

TABLE OF CONTENTS

	Page
Chapter I ELEMENTARY METHODS FOR ORDINARY DIFFERENTIAL EQUATIONS OF FIRST ORDER	1
1. Examples and classification	2
2. Linear equations	7
3. Separable equations	19
Chapter II UNIQUENESS AND LIPSCHITZ CONDITIONS FOR ORDINARY DIFFERENTIAL EQUATIONS	26
4. First order scalar equations	27
5. Systems of equations	40
6. Higher order equations	51
7. Complex solutions	63
8. A valuable lemma	72
9. A boundary value problem	78
Chapter III THE LINEAR EQUATION OF ORDER n	84
10. Constant coefficients (the homogeneous case)	85
11. Linear independence and Wronskians	98
12. Constant coefficients (general solution for simple h)	109
13. Variation of parameters	124
Chapter IV LINEAR ORDINARY DIFFERENTIAL SYSTEMS	139
14. Some general properties	140
15. Constant coefficients	150
16. Oscillations and damping in applications	168
17. Variation of parameters	180
18. Matrix norm	189
*19. Matrix exponential	197
20. Existence of solutions (successive approximations)	212

	Page
Chapter V INTRODUCTION TO DELAY DIFFERENTIAL EQUATIONS	225
21. Examples and the method of steps	226
22. Some distinguishing features and some "wrong" questions	245
23. Lipschitz condition and uniqueness	255
Chapter VI EXISTENCE THEORY	268
24. Ordinary differential systems	269
25. Systems with bounded delays: notation and uniqueness	285
26. Systems with bounded delays: existence	299
Chapter VII LINEAR DELAY DIFFERENTIAL SYSTEMS	313
27. Superposition	314
28. Constant coefficients	319
29. Variation of parameters	331
Chapter VIII STABILITY	340
30. Definitions and examples	341
31. Lyapunov method for uniform stability	352
32. Asymptotic stability	362
33. Linear and quasi-linear ordinary differential systems	374
34. Linear and quasi-linear delay differential systems	384
Chapter IX AUTONOMOUS ORDINARY DIFFERENTIAL SYSTEMS	400
35. Trajectories and critical points	401
36. Linear systems of second order	414
37. Critical points of quasi-linear systems of second order	424
38. Global behavior for some nonlinear examples	431
APPENDICES	
1. Notation for sets, functions and derivatives	449

	Page
APPENDICES	
2. Some theorems from calculus	454
REFERENCES	466
ANSWERS AND HINTS	476
