

TABLE OF CONTENTS

Preface	ix
---------	-------	----

PART ONE Fundamental Theory

Chapter 1	<u>The two-dimensional Laplace transform</u>	3
1.	The Laplace integral	3
2.	The region of convergence	8
3.	Uniformly bounded convergence	11
4.	Absolute convergence	13
5.	Properties of the Laplace integral	14
6.	Convolutions	26
7.	The inversion theorem	32
Chapter 2	<u>Basic Definitions and Theorems of the operational calculus in two variables and its applications</u>	39
1.	The similarity rule and the shift rule	40
2.	The images of integrals and derivatives. The multiplication rule	40
3.	Linear combinations of the variables p and q	43
4.	Functions of functions	46
5.	The image of the function $f(x + y)$	47
6.	The image of the function $f(x - y)$	49
7.	The image of the function $f(xy)$	50
8.	The image of the function $Jl_0(2\sqrt{xy})$	50
9.	The image of the function $\frac{1}{\sqrt{\pi(x+y)}} f\left(\frac{xy}{x+y}\right)$	51
10.	The images of the Kelvin functions	54
11.	The image of a function of the product and quotient of the arguments	55
12.	The original of $F\left(\frac{1}{p}, \frac{1}{q}\right)$	58
13.	The original of $F(\sqrt{p}, \sqrt{q})$	59
14.	The image of the function $f(\sqrt{x^2 + y^2})$	62

CONTENTS

15.	Laguerre polynomials	63
16.	The evaluation of integrals	65
17.	Differential equations	69

PART TWO

Tables of Formulæ

Explanation of the tables of formulæ	81
List of notations for the special functions and some constants	82
List of fundamental operational relations	90
Tables	100
Rational functions	100
Irrational functions	126
Exponential functions	141
Logarithmic functions	146
Hyperbolic and inverse hyperbolic functions	149
Cylinder functions	150
Integral functions	153
Confluent hypergeometric functions	155
Miscellaneous functions	161
References	163
