CHAPTER		PAGE
1 FITTING A STRAIGHT LINE BY LEAST SQUARES		1
1.0 Introduction: The Need for Statistical Analysis		1
1.1 Straight Line Relationships between Two Variables		5
1.2 Linear Regression: Fitting a Straight Line		8
1.3 The Precision of the Estimated Regression		17
1.4 Examining the Regression Equation		22
1.5 Lack of Fit and Pure Error		33
1.6 The Correlation between X and Y		43
1.7 Inverse Regression (Straight Line Case)		47
1.8 Some Practical Implications of Chapter 1		51
Exercises		55
2 THE MATRIX APPROACH TO LINEAR REGRESSION		70
2.0 Introduction		70
2.1 Fitting a Straight Line in Matrix Terms: The Estimates of β_0 and β_1		70
2.2 The Analysis of Variance in Matrix Terms		80
2.3 The Variances and Covariance of b_0 and b_1 from the Matrix Calculation		82
2.4 Variance of \hat{Y} Using the Matrix Development		83
2.5 Summary of Matrix Approach to Fitting a Straight Line		84
2.6 The General Regression Situation		85
2.7 The "Extra Sum of Squares" Principle		97
2.8 Orthogonal Columns in the X -Matrix		98
2.9 Partial F -Tests and Sequential F -Tests		101
2.10 Testing a General Linear Hypothesis in Regression Situations		102
2.11 Weighted Least Squares		108
2.12 Bias in Regression Estimates		117
2.13 Restricted Least Squares		122
2.14 Some Notes on Errors in the Predictors (As Well as in the Response)		122
2.15 Inverse Regression (Multiple Predictor Case)		125
Appendix 2A Selected Useful Matrix Results		126
Appendix 2B Expected Value of Extra Sum of Squares		128

xii CONTENTS

Appendix 2C How Significant Should My Regression Be?	129
Appendix 2D Lagrange's Undetermined Multipliers	134
Exercises	136
3 THE EXAMINATION OF RESIDUALS	141
3.0 Introduction	141
3.1 Overall Plot	142
3.2 Time Sequence Plot	145
3.3 Plot Against \hat{Y}_i	147
3.4 Plot Against the Predictor Variables X_{ji} , $i = 1, 2, \dots, n$	148
3.5 Other Residuals Plots	149
3.6 Statistics for Examination of Residuals	150
3.7 Correlations among the Residuals	151
3.8 Outliers	152
3.9 Serial Correlation in Residuals	153
3.10 Examining Runs in the Time Sequence Plot of Residuals	157
3.11 The Durbin-Watson Test for a Certain Type of Serial Correlation	162
3.12 Detection of Influential Observations	169
Appendix 3A. Normal and Half-Normal Plots	177
Exercises	183
4 TWO PREDICTOR VARIABLES	193
4.0 Introduction	193
4.1 Multiple Regression with Two Predictor Variables as a Sequence of Straight-Line Regressions	196
4.2 Examining the Regression Equation	204
Exercises	212
5 MORE COMPLICATED MODELS	218
5.0 Introduction	218
5.1 Polynomial Models of Various Orders in the X_j	219
5.2 Models Involving Transformations Other Than Integer Powers	221
5.3 Families of Transformations	225
5.4 The Use of "Dummy" Variables in Multiple Regression	241
5.5 Centering and Scaling; Performing the Regression in Correlation Form	257
5.6 Orthogonal Polynomials	266
5.7 Transforming X Matrices to Obtain Orthogonal Columns	275
5.8 Regression Analysis of Summary Data	278
Exercises	280

6 SELECTING THE "BEST" REGRESSION EQUATION	294
6.0 Introduction	294
6.1 All Possible Regressions	296
6.2 "Best Subset" Regression	303
6.3 The Backward Elimination Procedure	305
6.4 The Stepwise Regression Procedure	307
6.5 A Drawback to Understand but not be Overly Concerned About	311
6.6 Variations on the Previous Methods	312
6.7 Ridge Regression	313
6.8 PRESS	325
6.9 Principal Component Regression	327
6.10 Latent Root Regression	332
6.11 The Stagewise Regression Procedure	337
6.12 Summary	341
6.13 Computational Method for Stepwise Regression	342
6.14 Robust Regression	342
6.15 Some Comments on Statistical Computer Packages	344
Appendix 6A Canonical Form of Ridge Regression	349
Exercises	352
7 TWO SPECIFIC PROBLEMS	380
7.0 Introduction	380
7.1 The First Problem	380
7.2 Examination of the Data	381
7.3 Choosing the First Variable to Enter Regression	383
7.4 Construction of New Variables	386
7.5 The Addition of a Cross-Product Term to the Model	386
7.6 Enlarging the Model	388
7.7 The Second Problem. Worked Examples of Second-Order Surface Fitting for $k = 3$ and $k = 2$ Variables	390
Exercises	404
8 MULTIPLE REGRESSION AND MATHEMATICAL MODEL BUILDING	412
8.0 Introduction	412
8.1 Planning the Model Building Process	414
8.2 Development of the Mathematical Model	418
8.3 Validation and Maintenance of the Mathematical Model	419
9 MULTIPLE REGRESSION APPLIED TO ANALYSIS OF VARIANCE PROBLEMS	423
9.0 Introduction	423
9.1 The One-Way Classification: An Example	424
9.2 Regression Treatment of the One-Way Classification Example	427

xiv CONTENTS

9.3 The One-Way Classification	431
9.4 Regression Treatment of the One-Way Classification Using the Original Model	432
9.5 Regression Treatment of the One-Way Classification: Independent Normal Equations	437
9.6 The Two-Way Classification with Equal Numbers of Observations in the Cells: An Example	439
9.7 Regression Treatment of the Two-Way Classification Example	441
9.8 The Two-Way Classification with Equal Numbers of Observations in the Cells	445
9.9 Regression Treatment of the Two-Way Classification with Equal Numbers of Observations in the Cells	447
9.10 Example: The Two-Way Classification	451
9.11 Comments	453
Exercises	454
10 AN INTRODUCTION TO NONLINEAR ESTIMATION	458
10.0 Introduction	458
10.1 Least Squares in the Nonlinear Case	459
10.2 Estimating the Parameters of a Nonlinear System	462
10.3 An Example	475
10.4 A Note on Reparameterization of the Model	488
10.5 The Geometry of Linear Least Squares	489
10.6 The Geometry of Nonlinear Least Squares	500
10.7 Nonlinear Growth Models	505
10.8 Nonlinear Models: Other Work	513
Exercises	517
NORMAL DISTRIBUTION	530
PERCENTAGE POINTS OF THE <i>t</i>-DISTRIBUTION	532
PERCENTAGE POINTS OF THE <i>F</i>-DISTRIBUTION	533
ANSWERS TO EXERCISES	537
APPENDIX A	611
APPENDIX B	629
APPENDIX C	661
BIBLIOGRAPHY	675
INDEX	701
