutions	150
V.5	Precise estimates for $ \Delta(z)^{-1} $	158
V.6	Series expansions	166
V.7	Lower bounds and the Newton polygon	170
V.8	Noncompleteness, series expansions and examples	178
V.9	Arbitrary kernels of bounded variation	184
V.10	Comments	191
VI	Inhomogeneous linear systems	193
VI.1	Introduction	193
VI.2	Decomposition in the variation-of-constants formula	194
VI.3	Forcing with finite dimensional range	196
VI.4	RFDE	197
VI.5	Comments	200
VII	Semiflows for nonlinear systems	201
VII.1	Introduction	201
VII.2	Semiflows	202
VII.3	Solutions to abstract integral equations	208
VII.4	Smoothness	214
VII.5	Linearization at a stationary point	222
VII.6	Autonomous RFDE	231
VII.7	Comments	241

VIII	Behaviour near a hyperbolic equilibrium	242
VIII.1	Introduction	242
VIII.2	Spectral decomposition	243
VIII.3	Bounded solutions of the inhomogeneous linear equation	246
VIII.4	The unstable manifold	247
VIII.5	Invariant wedges and instability	253
VIII.6	The stable manifold	257
VIII.7	Comments	258
IX	The center manifold	259
IX.1	Introduction	259
IX.2	Spectral decomposition	260
IX.3	Bounded solutions of the inhomogeneous linear equation	262
IX.4	Modification of the nonlinearity	264
IX.5	A Lipschitz center manifold	265
IX.6	Contractions on embedded Banach spaces	267
IX.7	The center manifold is of class C^k	271
IX.8	Dynamics on and near the center manifold	276
IX.9	Parameter dependence	277
IX.10	A double eigenvalue at zero	280
IX.11	Comments	286
X	Hopf bifurcation	287
X.1	Introduction	287
X.2	The Hopf bifurcation theorem	287
X.3	The direction of bifurcation	292
X.4	Comments	301
XI	Characteristic equations	302
XI.1	Introduction: an impressionistic sketch	302
XI.2	The region of stability in a parameter plane	305
XI.3	Strips	312
XI.4	Case studies	317
XI.5	Comments	338
XII	Time-dependent linear systems	339
XII.1	Introduction	339
XII.2	Evolutionary systems	340
XII.3	Time-dependent linear RFDE	343
XII.4	Invariance of X^\odot : a counterexample and a sufficient condition	345
XII.5	Perturbations with finite dimensional range	348
XII.6	Comments	354

XIII	Floquet Theory	355
XIII.1	Introduction	355
XIII.2	Preliminaries on periodicity and a stability result	356
XIII.3	Floquet multipliers	358
XIII.4	Floquet representation on eigenspaces	360
XIII.5	Comments	363
XIV	Periodic orbits	364
XIV.1	Introduction	364
XIV.2	The Floquet multipliers of a periodic orbit	365
XIV.3	Poincaré maps	368
XIV.4	Poincaré maps and Floquet multipliers	372
XIV.5	Comments	376
XV	The prototype equation for delayed negative feedback: periodic solutions	379
XV.1	Delayed feedback	379
XV.2	Smoothness and oscillation of solutions	382
XV.3	Slowly oscillating solutions	385
XV.4	The a priori estimate for unstable behaviour	391
XV.5	Slowly oscillating solutions which grow away from zero, periodic solutions	399
XV.6	Estimates, proof of Theorem 5.5(i) and (iii)	408
XV.7	The fixed-point index for retracts in Banach spaces, Whyburn's lemma	412
XV.8	Proof of Theorem 5.5(ii) and (iv)	415
XV.9	Comments	421
XVI	On the global dynamics of nonlinear autonomous differential delay equations	426
XVI.1	Negative feedback	426
XVI.2	A limiting case	430
XVI.3	Chaotic dynamics in case of negative feedback	439
XVI.4	Mixed feedback	441
XVI.5	Some global results for general autonomous RFDE	442
Appendices		
I	Bounded variation, measure and integration	443
I.1	Functions of bounded variation	443
I.2	Abstract integration	446

II	Introduction to the theory of strongly continuous semigroups of bounded linear operators and their adjoints	452
II.1	Strongly continuous semigroups	452
II.2	Interlude: absolute continuity	458
II.3	Adjoint semigroups	460
II.4	Spectral theory and asymptotic behaviour	468
III	The operational calculus	474
III.1	Vector-valued functions	474
III.2	Bounded operators	476
III.3	Unbounded operators	477
IV	Smoothness of the substitution operator	482
V	Tangent vectors, Banach manifolds and transversality	492
V.1	Tangent vectors of subsets of Banach spaces	492
V.2	Banach manifolds	492
V.3	Submanifolds and transversality	494
VI	Fixed points of parameterized contractions	497
VII	Linear age-dependent population growth: elaboration of some of the exercises	500
VIII	The Hopf bifurcation theorem	505
	References	514
	Index	530
	List of symbols	533
	List of notation	533
